

IRONIXPRO **2019**

COBRA TT V.2

COBRA TT V.2

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPCBT4	4.2m - 13'9"	100-225g/3.5oz-8oz	3	22mm	582g

The redesigned heavyweight rod of the Cobra series. Designed for the angler who wants to target bigger fish, the TT is ideal for ray fishing, targeting smoothhounds and for cod fishing in big winter seas. The TT features a powerful mid and butt section that flows neatly into the hollow power tip that makes the rod perfect for casting larger weights and baits. The hollow power tip gives plenty of power for exceptional casting performance, yet still provides good bite detection for spotting faint bites from smaller fish at range. This rod is ideally suited to the unique nature of fishing venues that feature fast running tides, big seas and mixed rough ground. The Cobra TT is a light blank, built using 46 Ton carbon it is incredibly strong. The rod is fitted with high-quality fittings from Fuji including black Alconite KWAG guides and a quality DPS reel seat. Ideal for use with Tronixpro Virtuoso Reels loaded with Tronixpro Xenon Fixed Spool Monofilament.

- Fuji Alconite KWAG Guides and DPS Reel Seat
- Three-piece rod. Built using lightweight 46T Carbon
- Power hollow tip with powerful mid and butt section for casting distance
- Comes with hard protective case and padded bag

COBRA GT - 2

COBRA GT-2

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPCGT2	4.2m - 13'9"	100-200g/3.5oz-7oz	2	20mm	703g

The brand-new GT-2 is a unique, and possibly slightly controversial style rod. It's a continental style rod, but a two piece! The GT-2 has the same spliced in solid tip that the GT three-piece features, designed for good bite indication but rigid enough to cope with the rigours of fishing in fast tides and strong surf conditions. The progressively powerful mid tip and butt section gives excellent casting performance and backbone for landing big fish from the shore. This two-piece version was added to cater for the growing number of anglers who have been looking at the continental style rods but are wary of fishing with three-piece rods. This two-piece version was added to cater for the growing number of anglers who have been looking at three-piece, continental style rods but have been wary fishing with them. It is hybrid rung with Fuji CC framed KWAG Alconite rings and a quality Fuji Sliding DPS Reel Seat for use with both multiplier and fixed spool reels. Constructed from lightweight 40T carbon from Japan.

- Fuji Alconite Guides and DPS Reel Seat
- Built using lightweight 40T Carbon
- Sliding reel seat, ideal for multiplier and fixed spool use
- Comes in a hard-wearing padded bag

COBRA GT

COBRA GT

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPCBGT4	4.2m - 13'9"	100-200g/3.5oz-7oz	3	20mm	703g
TPCBGT5	4.5m - 14'9"	100-200g/3.5oz-7oz	3	20mm	718g

Designed by England International, Callum Graham as a British style three-piece continental surfcasting rod. Other continental rods can struggle with the rigours of British sea fishing, the Cobra GT, being designed from the ground up for that purpose, does not. A spliced in tip gives good bite indication that blends into a progressively powerful mid and butt section. It provides excellent casting performance and also has the backbone to land big fish in heavy seas and running tides. It has a proven pedigree, a long list of impressive captures from across the world including large 60lbs+ stingray in Europe and big guitarfish in South Africa. The handy three-piece construction makes it the perfect travel companion. Super volume fibre density 40T carbon from Japan creates a lightweight but ultra-strong blank, fitted with Fuji Stainless Alconite KWAG guides and a DPS Reel seat, this is a sturdy rod. A screw weight system in the butt allows you to balance the rod with your reel.

- Three-piece, 40T Japanese carbon blank
- Rung with Fuji Alconite rigs and a DPS reel seat
- Designed for British shore fishing
- Impressive list of captures from around the world
- Comes with hard protective case and padded bag

COBRA LIGHT

COBRA LIGHT

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPCBL4	4.2m - 13'9"	50-150g/2oz-5oz	3	20mm	444g

Designed to cast fragile baits to distance without breaking them up. It is the perfect rod to fish with when looking for delicate bites and for fishing close in when a heavier three-piece or traditional beachcaster is too much. It's the ideal light beach fishing tool. The Cobra Light features a perfectly balanced tip, not too soft that it flops around in the wind and not too stiff that it could bump off shy fish or not show delicate bites. It has a progressive action and taper that allows you to get the best out of the rod throughout its "casting range. The recovery rate is excellent and is smooth and fast without being too aggressive. The blank is constructed from 40T carbon with a carbon scrim developed by Mitsubishi, Japan. This super volume, lightweight, high-density carbon produces a light but strong blank. The rod is fitted with Fuji Stainless Alconite KWAG guides and has a Fuji DPS reel seat.

