2019

NEBULA

Designed as a series of high-performance lure fishing rods that give the bass and general lure angler as much as possible for their money. This series has been described by some as the best value lure fishing rod ever, and who are we to argue! Each blank has been developed to extrude the ultimate in performance with accurate casting and greater control over how lures are worked at the business end.

Despite its price, the Nebula range does not scrimp on quality materials. Each blank is made from high-volume 40T Japanese carbon, which makes for a strong and lightweight blank. They are rung with quality Fuji Stainless Alconite K Spinning Guides and each are fitted with a Fuji VSS reel seat for comfort when working lures for long periods.

A stunning dark, gunmetal colouration with black whippings and silver accents produces a striking look. A textured blank gives it a grippy matt finish.

There are three versions to the Nebula range. The SP is a short butt, long tipped range of rods designed for boat and shore fishing, with an emphasis on inshore reef and wreck fishing with soft plastics. Our general range comes in eight versions and feature extra fast action blanks for highly accurate casting and lure working. The Nebula Travel is designed for the travelling angler who needs a compact rod that doesn't compromise on performance.

- High performance lure fishing rods at a sensible price.
- Full Fuji Fittings throughout including guides and reel seats.
- Stunning dark, gunmetal colour scheme.
- A rod for most lure fishing situations from shore and boat.

NEBULA

CODE	LENGTH	CASTING	SECTIONS	WEIGHT

HNEB27TM	2.7m - 8'10"	7-35g	4	138g

Produced with extra fast action blanks that have rapid recovery for long range casting and high accuracy. These rods put lures exactly where they are intended to go, time after time. The extra fast action is stiff and when using low stretch lines like braid, will make lures react with intensity with the smallest of moments, triggering the predatory instincts of any fish in the area.

NEBULA ML 2.1M - 5-22G

The shortest rod in the range that packs a mighty punch with a casting rating of 5-22g. The ideal choice for targeting a big wrasse from rough ground or for lure fishing from the boat. Is also ideal for use in freshwater and great for fishing in tight areas, especially when "combat fishing" rivers for salmon and sea trout where casting space is at a premium.

NEBULA M 2.3M - 7-28G

A stunning rod with a casting rating of 7 – 28g. It lends itself well for fishing both hard and soft baits from either boat or shore. A versatile rod with many applications that will become a firm favourite.

NEBULA M 2.4M - 7-30G

Eight-foot rods are one of the most popular lengths of lure fishing rods. A go to for many anglers. With a casting rating of 7 to 30g this will fit the needs of lure anglers fishing from rocks, estuaries or the open shingle.

NEBULA M 2.7M - 7-35G

At nine feet, this is an all-round shore fishing lure rod. Casting 7 to 35g it's the perfect tool for fishing weightless soft plastics or hard baits.

NEBULA MH 2.7M - 12-42G

A more powerful nine-foot rod, capable of casting between 12 and 42g! If you're looking for a rod that has immense power to blast lures out to the horizon or need a rod to tackle heavy sea conditions, this is for you.

NEBULA H 2.9M - 7-35G

A longer rod designed to cast those lighter hard lures up to 35g to distance, the extra length also helps the angler to steer fish around snags and structures.

NEBULA MH 3.0M - 12-42G

A rod designed for long distance casting with lures up to 42g, designed to be slightly softer in action compared to other Nebula rods, this is a rod ideally suited to fishing for bass on open surf beaches.

NEBULA H 3.0M - 15-56G

The big beast of the pack! This 9ft 10inch rod is capable of casting lures from 15 to 56g. It has immense power and is the go-to rod for fishing at extreme distance or in very rough sea conditions, where you need extra power.

NEBULA TRAVEL M 2.7M - 7-35G

A four-piece blank that allows the angler to take the same fast action, long range casting, highly accurate Nebula around the world! Designed to fit into a standard suitcase, unlike some multi-sectioned rods, the Nebula Travel does not have to be a compromise on performance. It acts, casts and works lures to the same standard as our two-piece versions. At 2.7m it is the perfect, all round rod, that can tackle almost everything lure fishing, wherever the angler finds themselves. The perfect travelling companion for the worldwide angler or the angler looking to keep some compact kit in their car for those impromptu sessions.

HTO RODS

NEBULA-SP

NEBULA SP

CODE	LENGTH	CASTING	SECTIONS	WEIGHT
HNSP22ML	2.2m - 7'3"	10-36g - Vert. to 100g	1+1	140g
HNSP25MH	2.5m - 8'2"	10-42g - Vert. to 160g	1+1	175g

A Nebula rod with a slightly more progressive action compared to the other rods in the range. This short butt, long tip configuration rod maintains a crisp and responsive blank, ideal for fishing with soft plastics from the boat or shore. The long tip helps to maintain a truer, more accurate power curve to cast with more efficiency, work lures better and fight fish with optimum performance.

The blank blends from a soft but powerful tip through to a very powerful butt section which is ideal for casting soft plastics to distance but also for playing hard fighting fish, especially from a boat. The tip has been designed to work soft plastic lures either when cast away from or fished vertically from a boat, and when worked from the shore too.

An excellent rod for working soft plastics lures such as swim baits and jig heads for powerful species such as bass, pollack and wrasse. The Nebula SP comes with a full length EVA grip on the butt section.

SHORE GAME

SHORE GAME

CODE	LENGTH	CASTING	SECTIONS	WEIGHT
HSGA88	2.64m - 8'8"	7-28g	2	119g
HSGA93	2.82m - 9'3"	7-30g	2	140g
HSGA96	2.9m - 9'6"	7-35g	2	144g

Designed with bass fishing in mind, the Shore Game range is a series of light, strong and highly responsive blanks that have been designed to work lures in the most challenging conditions and at range. The lightweight blanks promote use over longer periods and help to reduce fatigue when extensively working lures. Built from the best materials, this is the ultimate bass lure fishing rod, designed for European bass fishing.

Built from 40T Japanese Carbon from Mitsubishi, the blank has a Quattro Grid X Weave Wrap carbon scrim, designed to protect the underlying areas of the rod to produce an exceptionally strong blank. This carbon is also super volume, packing a very high density into a super slim blank. A rod of this stature needs the best fittings to maintain this lightness, we've fitted lightweight Fuji Titanium Torzite Guides, an ultra-strong guide designed to reduce line twist for accurate casting and increased distance and a quality Fuji VSS reel seat.

A super cool, head turning look finishes off the rod in style. The black and gunmetal finish throughout complimented by the stunning Fuji Titanium Torzite guides sets this rod apart. It comes alive in the sunlight, mimicking a silver mirage look that has to be seen to be believed. The rod features delicate, subdued livery.

SHORE GAME 8FT 8IN 7-28G

The pinnacle of shore bass rods when a little more finesse is needed around light surf venues and estuary mouths. The rod is designed to be highly accurate with a good recovery and to be as responsive as possible. This combines to give the angler the feedback they need when working lures for a truly sensational lure angling experience.

SHORE GAME 9FT 3IN 7-30G

Sitting perfectly in the middle of the range, this rod gives the accuracy of the shorter rod, with a little bit of extra length and power to cast lures as far as possible. The rod features an upgraded butt cap, a thicker EVA handle and an improved Fuji VSS reel seat arrangement with EVA at the back for comfort.

SHORE GAME 9FT 6IN 7-35G

A true distance tool that can punch out lures to where the fish are feeding. The light and responsive blank works with the angler to transmit a truly authentic action to lures at distance. The extra length of the 96MLM gives it the power to cast to distance but also to negotiate a feisty fish around snags and structures.

URBAN FINESSE

URBAN FINESSE

CODE	LENGTH	CASTING	SECTIONS
HRUFL	2.1m - 6'11"	4-17g	2
HRUFUL	2.1m - 6'11"	2-12g	2
HRUFSUL	1.98m - 6'6"	0.5-5g	2

A trio of head turning, modern ultralight rods for the street and LRF angler. These stunning rods feature a cool, urban camo colour scheme designed to appeal to the fashion-conscious light game angler. Under the hood, these rods are serious fishing tools designed with the specific actions required for fishing with light lures from plugs to metals to soft plastics. The tips on each rod are super sensitive, so the angler can work lures effectively, knowing exactly what it is going on at the business end. The tip blends into a more powerful butt section to help with casting and when playing fish.

All rods feature quality fittings including K spinning guides. The two lighter models are fitted with an appealing skeleton reel seat for a minimalist look and to blend in well with smaller, lighter reels, they also with an urban camo EVA rear butt grip. The heavier model is fitted with a VSS style real seat, for comfort when fishing with larger reels. The lighter rods have hi-vis white tips with the heavier rod featuring an orange accent on the tip ring for low visibility fishing situations.

- Stunning, modern blanks designed for ultralight fishing.
- Modern urban camo designed to meet current trends.
- K Style Spinning Guides.
- Skeleton reel seat on lighter models and full VSS on heavier model.

GLIDE WALKER

GLIDE WALKER

CODE	LENGTH	CASTING	SECTIONS
HRGW27MH	2.65m - 8'8"	12-42g	2
HRGW27M	2.65m - 8'8"	10-30g	2
HRGW27ML	2.65m - 8'8"	5-28g	2

A range of bass lure fishing rods that have been designed for the angler who will be fishing with surface lures predominantly. The fast action blank has been developed to cast surface lures to distance, with a high degree of accuracy. This fast blank allows the angler to transmit as much action as possible to the lure with less movements on the rod, especially when fishing with braided lines. Ideal for fishing with all types of surface action from walking the dog to more extreme popping motions. Each rod is finished with a dark grey, black and silver colour scheme, special attention to detail around the reel seat gives this rod a modern look usually found on much more expensive rods. Each tip ring has an orange accent, ideal when fishing in low visibility conditions. A VSS reel seat securely holds the reel in place while K Style Spinning Guides ensure trouble free, efficient casting of surface lures.

- Modern lure rod designed for surface lure fishing.
- Fast action blank for long, accurate casting.
- Designed to work surface lures with minimum effort.
- Stunning looks.
- Fitted with K Style Spinning Guides and modern VSS Reel Seat.

HOOLIGAN

CODE	LENGTH	CASTING	SECTIONS
HRH027M	2.65m - 8'8"	7-35g	2
HRH027MH	2.65m - 8'8"	12-42g	2
HRH024M	2.4m - 7'10"	7-35g	2
HRH024L	2.4m - 7'10"	5-25g	2

A well-priced, value range of lure fishing rods that have modern, fast actions designed to get the most out of all types of lures. This all-round range features four rods to cover the use of lures from 5 to 42g. The fast action blanks lend themselves to casting good distances, accurately and bringing life to lures, with minimal effort. A fantastic range of rods that is perfect for lure fishing for bass, pollack, wrasse, pike, zander and perch. All rods are finished in a black, grey and silver colour scheme with an orange accent on the tip ring, ideal when fishing in low visibility conditions. All models come with K style guides and a VSS reel seat. The perfect range of rods for beginners looking to get into lure fishing and for anglers on a budget, who want a modern style, lightweight lure rod at a low price.

- Modern. Lightweight, fast action blank for long, accurate casting.
- All-round lure rods designed for working all types of lure.
- Four models to cover ever eventuality.
- Stunning looks, K Style Guides and CSS Reel Seat.

ROCKFISH

ROCKFISH '19

CODE	LENGTH	CASTING	SECTIONS	WEIGHT
HR19UL	1.98m - 6'6"	1-7g	2	84g
HR19L	2.13m - 7'0"	3-15g	2	102g
HR19MH	2.44m - 8'0"	5-20g	2	126g
HR19H	2.60m - 8'6"	5-28g	2	136g

The original Rockfish range was one of our most successful rod launches, the first range of rods designed in the UK for LRF fishing at a sensible price for all. Our refreshed 2019 range of Rockfish rods have been overhauled completely, redesigned to better cater for modern trends, with a stunning new look and at a lower price!

Featuring perfect actions for fishing with a wide range of ultralight lures and tactics, good quality fittings and a modern look, it is hard to find an LRF rod that can match the HTO Rockfish range. Each rod is two-piece and built from IM7 Carbon and rung with quality single leg SIC guides and features a VSS style screw winch seat and EVA handle. Orange accents around the reel seat and butt stand out against the dark, grey blank and black whippings. The tip ring features an orange accent to help with visibility in darker fishing conditions on all rods except the UL, which has a white tip section.

The Rockfish 19 UL rods come with solid tips which are fantastic for fishing with jig heads "on the drop" and for reducing the resistance felt by species that inhale a bait. The fish can suck in a lure and the soft tip helps to reduce the resistance felt by the fish to induce confident takes.

The rest of the Rockfish 19 rods have tubular tips, these are good for applications where you need a stiffer tip such as when working small crankbaits or heavier metal lures. Tubular tipped rods tend to offer more feel than solid-tipped rods and are very good for bouncing jig heads along the bottom.

ROCKFISH 19 UL

This sensitive rod can detect shy biting gobies in deep water yet has reserves of power to land bigger fish.

ROCKFISH 19 L

Ideal when fishing in rougher weather conditions, deeper water, when tides can be a factor or when fishing above the water. The Light also has the power to land larger fish with confidence.

ROCKFISH 19 MH

The ideal choice for the novice rockfish angler wanting to target species such as wrasse, pollack and bass in heavier terrain.

ROCKFISH 19 H

The perfect choice when targeting hard fighting fish in rocky, snaggy terrain such as bigger ballan wrasse, pollack and bass.