- Three-piece, 40T Japanese carbon blank
- Rung with Fuji Alconite rigs and a DPS reel seat
- Designed for light tackle British shore fishing
- Comes with hard protective case and padded bag

NAGA^{MX}

NAGA MX

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPNMX	4.0m - 13'1"	100-225g/3.5oz-8oz	2 + red.	24.6mm	822g

Designed by Welsh International and former World Champion, Joe Arch. The Naga MX is a brute of a rod, designed as a traditional two-piece beachcaster that can cast 5 to 8oz plus bait. The powerful blank is made from 30-Ton, super volume Japanese Carbon that produces a light, slim blank that is incredibly strong. Although this is a fishing rod first and foremost, it is an out and out casting machine too, the powerful mid and butt sections giving ultimate compression for punching leads to distance. It has been designed as an all-purpose, go to fishing rod that can do everything. If an angler could only own one rod, this would be on the list. It is perfectly capable of registering bites from the smallest whiting in the depths of winter to controlling a fast and furious run from a tope in summer, it's the rod that has it all. The rod is rung with Fuji Stainless Alconite KWAG guides and comes with Tronixpro Coasters.

- Two-piece, equal length blank with reducer
- Designed for long distance casting with multiplier reels
- Ideal for rough ground, rock fishing and for bigger fish species
- Comes in a hardwearing, cloth bag

BLAZE CX I

BLAZE CX I

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBCX14	4.2m - 13'9"	100-225g/3.5oz-8oz	3	23.8mm	611g
TPBCX15	4.5m - 14'9"	100-225g/3.5oz-8oz	3	23.8mm	672g

A unique blank that brings a new dimension to three-piece rods by featuring three, unequal sections. The butt is the shortest, the middle the longest and the tip the middle-sized section. Spigot joints disrupt the smooth transfer of power through the blank. By making the butt shorter we bring the first spigot lower down the rod enabling the use of a longer mid-section. This mid-section is allowed to flex smoothly and evenly during the cast to produce a slightly slower, but more efficient blank that is ultra-easy to cast. It is a fantastic clean beach rod in calm and moderate seas, ideally suited to casting weights in the range of 5 to 6oz. It's perfect for species fishing including plaice, bream, dogfish, flounder, bass, mullet, rays and hounds. It is constructed from 30-ton Japanese carbon which is lightweight but very strong, rung with Fuji guides and a DPS reel seat.

- Unequal sections for more efficient power transfer and easier casting
- Designed for fixed spool reels
- Comes fitted with Fuji Alconite KWAG Guides with CC frames and a Fuji DPS reel seat with cushioned hood
- Built using 30T Japanese Carbon from Mitsubishi
- Comes with rod bag

BLAZE CX II

BLAZE CXII

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBCX24	4.2m - 13'9"	100-200g/3.5oz-7oz	3	23.8mm	646g
TPBCX25	4.5m - 14'9"	100-200g/3.5oz-7oz	3	23.8mm	694g

Designed as a long-range casting rod, this powerful blank is excellent for fishing at distance, yet retains a super sensitive hybrid tip. This super sensitive hybrid tip is excellent for registering the faintest of bites at long distance. The blank has been constructed from high quality, super light 30T carbon from Japan, this produces a stiff blank with extreme power that flows effortlessly into the tip section and super sensitive hybrid tip. This efficiency of power allows the rod to propel baits to extreme distance with ease. Using a weight in the region of 150g will get the best from this rod. It is the perfect rod for fishing over clean beaches, at distance for small fish such as flatfish and whiting in calm and moderate conditions. An ideal tool for the serious match angler looking for that edge to bring more fish to shore. The rod is fitted with quality Fuji fittings throughout including CC framed KWAG guides and a Fuji DPS reel seat.

- Powerful blank with super sensitive hybrid tip, perfect for registering bites at distance when fishing on clean beaches.
- Designed for fixed spool reels.
- Comes fitted with Fuji Alconite KWAG Guides with CC frames and a Fuji DPS reel seat. Built using 30T Japanese Carbon from Mitsubishi.
- Comes with rod bag.

BLAZE CX III

BLAZE CXIII

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBCX34	4.2m - 13'9"	100-250g/3.5oz-8.8oz	3	23.8mm	642g
TPBCX35	4.5m - 14'9"	100-250g/3.5oz-8.8oz	3	23.8mm	694g

Based on the Blaze CXII, this rod features the same powerful distance casting blank but utilises a tubular tip for even more power. Although not as sensitive as the hybrid tip model, the Blaze CXIII has been designed for casting heavier weights and bigger baits to ultra-distance. It is also the right tool for the job when fishing in big seas, fast running tides and amongst rough ground. An excellent rod when targeting bigger species such as huss, rays and smoothhound. Although this rod features a stiffer tubular tip, it still retains the sensitivity to register bites at distance and maintains its rigidity when faced with high winds and a pounding surf. When there is a need to punch that big crab or squid bait out to distance, this is the rod to use. The blank is made from the same 30T Japanese Carbon as the CXII, making it a strong but lightweight rod to handle. It is rung throughout with Fuji KWAG guides and comes fitted with a Fuji DPS reel seat.

- Powerful blank with tubular tip for casting bigger weights and baits, perfect when fishing in big seas, fast running tides and in rough ground.
- Designed for fixed spool reels.
- Comes fitted with Fuji Alconite KWAG Guides with CC frames and a Fuji DPS reel seat. Built using 30T Japanese Carbon from Mitsubishi.
- Comes with rod bag.