ROCK ROVER

ROCK ROVER

CODE	LENGTH	CASTING	SECTIONS	WEIGHT
HRROV	2.1m - 6'11"	2-7g	4+1	99g

Designed for the travelling, ultra-light angler that can cast weights between 2 and 7g. It breaks down into 4 sections measuring 60cm and comes with both a solid and a tubular tip. It is small enough to fit in hand luggage ideal for taking on holiday or to keep in the car. The ideal rod for the roving angler who is walking miles to their chosen water, it packs down neat enough to fit in a drink's holder on a rucksack. It measures 6ft 11in when assembled. Coming with two tip styles, this eliminates the need for the angler to take two different rods on holiday with them, the one rod can do it all.

The Solid Tip has been designed to be used with jig heads on the drop and for reducing the resistance felt by species that inhale a bait. The soft tip provides very little resistance to the fish but will twitch and curve as a fish is playing with the bait. Ideal for shy biting fish.

The Tubular Tip has been designed for working smaller crankbaits and heavier metal lures. It offers you more feel and is great for bouncing jig heads along the bottom.

Our HTO Rock Rover has become a firm favourite with travelling and mobile anglers, it has caught some stunning fish from across the globe well into double figures, from hard fighting pike and zander in the UK to small tuna in warmer climes.

- Compact four section rod, ideal for fitting in a suitcase.
- Come with Solid and Tubular tips to cover all styles of LRF fishing.
- Plenty of power to land small, powerful fish at home and abroad.

FLIK STIK

FLIK STIK

CODE	LENGTH	CASTING	SECTIONS	WEIGHT
HFS43UL	1.37m - 4'6"	2-10g	1	81g

Make fishing fun again! This short, versatile, ultralight lure rod has been designed to bring the angler maximum enjoyment when fishing for various mini species, trout and perch. It has the perfect, through action for extracting maximum enjoyment during the fight but has enough steel to flick small lures across brooks, rivers and shorter distances on lakes. Its short length makes it the ideal rod for fishing in small rock pools and down the edge of sheltered areas of headlands and structures such as piers and jetties. The rod is rung with quality, single leg guides and comes in a good looking black and orange colour scheme, with the butt section all orange to the butt ring and each ring fixed to the blank with hot orange whipping. Ideal for anglers wanting some extra fun, beginners and youngsters just getting into light lure fishing.

- Through action for maximum enjoyment.
- Short length ideal for brooks, rivers, edge fishing and casting short distances.
- Lightweight and good looking, ideal for beginners and kids.

SLIZZLE JIZZLE

SLIZZLE JIZZLE

CODE	LENGTH	CASTING	SECTIONS	WEIGHT
HSLJ1	1.98m - 6'6"	up to 150g	1	153g
HSLJ2	1.98m - 6'6"	up to 230g	1	187g
HSLJ3	1.98m - 6'6"	up to 330g	1	242g

An entry range of rods designed specifically for anglers looking to get into slow jigging, a fashionable, exciting and growing branch of boat fishing. Each blank is constructed to be lightweight and with actions that have been specifically designed to work slow jigs effectively for long periods of time without fatigue. Rods are fitted with miniature K guides and a HTO trigger grip reel seat with an extended fore grip for maximum comfort and effective jigging. The parabolic action helps to work slow jigs correctly but also provides immense fun when a fish strikes. These rods will bend all the way, giving maximum enjoyment and some proper rod bending actions. Ideal rods for slow jigging with our extensive range of Slow Jigs for all manner of species from bass and pollack to gurnards and wrasse.

- Designed specifically for slow jig fishing.
- HTO Trigger Grip provides maximum comfort and leverage for working jigs.
- Parabolic action for maximum fun and correct jig working.

HTO REELS

ROCKFISH 2000

A super smooth, lightweight reel designed specifically for the light lure angler and for our HTO Rockfish 19 rods. It comes equipped with 5 stainless steel bearings, plus one roller bearing making these reels ultra-smooth when working lures and playing fish. A graphite body and rotor make these reels light but also corrosion resistant, ideal for fishing in both saltwater and freshwater. For strength and durability, a stainless steel main shaft ensures that the reel performs time and time again without letting the angler down. A one-way clutch system ensures that line leaves the reel smoothly when a fish takes. So the line does not twist when a fish is taking line or when retrieving line, a dual propulsion anti-twist line roller has been installed. The aluminium power handle finishes off the reel, this lightweight handle has been designed to be corrosion free and to apply maximum efficiency to the gears when playing a fish and retrieving.

- A super smooth, lightweight reel designed specifically for the light lure angler and for our HTO Rockfish 19 rods.
- 5.2:1 gear ratio and 5+1 bearings for a quick and smooth retrieve.
- Graphite body and rotor with aluminium handle for lightness. Stainless steel shaft for maximum durability.
- One-way clutch system for efficient, smooth line control when playing fish.
- Dual propulsion anti-twist line roller to eliminate line twist.

CODE	SIZE	BEARINGS	RATIO	WEIGHT
HRRR2	2000	5+1	5.2:1	-

LURE GAME HP

Designed for general lure fishing applications with braid and monofilament lines. It comes with 9+1 stainless steel bearings making it super smooth. The 5.1:1 retrieve helps to work lures effectively and has the speed to retrieve a lure quickly to recast over showing fish. To ensure there are no overruns when striking into a fish and to promote more positive hook holds, an instant anti-reverse has been included, this ensures the spool cannot rotate backwards. The drag is powerful and smooth and in testing has coped with bass all the way up to smoothhound and blue sharks without any problems.

A superb reel for casting all manner of lures from hard baits and metals to soft plastics.

- Powerful and fast 5.1:1 retrieve.
- 9+1 bearings for a super smooth retrieve.
- Lightweight reel with slim body designed and lightweight rotor.
- Instant anti-reverse to prevent overruns and positive hook ups.
- New spool lip design, for better casting performance.

CODE	SIZE	BEARINGS	RATIO	WEIGHT

HRLG30	3000	9+1	5.0:1	261g
HRLG40	4000	9+1	5.0:1	-

VENTURA BAITCASTER

A low-profile reel that has been designed for lure fishing from the outset. Baitcasters are the ideal choice when fishing with short rods, with trigger grips and require rapid, accurate casting with hard and soft baits. The reel comes with a thumb bar for immediate gear disengagement to quickly cast, it can be operated with one hand.

It comes with 10 ball bearings for extra smoothness and a fast 6.3:1 retrieve. The thumb bar is quickly operated and smooth, it will disengage quickly and engages with a simple turn of the handle. It comes with a level-wind to keep the line level on the spool, stopping bunching and aiding in casting longer distances.

Cast Control allows the speed of spool rotation to be adjusted using a dial on the side. This is ideal to tweak the spool speed based on the type of lures, rod or fishing situation. Cast Control makes it ideal for use by beginners, they can tweak the spool in increments as they get used to casting with a baitcasting reel.

- Super smooth and fast.
- Thumb bar spool disengagement for rapid casting.
- Cast Control to change the speed of the spool for casting.
- Great for fishing with shorter rods with trigger grips.
- Ideal for speed fishing.

HOOLIGAN

A low cost, entry level bass and lure fishing reel that is lightweight and smooth. Designed to complement our lower cost range of lure fishing rods. Featuring 5+1 stainless steel bearings, the reel is smooth when working lures and when playing fish. A precision drag ensures that the angler retains complete control over the pressure they are applying to a running fish. A perforated spool and graphite body help to reduce the weight of the reel, so it balances well with lighter lure rods. A strong, CNC machined handle is finished with an ergonomic, rubberised handle grip, that is comfortable and grippy with wet hands. A good quality, low cost lure fishing reel that is ideal for newcomers to lure fishing, kids and occasional lure anglers.

- Lightweight, corrosion resistant body.
- 5+1 stainless steel bearings for a smooth retrieve.
- Smooth, precise drag.

HTO LINES

X4 LIGHT GAME BRAID

Constructed from four strands of 100% UHMWPE fibre from Japan, our X4 Braid has been specifically designed for ultralight fishing. Four strand braids are tough and durable, ideal for when fishing around rocks and snags or through weed, fantastic for the light lure angler fishing down the sides of rocks, canal edges and around sharp and abrasive snags. Although four strand braids have a reputation for feeling rough, we've used cutting edge braid technology to weave each strand tighter, this gives the line a higher breaking strain for its diameter, makes it smoother than other four strand braids and also gives it a rounder profile. This rounder profile and lower diameter improves casting performance and maximises its sensitivity, giving the angler instant feedback.

- 100% UHMWPE from Japan.
- High breaking strain to diameter.
- Round, smooth profile for better casting and improved sensitivity.
- Designed specifically for light game anglers.

CODE	COLOUR	DIAMETER	BREAKING	LENGTH
HRX402P	Pink	0.08mm - 0.2PE	5lb	100m
HRX404P	Pink	0.10mm - 0.4PE	8lb	100m

TITANIUM LURE LEADER

The ultimate offering of durable, high strength lure leader for targeting predators with teeth such as pike and zander. Our Titanium Leaders are ultra-thin in diameter and are stronger than normal wire leaders. Titanium will spring back which aids casting and provides a natural lure presentation, this helps cast further and more accurately. It is more durable than standard wire so won't wear out when coming into contact with a predator's teeth, it is also hard to kink, making it more user friendly ensuring it will last cast after cast. Each leader is looped and crimped with shrink tubing over the top for security and safety and fitted with extra strong swivels from our sister brand Tronixpro and a quality Egg Snap.

CODE	COLOUR	BREAKING	LENGTH	QTY

HTLL30	Wire	30lb	30cm	2

LURE LEADER

Made from strong, hard wearing wire, these leaders are ideal for adding protection against sharp teeth and abrasive fish skin. Available in four different breaking strains, there is a leader available for any lure fishing eventuality either in the UK or abroad. Designed for fish with teeth and abrasive mouths such as pike and zander. Each leader has been looped and secured with crimps and shrink tube. They come fitted with a quality swivel and a HTO Lure Clip for quick changing of lures. They can be used with hard and soft lures.

NEBULA X8

Woven from eight strands of Japanese UHMWPE fibre our Nebula X8 is an ultra-soft, supple but incredibly strong and durable line. Designed specifically for the needs of the modern angler who demands maximum durability and high performance. Nebula X8 is tightly woven to produce a low diameter, round profile braid that sits well on both spinning and baitcasting reels without digging into itself. Combining this with its slick, soft and smooth nature creates a high-performance casting line that is perfect for fishing with hard lures, soft plastics, jig heads and jigs, giving the angler maximum sensitivity and immediate feedback. A UV protection layer adds resistance to the damaging effects of the sun on braided lines, ensuring that the braid lasts longer, saving the angler money in regular line replacement.

- 100% UHMWPE from Japan.
- Tightly woven for higher breaking strain to diameter, better line profile and casting.
- UV protection for a longer lasting line.
- Designed for modern lure anglers.

NEBULA FC

Specifically designed for the modern lure angler, our Nebula FC line is made from 100% Fluorocarbon line imported from Japan. Fluorocarbon leaders are an essential part of modern lure fishing, adding a short length to a braided mainline can make the difference between catching and blanking. Refracting light similar to water, Fluorocarbon is virtually invisible under water, perfect for when lure fishing in crystal clear waters and when targeting wary fish.

Nebula FC has tightly compacted molecules compared to standard monofilament this makes the line harder, so it is more durable, perfect for fishing near snags and weedy areas. These tight molecules also reduce much of the stretch in the line, making it ultra-sensitive, but also heavier than mono, meaning it will sink three times quicker, taking the slack out of the line between the lure and the mainline. Perfect when fishing lures deep and for positive hook-ups.

Nebula FC is fully waterproof, it cannot absorb water which ensures it stays as strong at the start of the session right through to the end.

- 100% Fluorocarbon from Japan.
- Refracts light like water making it virtually invisible.
- Low stretch, sensitive, hard wearing, fast sinking leader material.

HTO SOFT LURES

OFFSHORE SHAD

A large, heavy offshore shad designed for boat anglers who are fishing in deep water over reefs and wrecks. Made using a softer plastic material to create a supple body that swims in a realistic way. The jig head and hook are separate, this means that the whole of the soft plastic body can move independent of the jig head, creating an enticing and highly effective movement for catching predatory fish. The lure is also weedless, helping to reduce snagging on weed, rocks and structures, the hook point sits in a groove at the top of the plastic body, keeping it away from these hazards.

One of the best ways to fish with this lure is vertical, jiggling the lure up and down close to the sea bed is a tactic that has proved deadly for bass, cod and pollack. Not only are these lures excellent in the UK, but anglers who head to destinations like Norway and Iceland will find them particularly effective.

INSHORE SHAD

A smaller version of the Offshore Shad, which is perfect for shore anglers and shallow water boat anglers alike. This shad comes with the same style of articulated jig head as its larger cousin, this allows the body and the jig head to move independently from one another. The same soft, supple plastic is used to bring the shad to life with realistic movements. This is ideal for casting from the shore from rock marks, in estuaries and open beaches when searching for bass. From a boat, it is ideal for working on shallow reefs and for casting away from the boat, perfect for bass, cod, pollack and even wrasse have been known to take a fancy to this lure.

MICRO SHAD

The smallest version of the shad, although it is constructed from the same soft plastic material as the others in the range, unlike its two bigger versions, it does not come with the articulated jig head, the hook and jig head are one unit. It is still weedless though, which means it is perfect for hunting out perch, trout and even pike in snaggy, weedy areas. Excellent as a casting lure from a boat or from the bank where it can be retrieved or bounced to attract predatory fish. When fishing from a boat, it can also be fished vertical, a deadly method for perch.

LABRAX STIX

This simple, yet highly effective design is one of the most devastating bass lures there is. Made from a supple soft plastic, the material mixture is made up of 40% salt. When salt is added into the soft plastic mixture, it makes the lure less buoyant and heavier. This weight enables the lure to cast to long distances without any additional weight. It also means the lure sinks quickly so it can get into the danger zone where the fish are lurking. When fished weightless, the horizontal fall and side to side tail action can be irresistible to a bass. This is a versatile lure that can be fished several ways from weightless through to Texas and Carolina Rigged.