BLAZE MX I

BLAZE MX I

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBMX1	3.96m - 13'0"	75-125g/2.5oz-4.5oz	2	21.5mm	659g

When using standard beachcasters is overkill for the situation, this rod will step into the void. Designed as a light beachcaster, the MXI adds finesse to light tackle fishing. Ideal for fishing in estuaries, harbours and calm, surf beaches, this is a superb rod for targeting bass, flatfish, whiting and other, prolific small species. The action of the rod has been designed to make fishing with lighter lines and smaller, delicate baits easy, eliminating any problems with snap offs or blown baits that stiffer rods can cause. The tip is sensitive with an action that promotes fighting smaller fish on small hooks and lighter hooklengths, yet retains enough power to cast 4oz without any problems. Despite its "light" pedigree, it is more than capable of landing a bigger, unexpected fish as well, when required. A crisp, responsive, lightweight blank that ticks all the boxes for the light tackle angler. The blank is 13ft in length and comes as a two equal sectioned rod, which makes it easier to carry in a rod bag and transport in the car.

- Designed for multiplier use
- Shrink wrapped butt with sliding Fuji DPS reel seat.
- Constructed of xT carbon
- Fuji K Guides
- Comes with rod bag

BLAZE MX II

BLAZE MXII

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBMX2	4.01m - 13'2"	85-155g/3oz-5.5oz	2	23.4mm	711g

The MXII is the rod of choice for the angler who will be fishing open, clean beaches or in estuaries. This is a versatile rod that can be employed for many different tasks from light line fishing through to heavier beach fishing situations. A fantastic rod for bass fishing, flounder fishing in estuaries and even ray and cod fishing on clean to light mixed ground. The rod is designed to cast a 5oz lead with a standard overhead cast. When wanting to reach further, it performs best with a 4oz lead and a pendulum cast. The MXII is a great rod for the match or freelance angler looking for a scratching rod, especially in winter when windy conditions may make lighter rods unusable. In the summer, the blank lends itself well to float fishing for species such as garfish and for close quarters wrasse fishing on the rocks. A lightweight, responsive blank that can be deployed for all manner of beach and estuary fishing situations.

- Designed for multiplier use
- Shrink wrapped butt with sliding Fuji DPS reel seat
- Constructed of xT carbon
- Fuji K Guides
- Comes with rod bag

BLAZE MX III

BLAZE MXIII

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBMX3	4.12m - 13'6"	100-180g/3.5oz-6.5oz	2	23.8mm	807

The most versatile rod in the Blaze MX range, designed as a match rod but equally at home in the hands of the freelance angler that needs a do it all style rod. The rod features an easy to load action that makes casting effortless for anglers of all casting abilities and when casting to distance without destroying baits. The tip is sensitive but rigid enough that it won't flop around in a good surf, this promotes excellent bite detection allowing you to keep in touch with everything that is going on at the business end. Perfect for off the ground and overhead styles of casting, this is a fantastic all-round rod that covers a wide variety of conditions and situations that an angler may face. It's a great rod for whiting and flattie fishing off the beach, bass and cod in mixed rough ground and for bigger species such as ray and smoothhound. A real, multi-purpose fishing rod.

- Designed for multiplier use
- Shrink wrapped butt with sliding Fuji DPS reel seat
- Constructed of xT carbon
- Fuji K Guides
- Comes with rod bag

BLAZE MX IV

BLAZE MXIV

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBMX4	4.12m - 13'6"	110-220g/4oz-8oz	2	24.6mm	795g

A heavier, match style rod that is capable of casting leads to 7oz plus bait. This is the rod of choice for the angler who is likely to be fishing in mixed to rough ground but requires a sensitive tip and good bite detection at range. The rod features a powerful butt and mid-section to ensure it can cast weights to range and cope with fast running tides and to pull out of snags when needed. This extra power is also useful when fighting bigger fish amongst the rough stuff or when fishing in heavy seas off a beach in search of winter cod. The action has been designed to be useful across the whole casting range, making it easy to use at short and long distances, whether that's hitting the third breaker or a spot 200 yards off, it will deliver accurate casting with ease.

- Designed for multiplier use
- Shrink wrapped butt with sliding Fuji DPS reel seat
- Constructed of xT carbon
- Fuji K Guides
- Comes with rod bag

BLAZE MX V

BLAZE MXV

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBMX5	4.32m - 14'2"	110-250g/4oz-8.8oz	2	25mm	920g

The heavyweight of the MX range, the MXV has been designed as the rod for the angler who fishes in deep water, heavy rough ground and in fast running tides such as in the Bristol Channel. The rod of choice for the angler who is fishing for big conger and tope off the shore and big rays and cod in rough ground and deep water. The blank is powerful, especially in the butt and mid-section. Whilst the tip also retains reserves of strength, the tip isn't so brutal that it cannot detect bites, it still retains excellent bite sensitivity in all conditions. It is designed to cast with weights up to 8 ½ oz. Although this rod can be cast conventionally using an overhead thump, to get the best from it, a pendulum style cast is required. Having a good casting technique will get the most performance from this rod, it's a fishing rod first and foremost but also a rod that can be taken to the court for measured, long distance casting.

- Designed for multiplier use
- Shrink wrapped butt with sliding Fuji DPS reel seat
- Constructed of xT carbon
- Fuji K Guides
- Comes with rod bag

XENON TT POWER

XENON TT POWER

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPXETT4	4.2m - 13'9"	100-300g/3.5oz-10.5oz	3	24mm	652g
TPXETT5	4.5m - 14'9"	100-300g/3.5oz-10.5oz	3	26mm	737g

A continental style rod that has some serious grunt, designed to cast weights of up to 300g, large bait delivery is a thing this rod does very well. Ideally suited to fishing in big seas and fast running tides for larger species such as cod, rays, smoothhound and even tope. Although the blank action has been designed for heavy fishing, it is easy to cast while retaining a sensitive tip to spot bites. It is a three-piece hi-modulus carbon blank that features a tubular power tip with a strong, semi-parabolic, progressive action throughout. Reinforced ferrules give confidence when distance casting. The action is ideally suited to an overhead thump, which will get the best out of the rod as opposed to other actions. The rod will work at its optimum when casting weights between 170 and 210g with bait.

- Designed for fixed spools
- Three-piece blank made from xT carbon
- Fuji DPS reel seat and Fuji Alconite K Guides
- Comes with rod bag

XENON MATCH

XENON MATCH

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPXEM	4.17m - 13'8"	100-180g/3oz-6oz	2	26mm	772g

A light beachcaster designed to cast 3 to 6oz for the match and freelance angler who is targeting estuaries, harbours and clean, sandy surf beaches. Being so light, it's a fantastic rod for targeting bass, whiting, flatfish, bream and garfish, it would be the go-to rod for fishing in the summer, when calmer waters require lighter lines and techniques. The tip is sensitive to aid bite detection, perfect for when scratch fishing or targeting smaller species. The blank action itself was designed to allow easy loading so it can be fished effectively by anglers of all abilities. A fast, progressive 24-Ton blank which has a powerful mid and butt section giving the rod plenty of reserve when fighting bigger species or punching leads into a head wind. Featuring Fuji K Guides and a comfortable Tronixpro Coaster Reel Seat, this is a sweet and crisp all round light beach fishing rod.

- Designed for multiplier and fixed spool reels
- Fuji K Guides and a Tronixpro Coaster Reel Seat
- Two-piece equal section rod
- Comes with rod bag

XENON POWER

XENON POWER

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPXEP	4.17m - 13'8"	150-225g/5oz-8oz	2	26.7mm	854g

A powerful two-piece traditional beachcaster with a fast taper blank that is capable of fishing big baits at long range. Ideal for fishing general surf beaches, clean and mixed ground, rock fishing and when fishing structures such as piers for bigger conger. The perfect rod for fishing in a big sea, a fast running tide or when faced with deep water. A fantastic rod for fishing for all manner of species including bass, cod, ray, huss, conger, tope, smoothhound and other larger species. We believe in designing rods that are for fishing, although this rod can cast weights up to 8oz, we've still managed to incorporate a powerful but sensitive tip to register delicate bites. In testing, we've found this particularly useful when conger fishing, the tip giving us good indication of delicate bites from shy conger mouthing baits. The blank is constructed from 24T carbon which produces a light but very strong blank with thicker walls for durability. Featuring Fuji K Guides throughout and a Tronixpro Coaster reel seat.

- Designed for multiplier and fixed spool reels
- Fuji K Guides and Tronixpro Coaster reel seat
- Built using 24T carbon
- Comes with rod bag

XENON TRAVEL

XENON TRAVEL

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPEXT	3.81m - 12'6"	100-180g/3oz-6oz	6	25.7mm	875g

With airlines charging more for taking excess luggage, including large rod tubes, the Xenon Travel is the perfect travelling companion for the worldwide angler. It breaks down into six sections, meaning it will fit easily into most hold luggage cases. This small package makes it convenient for taking on family holidays where room for fishing tackle is limited. It's also a fantastic rod to leave in the boot of the car for those impromptu sessions. Despite the multiple sections, we have worked hard to produce a fluid, fast and powerful blank that has the same powerflow as a traditional two or three-piece rod. At home it is the ideal rod for catching bass, bream, whiting, flatfish and garfish. Whilst abroad, it would have no problem catching small and medium sized species but with the added reserves of power in the butt, would be able to tackle larger species such as rays and fast running fish.

- Six-piece rod, ideal for fitting in a suitcase
- 24 Ton Carbon, strong and lightweight
- Fuji K guides and a Tronixpro sliding coaster seat
- Comes with protective cloth bag

APHEX GT

APHEX GT

TPAXGT5	4.5m - 14'9"	100-200g/3.5oz-7oz	3	22mm	592g

An ideal all-round beach fishing rod that is perfect for fishing on clean beaches. The spliced in solid glass tip provides excellent bite detection, making this a great rod for flatfish fishing and perfect for bass in calmer seas or in a churning surf. Although the tip is designed for bite detection, it stays rigid when fished in heavier seas and powerful tides. The tip blends in progressively with the mid and butt section which gives you greater control when you need to bring in those bigger fish. The power has been harnessed to give you the right balance across the casting ranges, long or short. As well as a 4.2m and 4.5m, we have introduced a 3.9m version, ideal for anglers who find fishing with shorter rods suits their casting style and also for youngsters, who are fishing with continental style rods for the first time. Built from lightweight 24T carbon and featuring Seaguide K guides and a Tronixpro DPS reel seat, the Apex Continental GT offers the best compromise between performance and price point.