CODE	DESCRIPTION	COLOUR	QTY
HLST55SP	Labrax Stix - 5.5"- 16g	Solid Pink	6
HLST55SW	Labrax Stix - 5.5"- 16g	Solid White	6

LABRAX SNAX

A long casting, soft needlefish style bait, designed for bass fishing. This soft plastic lure has a round profile and is thick at the head and the mid-section tapering to a thin tail. The weight is forward of the lure to help balance the bait when casting, this design also contributes to the action. A steady retrieve will see this lure dart like a bait fish, slaloming its way through the water, creating a realistic motion that bass find hard to resist.

HTO SOFT LURES

EEL TAILZ

A long, soft plastic imitation sandeel lure body designed for catching bass, cod and pollack. Designed to fit most jig heads, allowing the angler to customise the weight they need depending on their fishing situation. The body shape of the eel is thick at the head end moving down to a thin tail. At the end of the thin tail sits a heavy paddle tail, the combination of the thin tail and large paddle tail adds extra movement and causes a heavy thumbing action when worked. The lure does not need to be worked hard to bring out the best out of it, small jerks of the rod and a simple sink and draw technique with prove irresistible to predatory fish.

SHAD TAILZ

Soft plastic shad bodies that have a deep belly and a thin tail leading to a big paddle tail. These lures have been designed to fit most types of jig head. The thin body end coupled with the large paddle tail makes sure that the lure has maximum movement, the paddle tail thumbing through the water sending out vibrations to attract fish. Shad Tailz are deadly from a boat when fished with simple sink and draw tactics and from the shore when retrieved or sunk and drawn. These lures have taken bass, cod and pollack in testing, with field testers using these bodies with a wide range of jig head types and weights.

SCHLUGG

A multipurpose trick worm designed by renowned light lure angler, Jake Schogler. It is capable of being rigged in a multitude of different ways including drop shot, jig head, Texas, Carolina and can even be fished weightless. Primarily designed to mimic slim bait fish or ragworm in pursuit of sea species such as bass, pollack, wrasse and cod, it works equally as well in freshwater too, especially for perch.

Constructed in an ultra-soft material which gives a great natural movement, the lure is also scented to encourage bites as well as to get the fish to hold on to the lure for longer. The main body is chunky enough to cope with weedless rigging and the soft seductive tail can be made to wriggle with the slightest of twitches. A ribbed body helps to give out fish attracting vibrations whilst also trapping air bubbles which help achieve a semi buoyant presentation. The tail has a ribbed ball tail which gives tight movements on a straight retrieve whilst also keeping the lure stable when casting for greater distances.

Available in a range of colours designed to mimic the most common bait fish species as well as a couple of brighter colours for deep water and in low visibility. Whether worked back in a straight retrieve near the surface or bounced along the sea bed on a jig head or Texas rig, the Schlugg is sure to catch fish wherever it goes.

MINI / MIDI / MEGA STICK

A range of three Stick soft plastic lures in a mini, midi and mega size. Each lure is flavoured with a strong aniseed scent, a known fish attractant that works all over the globe. The shape of each lure is the same as they go up in size, featuring a fat body that tapers into a flat tail. This design provokes realistic movements in the lure which predatory fish switch onto. The mini and midi stick are ideal for dropshot fishing and for mounting on small jig heads, the perfect lure for smaller perch and trout. The mega stick features a slightly larger flat tail that the other lures, punching out more attraction and is ideal for fishing with jig heads, dropshotting and Texas and Carolina rigging. A perfect lure for bigger perch.

HTO SOFT LURES

MINI SHAD

A small, versatile lure designed for the light lure angler which has been flavoured with a strong aniseed scent. The lure features a large paddle tail which creates maximum movement when worked, sending vibrations through the water to alert nearby predatory fish. It can be fished either dropshot style or on a jig head. It is the perfect lure to target smaller sea species such as smaller wrasse, pollack, codling and inquisitive mini species. In freshwater, perch and trout will take these lures with vigour.

KNIGHT WORM

A killer small, light game lure that is ideal for dropshot fishing. Each lure is impregnated with a strong, attractive shrimp scent. The orange colour contains fluorescent properties so it can be charged with a torch or the UV Torch from our sister brand, Tronixpro. This makes the lure glow and adds extra attraction in coloured water and at night. The rest of the colours are ultraviolet light enhanced, these lures have increased visibility in certain conditions, so they can be homed in on by predatory species. The lure is designed with a heavily ribbed body to increase vibrations running through the water and with an attractive twin tail, which adds extra movement to the lure. Fantastic for all smaller species in both freshwater and saltwater.

BUG-GA

A fantastic bug lure that has caught the HTO Prostaff a wide range of species both in the UK and abroad. Each Bug-ga is impregnated with a strong shrimp flavour to increase hook-ups and get fish holding on for longer. The orange lure has fluorescent properties and can be charged with a UV torch when fishing in cloudy water or at night. The other lures (apart from pearl) are ultraviolet light enhanced to increase visibility in the right water conditions. The body is soft and flexible with paddle type legs and a tail to create maximum movement to attract predatory species. This is a fantastic lure for perch and also wrasse in saltwater.

GO! BOX

Five, fully loaded boxes that contain all of the essentials required to get started in ultra-light fishing. A fantastic set for beginners and kids alike that are the ideal accompaniment to our Rockfish 19 rods and reels. Each box contains a set of lures in the most popular colours with the correct jig heads or weights to fish with them. Three of the boxes are dedicated to jig fishing light game lures, with our Knight Worm box containing both jigs and weights for both jig fishing and dropshot fishing. For anglers wanting to try dropshot fishing for the first time, our Dropshot box contains the HTO Tiny Fish lure and column weights. All items come in a durable, four compartment tackle box, ideal for slipping in a pocket or small tackle bag.

HTO JIG HEADS

BORU HEAD

A high quality, general purpose jig head that is fitted with high quality, super strong and sharp hooks from Owner. Designed for rigging a wide variety of soft baits such as shads and eels, the jig head features a kinked wire coming from the bottom of the ball head to ensure the soft plastic is gripped securely, this helps to stop the problem of soft plastics moving up the hook shank. The ball design is great for getting down through the water column quickly when targeting fish deep, perfect when fishing vertical or when casting away and wanting the lure to sink quickly to start to retrieve.

MAIKURO HEAD

Designed to pair up with our HTO light game lures, these bullet/darter style jig heads are designed to be dynamic, enabling them to glide through the water with minimal resistance. Each jig head is fitted with a strong, ultra-sharp hook to ensure takes result in caught fish. The eye has been brought to the back of the jig head, this creates a pivot point to allow the nose to fall through the water first with little resistance when working soft plastics. There are seven different sizes of Maikuro Head designed to cover most light game fishing scenarios from harbours to canals.