- Available in 3.9m, 4.2m and 4.5m, casting 100-200g
- Designed for fixed spool reels
- Three-piece blank built from lightweight, 24T carbon
- Rung with Seaguide K guides and comes with a DPS reel seat
- Comes with rod bag

TPAXTT5	4.5m - 14'9"	100-250g/3.5oz-8.8oz	3	22mm	672g

Ideal for the angler who is pursuing bigger fish or fishing in big seas and in adverse weather conditions, but wants to stay with a continental style, three-piece configuration rod. The impressive blank has enough backbone to cast bigger weights up to 5/6oz plus a good sized bait. Its instant recovery and solid tip give the angler confidence to lean into an overhead thump to put baits out to long range. A fantastic choice for smoothhound, rays, tope, conger and other large resident fish. It comes in three versions with a 3.9m version a good choice for the angler who likes a short rod and for youngsters finding their feet with continental style rods.

- Ideal for the angler who is pursuing bigger fish but wants to stay with a continental style, three-piece configuration rod.
- Designed for fixed spool reels.
- Three-piece blank constructed from high grade 30T carbon.
- Rung with Seaguide K guides and a Tronixpro DPS reel seat. Comes with rod bag.

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPAXPL	12'6" - 3.8m	100-250g/2oz-6oz	2	22mm	672g

This 12ft 6in two-piece light beachcasting rod is ideal for fishing for flatfish in estuaries, light surf beach work and as a bass rod. Constructed from 24T carbon, it's light in weight, ideal for holding for long periods of time, especially when bass fishing in the surf. It is rated to cast weights of between 2 and 6oz, coming into its own when fishing with a 3 or 4oz weight plus bait. The blank design has plenty of power in the mid and butt section to cast baits to distance. This power also comes in handy when playing bass amongst mixed rough ground and boulders, the extra power helping to steer fish through any snags. It comes with Tronixpro Coaster Reel Seat and is rung throughout with Seaguide guides.

- Designed for multiplier and fixed spool reels
- Two-piece, slim, lightweight 24T carbon blank
- Tough and durable Seaguide K guides
- Comes with Tronixpro Coaster reel seat and rod bag

TPAXPM	3.96m - 13'0"	85-180g/3oz-6.5oz	2	24.5mm	572g

Despite their name, Match rods are not only popular with match anglers but also the wider angling community as well. These light beachcasters are ideal when targeting species such as bass, flatfish and whiting from clean beaches. The Apex Match is a 13ft, two-piece rod constructed of lightweight but strong 24T carbon. Designed to cast 3 to 6oz plus bait giving the angler plenty of scope depending on the situation they find themselves in, allowing them to fish short and long. The Apex Match has a supple tip, designed to register faint bites, yet, retains the strength for casting distance and rigidity so it doesn't wave around in adverse weather or by the motion of the surf. The rod comes with a Tronixpro Coaster reel seat and is rung with Seaguide K guides.

- 13' in length, casting 3-6oz
- Designed for multiplier and fixed spool reels
- Two-piece, slim, lightweight 24T carbon blank
- Tough and durable Seaguide K guides
- Comes with Tronixpro Coaster reel seat and rod bag

TPAXPB	4.22m - 13'10"	110-200g/4oz-7oz	2	27mm	663g

The out and out beach fishing rod of the Apex range. Slightly longer than traditional 13ft 6in beachcasters at 13ft 10in, this extra length helps when casting and also for manoeuvring fish around snags when landing. Designed for fishing on both clean sandy beaches and light rough ground, this is the ideal rod for catching all manner of species off the shore, especially larger species such as rays, smoothhound, bigger cod and bass. Like the rest of the range it is constructed from lightweight 24T carbon. The rod has a powerful mid and butt section, giving it the power to cast leads in the range of 4 to 7oz plus bait to the distance you require. It features a reflective tip section so you can identify bites easier at night. The rod comes with a Tronixpro Coaster reel seat and is fitted with Seaguide K guides.

- Designed for multiplier and fixed spool reels
- Two-piece, slim, lightweight 24T carbon blank
- Tough and durable Seaguide K guides
- Comes with Tronixpro Coaster reel seat and rod bag

APHEX UPTIDE

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPAXPUP	2.9m - 9'6"	4-10oz	1+1	25.5mm	329g

At 9ft 6in and rated to cast 4 to 10oz this rod is designed to cast heavy weights and bigger baits away from an anchored boat. It makes the ideal rod for big winter cod fishing and also for targeting tope, bass and rays in the warmer months. The supple tip has been designed to give plenty of bite indication and the powerful butt and mid sections provide lift when fighting big fish in powerful tides.

The supple tip makes this an excellent all-round boat rod too, ideal for drift fishing. But also as a rod that can cast away from the boat to search different pockets of ground, something standard boat rods are not designed to do.