TUNGSTEN JIG HEADS

Our eco-friendly, lead free range of jig heads that are made from 97% tungsten. Tungsten is 1.7 times heavier than lead which enables us to produce jig heads with the equivalent gram rating as leaded versions, in a much smaller unit. Tungsten is also harder than lead, so it is more robust and durable, ideal when bouncing lures in and around rocks. This hardness also transmits back to the angler, when using braided lines and low stretch fluorocarbon leaders, the angler will be able to feel the bottom much clearer than when they are using lead. Each jig head is fitted with an ultra-sharp, strong hook.

- Eco-friendly, lead free range of jig heads that are made from 97% tungsten. Tungsten is 1.7 times heavier than lead, making a much heavier weight in a smaller unit.
- Tungsten is hard, transmitting more back to the angler about the ground they are fishing over.
- Each jig head is fitted with an ultra-sharp, strong hook.

TUNGSTEN SWING FOOTBALL

TUNGSTEN BALL JIG HEAD

A jig head to put some serious movement into soft plastic lures. Instead of the hook being firmly placed into the jig head, it attaches to it via a point, which effectively places the hook and soft plastic on a hinge for unrivalled movement.

CODE	DESCRIPTION	QTY
HTSJH7	1/4oz - 7.2g	1
HTSJH14	1/2oz - 14g	1
HTSJH28	1oz - 28g	1

Ideal for when getting soft plastics down deep quickly and for fishing vertically. The jig head features a bent wire build into the head to ensure soft plastics stay in position.

CODE	DESCRIPTION	QTY
HTBJH3	1/8oz - 3.5g - 1/0	3

HTOJH7	1/4oz - 7.2g	2
HTOJH10	3/8oz - 10.6g	2

HTO TUNGSTEN

TUNGSTEN WEIGHTS RANGE

An extensive range of weights designed for lure fishing that are made with 97% tungsten. Tungsten is an ideal material to make fishing weights out of when setups need to be scaled back and refined. Tungsten is 1.7 times heavier than lead, which means each tungsten weight is approximately 50% smaller than its lead equivalent, having smaller leads allows the angler to reduce the scale of their rigs, allowing them to conceal them better and reducing losses in snaggy areas. This harder material also won't damage when bounced against rocks and transmits more feedback to the angler about the type of terrain they are fishing over when combined with braided lines. Tungsten is also eco-friendly; our weights don't contain any lead which is better for the environment and fisheries.

- Eco-friendly, lead free range of jig heads that are made from 97% tungsten. Tungsten is 1.7 times heavier than lead, making a much heavier weight in a smaller unit.
- Tungsten is hard, transmitting more back to the angler about the ground they are fishing over.
- Smaller size of tungsten allows anglers to reduce the scale of their rigs for better concealment and reducing losses in snaggy areas.

TUNGSTEN SKINNY DROPSHOT

A compact, cylindrical shape that is ideal for working through weed and low vegetation.

NON TOXIC WORM WEIGHT

Non-toxic worm weights which are cone shaped and drilled. They are designed for adding incremental weight to soft plastic lures to alter the casting range, lure action and the depth the lure can dive to. They are incredibly versatile and can be placed as close to or as far up the leader as required to get the right presentation for the target species or terrain fished over. Worm Weights are available as single sized packets or in a handy dispenser that includes a wide range of weights and sizes to give the angler greater options. They are lead free so can be used in freshwater as well as saltwater.

HWW2	2g	10
HWWM	Mix	29

HTO METAL LURES

SHORE JIG

A long casting lure that is fitted with an assist hook. Assist hooks are ideal for the conservation minded angler, they're easier to remove and cause less damage compared to treble hooks. Assist hooks also ensure fish don't bump off as easily as with trebles, fish cannot use the weight of the lure to shake the hook out, resulting in more successful hook-ups. Shore Jigs come in a variety of colours to suit different fishing situations, all of which are holographic patterns to increase flash and visual attraction. The lure action is a pronounced wobble when retrieved with a classic jig flutter when dropping through the water column. Ideal as a lure for fishing in mid water for mackerel and pollack and for bouncing on the bottom when targeting gurnards and even wrasse.

CODE	COLOUR	WEIGHT	QTY

HSJ40G1	Shore Jig - 1, 2, 3, 4, 5	40g	1

FUGITIVE

A slim line casting jig designed for light game and rock fishing for predatory species. The lure is centre balanced to ensure the lure falls horizontally with a forwards and backwards sliding motion to entice fish to take when the lure is on the drop. When retrieved the lure will emit a delicate wobbling action to imitate the natural movement of smaller bait fish species. There are five colours available which are embedded, reflective patterns designed to give off maximum visual attraction to induce takes from predatory fish. Each lure is fitting with quality split rings and a treble hook. A cracking lure for predatory species such as pollack, codling, wrasse and perch, as well as mackerel, scad and garfish.

CODE	COLOUR	WEIGHT	QTY
HFUG51	Fugitive 1, 2, 3, 4, 5	5g	1

CODE	COLOUR	WEIGHT	QTY
HFUG71	Fugitive 1, 2, 3, 4, 5	7g	1

FROLIC

Available in a range of weights from a light 8g right up to 75g, this is a versatile range of jigs that can be fished from the shore or boat. Rigged with strong, twin assist hooks, this jig will make sure any attacking species is hooked and won't come off, a better alternative to treble hooks. This deadly pattern of jig can be fished from the shore with a slow or erratic retrieve and is also effective when bounced on the bottom. From a boat, it is ideal for fishing with a sink and draw method in shallow water. A great lure for catching pollack, coalfish, bass and cod.

CODE	COLOUR	WEIGHT	QTY	CODE	COLOUR	WEIGHT	QTY

HMFRO2001	Frolic 1, 2, 3, 4	20g	1				

BOOGIE

The go to jig for summer fishing, this is the perfect jig for fishing from the shore in deeper water, especially from rocky headlands in search of pollack. The Boogie is ideally used with a sink and draw method, allowing the jig to sink with a short retrieve before allowing it to go again. This imparts a fluttering motion before darting off when retrieved, most fish will hit this lure on the drop, when a predatory fish senses the bait fish is at its weakest point. These jigs are also good for fishing in shallow water or in slow tides from a boat, they're wobble and fall motions ideally suited to fishing vertical. Holographic, reflective pattern generate added interest for inquisitive fish. A good lure for catching pollack, bass, mackerel and even wrasse. Rigged with twin assist hooks.

HTO METAL LURES

GRADUAL

A slower falling jig that has been weighted to be the most responsive jig in the range. Small movements of the rod tip will generate an exaggerated motion that predatory fish will find hard to ignore. The weight distribution with concaved tail and thin head creates an erratic, fluttering motion, perfect for fishing with the long fall jiggng technique, with the twin assist hooks ensuring that any fish taking on the drop will be hooked. They can be fished fast or slow depending on the situation and target species. The four colours are produced with a highly reflective, holographic finish for maximum attraction.