The blank is constructed from 24T Carbon making it lightweight, ideal for casting and holding for long periods of time. It comes fitted with Fuji components throughout including a Fuji DPS reel seat and Fuji O rings.

- Two-piece, long tip, short butt 24T Carbon Blank
- Fuji DPS Reel Seat and Fuji O Guides
- Comes with rod bag

APHEX BOAT

APHEX BOAT

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPAXB8	2.44m - 8'	8/15lb	1+1	25.3mm	249g
TPAXB12	2.44m - 8'	12/20lb	1+1	25.4mm	267g
TPAXB20	2.44m - 8'	20/30lb	1+1	25.5mm	276g

A tight range of three boat rods that will cover most boat fishing situations. All rods are built to a long tip, short butt configuration, this helps the rod to maintain a consistent and smooth power curve throughout the blank. All rods are 8ft in length, constructed from lightweight 24T carbon, making them effortless to hold throughout a whole days fishing. Each rod is fitted with top quality Fuji components including a Fuji DPS reel seat and Fuji O guides.

The 8/15lb class offers excellent bite detection and is ideal for light drift fishing, especially over sandbanks for flatfish, rays and whiting. It is also a good, light tackle general ground fishing rod and is a good choice when working lures across reefs and wrecks.

The 12/20lb class beach is suited to general drift fishing, especially when fishing in deeper water after larger species such as rays, brill and turbot. The extra power is ideal for fishing for tope, spurdog and smoothhound whilst at anchor, as well as reef and wreck fishing for bigger cod, ling and pollack.

The 20/30lb class is designed for deep water fishing and when fishing in fast tides. The rod features reserves of power in the butt and mid-section which make it ideal for fishing deep water wrecks for conger, cod and ling.

- Two-piece, long tip, short butt 24T Carbon Blank
- Fuji DPS Reel Seat and Fuji O Guides
- Comes with rod bag

BANZAI GT

BANZAI GT

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPBGT4	4.2m - 13'9"	100-200g/3.5oz-7oz	3	23.6mm	534g

Ideally suited to fishing clean beaches and for match angling, this high performance, high value surfcasting rod punches well above its weight for its price band. An ideal summer rod that won't break the bank. With its spliced in glass tip, the Banzai GT offers fantastic bite detection at any range. The finesse nature of this rod means it is ideally suited to casting delicate baits without blowing them up in the process. Baits such as worm, crab and other soft baits can be used without fear of a ruined bait presentation. The delicate nature of this rod makes it an ideal match angling rod or for the angler who likes to target smaller species over clean ground. A fantastic rod for light tackle fishing in the summer for species such as bream and garfish.

Built with lightweight 24T carbon which makes for a light blank that is crisp and easy to cast, it features SIC guides and a DPS reel seat and comes in three equal sections for easy transportation and a soft cushioned bag.

- Ideal for clean beach fishing and finesse fishing, ideal summer rod.
- Built with lightweight, 24T carbon for a crisp, light blank.
- Three equal sectioned blank for easy transportation.
- Rung with quality SIC guides and a DPS reel seat.

GUERRILLA

GUERRILLA SURF

CODE	LENGTH	CASTING	SECTIONS
TPGS12	3.6m	4oz-7oz	2
TPGS13	3.9m	4oz-7oz	2

A two-piece, fast tapered blank that is the perfect rod for beginners and occasional anglers. The rod is fitted with Seaguide K style anti-tangle guides, which allows it to be used with either a multiplier or a fixed spool reel. The butt section is finished with diamond shrink wrap which is ideal for gripping the included Tronixpro Coasters or for fitting a Tronixpro removable reel seat. The blank has a semi-soft butt section which progresses into a tip with a quick recovery, this has been designed to be a smooth, easy casting rod, irrespective of casting experience. The action is ideal for beginners, giving them a blank that gives them the feeling to recognise when a rod loads, aiding their casting progression. A fine rod for fishing surf beaches and estuaries, it is light enough to hold when fishing for quick biting, fast running fish such as bass and perfect for winking out estuary flatties.

- Two-piece, fast tapered, easy casting blank.
- Equipped with diamond shrink wrap and Tronixpro Coasters.
- K Style, Anti-Tangle Seaguide K guides for multiplier and fixed spool use.
- Idea for fishing estuaries and surf beaches, the ideal beginners rod.

OCEANIK

OCEANIK GT / TT

CODE	LENGTH	CASTING	SECTIONS	BUTT DIAMETER	WEIGHT
TPOGT4	100-200g	3.5oz-7oz	26mm	630g	534g
TPOTT4	100-200g	3.5oz-7oz	24.5mm	692g	534g

Designed to offer great performance at a rock bottom price, these entry level rods are ideal for anglers who are new to the three-piece continental rod scene or are newcomers to the sport as a whole. The low price makes this an ideal rod to start with, especially when combined with our low cost Oceanik Fixed Spool Reel. Such is the quality of the action, many experienced hands have picked up an Oceanik and added it to their armoury. There are two versions of the rod available, a TT, tubular tipped version and the GT, hybrid tip version.