GET DOWN

A streamlined, well balanced jig that has been designed to descend rapidly to the kill zone. This is the lure to use when fishing in deeper water and over wrecks, when getting down to the fish requires speed and efficiency to make the most of the drift. The Get Down can be worked by retrieving the jig slowly with small jerks to induce a take. The lure also fishes well with standard jiggng tactics and also when fished on the long fall. The lure will flutter and wobble with an erratic motion to maximise its attraction. It comes in a series of four colours with a striking holographic pattern and a large red eye target. Rigged with twin assist hooks.

OSOI JIG

A large slow jig that has been designed for fishing in deeper water. Ideal when fishing deep channel wrecks, banks and in locations such as Norway. This is the ideal slow jig to fish in strong currents, with the weight allowing the jig to keep its position and be worked effectively. The centre balanced jig will immediately start to dance and flutter when it moves through the water, so some tension should be applied to get the jig to sink to the bottom, vertically in the quickest possible way. When in the danger zone, this profile will create a series of attractive movements that provoke a response from predatory fish. Jigs come with attractive patterns that have been designed to provide the best visual stimulation when worked. Rigged with twin assist hooks.

SLOW JIG

A highly effective vertical jig, its flat, bullet shape ensure that it is fast sinking so it will reach the kill zone quickly, ideal when drifting across a structure and time is of the essence. Unlike some traditional style jigs, slow jigs should be worked slowly, this creates flashes, vibrations and flutters as the jig is moved through the water, irresistible to predatory fish. The jig body is slightly contoured to enhance this action and works well in conjunction with the holographic patterns for maximum attraction. Our Slow Jigs have been responsible for catching over forty species in the UK alone, from bass, cod and pollack to wrasse and gurnards. A fun and exciting method of fishing that yields fantastic rewards.

HTO SQUID JIGS

IKA HUNTER

A jig that has been specifically designed for fishing for squid and cuttlefish. The jig itself is made from a transparent plastic body which is covered in a tight, weave, net light material. This is done to firstly give the effect of light passing through the lure giving it a natural look as light passes through the lure when it is jigged, it will twinkle, sparkle and flash to encourage squid to attack. This material is also hard and rough, giving the squid the sensation of fish skin, encouraging them to grasp the lure with vigour, to ensure positive hook-ups. Brown wings and a deep, red eye provide extra attraction and are a distinct contrast to the colour of the body. The jig features a weight under the chin of the lure which is drilled, this allows the addition of more weight when fishing in deeper water. A luminous band followed by a series of razor sharp, stainless steel points completes the jig at the business end. This is a light jig, that can be used on lighter lure rods and light, specific squid rods.

HOT COAT

A cleverly designed jig for squid fishing that is a highly effective lure that will catch squid when all else fails. The secret to this incredible, consistent catch rate is the use of a hot coat, this outer layer around the jig keeps it up to 1c warmer than the surrounding water. Squid and cuttlefish use heat as one of their main hunting instincts to differentiate prey and home in on them, the hot coat mimics this, leading to increased catches. The jig is well balanced providing just the right amount of action to induce a squid or cuttlefish to attack. It has a fish skin texture and deep red eyes and brown wings. The weight under the chin of the lure is chrome, to further enhance the visual attraction of the lure. A luminous band at the base of the jig adds luminosity just above the two rows of stainless-steel points, acting as a target point for the squid.

HTO

HTO SWIVELS, LINKS & CLIPS

LURE CLIP - BLACK

A small, strong, secure link for attaching lures. Based on the design of the Coastlock Snap Swivel from our sister brand Tronixpro, this is one of the strongest and most secure lure links we do. The secure, wrap around, fit over clip is tight and designed so it is impossible for a lure to work its way through, lures will only come out if the angler wants them to. Although super secure, attaching lures is easy, thanks to the way the clip is designed, allowing the eye of the lure to be placed over the wire and forced round. The internal space in the clip gives plenty of movement for a weedless hook, jig head or hard lure to move, so it does not impact on lure performance. This compact clip is lightweight too, so its weight will not change the balance of the lure.

LURE LINK

A multi-purpose strong link that is ideal for all lure fishing situations. The design of these lure links promotes strength and security, made with a small box section at one end, when a lure or swivel is placed inside this box section, it is difficult for it to come out whilst fishing. The bent in wire makes it easy to clip on any style of lure from weedless hooks when fishing with senkos, jig heads and hard lures. When fishing with soft plastics, the extra room in the box section gives the lure enough room to move freely to increase its action. Although strong, they weight very little so they will not affect the action of the lure.

SOFT LURE RATTLE

A simple but highly effective way to add audible attraction to any soft lure. A clear plastic cylinder has a chamber which houses two ball bearings, as the lure is worked through the water the two bearings move around in the chamber creating a loud rattle or ticking sound. This sound vibrates through the water giving predatory fish an awareness of the lure, even if they can't see it, allowing them to home in on it for the final attack. The cylinder is tapered at one end to allow it to be inserted easier into the body of a soft plastic lure. The sound coming from the rattles can often be the target point fish use to attack, so placing the lure close to the hook can increase hook-ups. There are two sizes available with the small size fitting most narrow-bodied soft plastics and the larger fitting bigger shads and sandeel shaped lures.

LIGHT GAME LINK

A small, lightweight link designed specifically for light lure angling. Sometimes lure fishing can present situations where quickly and easily changing a lure is essential before the opportunity is lost. Our HTO Light Game Links make it quicker and easier to change light lures with little effort. Like all of our terminal tackle, they're very strong so they won't pull out if a bigger fish is caught on ultra-light tackle. They are lightweight so they won't change the subtle, gentle actions of lightweight lures.

JIGGING RING

A super strong, compact solid ring designed to be attached to the end of the leader to connect it to the lure. The special design combats line slip, allowing the knot to sit in the recess of the ring and not travel around the ring when the angler is working a jig. As a solid ring, this design is super strong and impossible to break under standard fishing situations, the line will go before the ring does. The sides of the ring have been rounded slightly and are smoothed off, so there is nothing that can cut the line, this also helps to slip on split rings easier when connecting a jig.

JIGGING SOLID RING

A compact, solid ring made from stainless steel that is designed for attaching assist hooks to jigs. Pressed from a single sheet of solid metal, these rings are impossible to break under normal fishing conditions. Each ring has an outside diameter of 8mm which is a good size for attaching two assist hooks. The side of the ring is smooth and slightly rounded so there is nothing for the braid to snag on or rub against to compromise its strength. Solid rings can also be used to attach to a leader for quick connection of a jigs split ring, the slick rounded sides perfect for slipping split rings on and to not damage line when knotted directly.

FLAT SPLIT RING

An ultra-strong split ring rated up to 90kg that can be used for all manner of lure fishing applications. Made from strong stainless steel and a smoothed exterior, these split rings are ideal for use on lures big and small. The tight-fitting metal will require split ring pliers to ply apart to aid connection. These compact split rings are ideal for use with our range of specialist jigs and slow jigs. Although designed for attaching jigs to our jigging rings they are small enough with an outside diameter of 8mm to be used for attaching hooks to larger hard lures too, especially useful when fishing for bigger fish abroad such as tuna or tarpon.