The Tubular Tip (TT) offers better casting for bigger baits and weights. Useful when fishing in rough weather, slightly snaggy ground and when targeting bigger fish.

The Hybrid Tip (GT) is a glass tip that has been designed for increased bite indication. The ideal rod to use when fishing at close range for smaller species where bite indication is a massive edge. Superb as a summer rod for targeting garfish and bream.

- Designed for fixed spool reels
- Fantastic rod for beginners and newcomers to three-piece rods
- SIC anti-tangle K guides and a DPS reel seat
- Cloth bag for protection

VIRTUOSO

A fixed spool range aimed at the match or dedicated angler who fishes with long range, fixed spool surf casting rods and needs the flexibility of using different diameter lines. This is our most versatile fixed spool reel range, giving the angler endless options to suit each fishing situation.

Virtuoso eliminates the problem of having to source expensive aftermarket spools for fixed spool reels. Virtuoso has an interchangeable spools that fit all of our Virtuoso range of reels, all of which can be purchased separately. This allows the angler to easily buy, load and carry as many spools as they wish with all the line diameters they could ever want. Spools are colour coded, allowing them to be easily identified from the top down when in a spool case or box. There are five spools to choose from, from a deep spool through to a UL shallow spool.

Virtuoso reels have been designed for saltwater use. They feature graphite bodies and stainless steel bearings which are corrosion resistant and saltwater proof. Each reel features a precise, micro adjustable drag so you can set it exactly to where it needs to be for the conditions and intended catch. Each reel also features a slow oscillation system that improves line lay and promotes line efficiency during the cast for longer distances.

- Interchangeable, independently available spools
- Stainless steel bearings and graphite body
- Slow oscillation system for improved line lay
- Spools come with Tronixpro Spool Bands and reels come with a Tronixpro cloth bag.
- Reels and spools are 8000 size.

VIRTUOSO ST

Includes 9+1 Stainless Steel Bearings and comes supplied with one medium spool.

CODE	SIZE	BEARINGS	RATIO	WEIGHT
TPVST8	8000	9+1	4.6:1	603g

VIRTUOSO XT

Includes 11+1 Stainless Steel Bearings and a comfortable EVA grip handle. Comes supplied with one medium and one deep spool.

CODE	SIZE	BEARINGS	RATIO	WEIGHT
TPVXT8	8000	11+1	4.6:1	579g

VIRTUOSO XT EXPORT EDITION

The same as the Virtuoso XT but comes with two shallow spools, aimed at markets where lower diameter lines are used.

VIRTUOSO LIVE RUNNER

Offers the same quality and spool intercompatibility as the other Virtuoso reels but features a live runner system. The live runner system allows fish to run with the bait and alert you to the strike without you having to adjust the main drag.

CODE	SIZE	BEARINGS	RATIO	WEIGHT
TPVXT8EA	8000	11+1	4.6:1	579g

CODE	SIZE	BEARINGS	RATIO	WEIGHT
TPVBR8	8000	9+1	4.6:1	662g

VIRTUOSO SPOOLS

The range of Virtuoso spools is extensive. Each available separately allowing the angler to carry as many line configurations as they need for a session. The range features a high capacity deep spool for storing large quantities of thicker line. The medium spool will carry more line than most anglers will ever need in medium breaking strains. For the angler who fishes with lower diameter lines and braid, the shallow and UL shallow spools are ideal. For anglers who require a large amount of low diameter spools, with the minimum investment, there are also hard shallow plastic spools.

CODE	DESCRIPTION	WEIGHT
TPVDS	Deep	138g
TPVMS	Medium	136g
TPVSS	Shallow	129g
TPVSP	Plastic Shallow	88g
TPVULS	UL Shallow	79g

OCEANIK

OCEANIK FIXED SPOOL

A performance beach fishing fixed spool at a value price. It features a slow oscillation system that promotes better line lay for more efficient casting. The 5+1 stainless steel bearings offer a smooth retrieve and the graphite body in combination with stainless steel bearings makes for a salt and corrosion resistant reel. For extra durability the reel features a hard wearing stainless steel shaft. The retrieve ratio of 4.1:1 provides speedy pickup for retrieving line fast, yet is a sensible gear ratio for cranking in decent sized fish with ease. Designed to balance three-piece continental style rods and traditional fixed spool beachcasters in the 12 to 15ft range. It is the ideal partner to combine with Tronixpro Oceanik GT or TT rod. The reel is an 8000 size and comes with one aluminium spool and one spare graphite spool that holds 280m of 17lb line. To finish off the reel, it has a CNC machined handle with a tapered, rubberised knob that is grippy and comfortable in the wet and colder months.

- 8000 sized fixed spool
- Slow oscillation system for smooth line lay
- 5+1 Stainless Steel Ball Bearings
- Ideal for longer continental style rods

CODE	SIZE	BEARINGS	RATIO	WEIGHT	COLOUR
TPOFS8	8000	5+1	4.1.1	670g	Black
TPOFSS	8000	5+1	4.1.2	670g	Silver

TRONIXPRO

HANDLES

A range of universal handles designed to fit most multiplier reels from a whole host of different manufacturers. The double carbon handle will provide a slightly better balance to the reel as the weight is evenly spread across the handle. It also provides the angler the advantage of being able to drop onto a handle without looking. The power handle is ideal for the angler who has bigger hands, it provides a more comfortable way of winding in the reel, the extra length also improves leverage and so the efficiency of the reel.