TWISTLOX**NEW**

Super strong and needle-sharp hooks that have been designed for fishing with soft plastic lures, especially worm/senko bait style lures as well as smaller fish/shad lures. The weedless hook features a thin pin and spiral that is placed in the eye of the hook. Its purpose is to enable the angler to screw in or push in a soft plastic lure for security, with the other end of the lure being pushed around the hook point. With this setup the soft plastic lure sits on the Twistlox and the bend of the hook. This makes soft plastic lures work better, with more movement and for creating weedless rigging.

**INLINE SINGLES****NEW**

With conservation foremost in most lure anglers' minds, and the rapid rise of anglers catching and releasing the majority of their catch, the use single hooks instead of treble hooks on lures is becoming commonplace. Our Inline Single hooks have been designed as a lightweight, strong hook that can replace treble hooks on all hard lures. The hooks feature a larger eye so they can be attached directly to the split rings on most lures, making conversion easy. An extended barb and beak point ensure that hook-ups are still positive, and the amount of lost fish is reduced. The beaked point also reacts better when bouncing off rocks, helping to protect the point to retain its needle-sharp edge. Using our Inline Singles is much kinder to fish, making it easier and safer to unhook a catch for a quick photo and release.

**LURE GAME WEEDLESS WORM**

A super strong hook with a needle-sharp point and a forged bend that is ideally suited to rigging soft stickbait lures. Is ideal for fishing weightless and used for dead sticking. The hook point is slightly interned making it ideal for rigging weedless when fishing in areas of vegetation and snags that hook points can get stuck on. The design of the hook is perfect for fishing with Carolina or Texas rigs. The eye is large enough to accommodate a hitch hiker if required to secure soft plastic baits further.

**LURE GAME WEEDLESS**

An all-round weedless hook that has an offset point and is ideally suited to fishing with worms, shads and other soft plastic baits. The shape of the hook has been designed to keep the soft plastic lure on the hook securely when casting and retrieving, helping to stop any slippage of the lure down the band of the hook. The bend of the hook allows for the point to be kept close to the lure to prevent snagging on weeds or rock, while allowing the lure to push down the shank when a fish takes for a secure hook hold. Built with the same needle point hooks sharpness and forged bend as the rest of the HTO range to produce a super strong, reliable hook.

HTO ACCESSORIES

BREAKWATER BAG

Packed full of features, this lure fishing bag has a copious capacity and is waterproof too. Ideal as a shore and boat lure bag, it is designed rigid and features both carry handles and a shoulder strap for comfort when travelling between marks. The base is made from a durable, hard plastic which copes well with rough terrain such as rocks and boulders.

The lid is made from a rigid plastic and is ideal for use as a base for tackle boxes when tackling up. The lid can be closed with a zip and for quicker access, it can be temporarily secured with a Velcro clasp. To the side the bag features two rod holders for keeping rods secure and upright, great for tackling up without leaning your rods on rocks or walls. A larger pocket on the opposite side is ideal for storing close to hand items like tools or a cloth.

A well thought out bag that is ideal for the lure angler, but also, for the short session beach or boat angler too.

LURE CARRYING CASE

A unique carry case that has been designed for the lure angler who wants to take everything with them for every situation or for storing lures in an organised way at home. This two-tier case features a top and bottom tray with dividers, allowing the angler to organise their lures effectively. The case itself is made from a strong, durable plastic that can take a lot of punishment to keep lures safe and secure. The two clasps keep the lid tight to prevent moisture getting into the case to corrode valuable lures. A carry handle at the top allows the box to be stored vertically to lift boxes out of a tackle box or bag easier. The lids of each box are recessed slightly with a lip, so they can be stored on top of each other without slipping off. The perfect storage solution for the lure angler who wants to get organised.

DOUBLE SIDED LURE BOX

A durable, clear plastic box that has been designed to store lures securely and organised. This well thought out box contains individual compartments that are designed to store individual lures. The idea behind this is to prevent lures snagging together, something that is commonplace when using treble hooks. This separation also helps to reduce the amount of corrosion with wet lures stored separate from each other, this is not a substitute for washing lures thoroughly after use but helps keep that separation during a session. The box is double sided, featuring an equal number of separate compartments on either side. Both sides are secured with two heavy duty clasps on either tier. At one end of the box is a plastic carry handle, allowing ease retrieval from a bag when stored vertical. Available in three different sizes to cover different lure sizes and carrying requirements.

LURE ROD HOLDER

For the rock hopping, mobile lure angler, keeping their hands free when walking long distances or traversing around steep, rocky terrain can often require two hands. This neat little rod holder has been designed to make life easier for the mobile, scrambling lure angler. The rod holder will attach to a belt so the rod can be placed in it when on the move. Not only is it great for walking it is ideal for keeping rods away from sharp rocks when tackling up too, keeping both hands free to tie on lures and rig up leaders. With many rod and reel setups costing hundreds of pounds, a small investment in this useful rod holder will keep rods and reels away from sharp surfaces that could scratch and damage a rod, keeping gear in top condition.

LURE FISHING SCISSORS

Multi-purpose scissors that have been designed for the lure angler that needs a do everything pair when on lightweight missions. The blades are perfect for cutting fine mono and braid with ease, whilst the inbuilt split ring pliers are handy when needing to change hooks on hard lures or to change lures when attached with a split ring. These are great boat fishing scissors too, especially for jig anglers where the split ring pliers will come into their own. The scissors come in a hard-wearing nylon pouch with belt loop for attaching to a belt or strap on a lure vest or waders. The scissors have an elasticated lanyard which is clipped onto the pouch for extra security. The lanyard can be removed from the pouch and can be clipped onto another secure point such as a D ring on a wading jacket.

LURE FISHING VEST

Designed as a utility vest for the roaming angler, this lure fishing vest has plenty of pockets to store a mass of gear. This includes two large pockets on the front for storing tackle and lure boxes and two smaller pockets at the top for line spools and accessories. A small pocket on the right-hand tackle box pocket is ideal for storing a small accessory box with jig heads, swivels, spare hooks etc. in. There are also numerous D rings which tools such as clippers and scissors can be attached to. It has been designed to carry all your gear on your person without the need for carrying a bag. It is a one size fit, with adjustable shoulder and waist straps to provide a comfortable, secure fit. Ideal for anglers who fish all year round who need to adjust the vest size to cope with extra clothing in winter. The vest is secured with two buckles.

LRF MEASURE

A compact measuring device ideally suited to measuring small species. It is retractable, coming in four sections that slide into a small, compact unit. It is half circular in shape so that it holds smaller species securely when measuring, protecting the fish and also providing a more accurate length reading. There is a loop at the top of the measure that allows it to be connected to a lanyard for safe storage. It is perfect for keeping in a small waist bag or in a pocket when on a session. It is made from durable plastic and is easy to clean. A useful, compact measure for the species hunting angler who likes to accurately record their catch.