CODE	DESCRIPTION	CODE	DESCRIPTION
TPEHD	Envoy Double Carbon Handle	TPEH6	Envoy Power Handle

TRONIXPRO HOOKS

We've teamed up with one of the world's leading hook manufacturers to produce a range of hooks to suit the needs of the modern sea angler. Launched in 2017, we chose our patterns carefully in conjunction with some of the best match anglers around, giving us a compact but highly effective assortment of patterns. All hooks are made from high carbon steel, the advanced heat treatment creates a fine grained, ultra-strong structure that increases strength by up to 30% compared to conventional tempering processes. A three-stage sharpening process which removes less metal from the point than standard sharpening methods, without diminishing sharpness, completes the hook point. This process ensures that the point won't roll over when it comes into contact with hard surfaces such as rocks, gravel and sand, it also won't lose weakness when immersed in saltwater for long periods of time. Tronixpro hooks have been designed to deliver dependable performance and reliability whatever your angling situation.

BIG DOG II

This short shank hook is an excellent choice when targeting larger species such as smoothhound, rays and tope. It is the ideal hook for using with softer crab baits and fish baits, its compact size allowing for a crab bait to be neatly bound on. A large eye allows for thicker diameter lines to be used when constructing heavier traces, it also adds extra security for keeping bait on the hook. The point is slightly offset and curves inwards towards the shank, this helps with hooking fish resulting in less false bites.

ABERDEEN

A classic hook pattern that has been part and parcel of sea angling for as long as anybody can remember. Our Tronixpro Aberdeen is a long shank hook made from heavy gauge, high carbon steel wire. It features a micro barb and a neat eye, coupled with its long shank it makes an ideal hook for worm baits. Suited to fishing for all manner of species it is a fantastic hook for cod, bass and rays in its larger versions and smaller fish such as flounder and whiting in the smaller sizes. The heavy gauge wire makes this a classic, all round pattern that gives species hunters the confidence to land big fish on smaller hooks. The longer shank and small barb make Aberdeen patterns easier for removing hooks from fish with minimal damage.

ABERDEEN MATCH

A fine wire, blued version of the classic Aberdeen hook. Ideal for all kinds of light fishing especially for targeting flounders, whiting and other smaller species. The hook features a long shank and small eye, the barb is slightly oversized so fish can't come off during the retrieve. The design of the hook lends itself to smaller baits and is the ideal hook for small worm baits, small mackerel slivers, sections of sandeel and neat crab baits. Due to the fine wire gauge, it is not recommended to use them when you're likely to encounter bigger fish amongst the smaller ones, with the standard Tronixpro Aberdeen more suited to this kind of work.

TRONIXPRO HOOKS

BAITHOLDER

A long shank hook that features small barbs either side of the shank towards the eye. These barbs are designed to help keep delicate baits such as worm and crab secure on the hook. The pattern is different to a traditional Aberdeen style hook, the bend of the hook is set at a more sweeping angle and the hook point faces inwards slightly. This is designed to help with hooking. Unlike traditional baitholder hooks, our Tronixpro Baitholder does not feature a beaked point, instead it has the same ultrasharp, three point sharpened straight hook point as the other hooks in the range. Baitholder hooks are ideal for fishing for flounders, whiting, dabs, cod, bass and any other species which are likely to be caught using softer, delicate baits.

NORDIC FINE WIRE

Another fine wired, blued version hook similar to the Aberdeen Match. The Nordic Fine Wire has a slight offset hook point, which turns inwards slightly towards the shank and a microbarb for enhanced hooking. It's an ideal hook for general shore fishing on clean ground when targeting whiting, flatfish, codling and other smaller species. The fine wire and small eye make it easier to thread delicate worm and crab baits on the hook. It is perfect for intricate presentations when fishing for those smaller species. A firm favourite of match and freelance anglers alike.

BEAST UPTIDE

A heavier gauge hook pattern that is ideal for heavy shore and light boat fishing. It features a wide gape and a shorter, medium hook shank that makes it ideal for big worm baits when targeting cod in the winter and for large fish baits too for rays and smaller conger. The wide gape is useful when preparing bulkier baits such as crab when targeting smoothhound or bass. The Beast Uptime is a popular pattern for fishing with a pannel style hook setup when targeting bigger fish. These hooks are bronze coated, allowing the hooks to rust out quicker if the fish breaks the line during the fight.

BEAST

A heavy duty gauged hook that is strong, designed for big fish from the boat and shore. This pattern is best used when fishing for bigger species such as conger, tope and smaller sharks. The long shank and wide gape makes it the ideal hook for fishing with whole mackerel and flapper baits when targeting big predators. This style also lends itself to presenting bigger squid baits such as whole squid, double squid or big mackerel, squid bait combinations when fishing for cod in the winter. A must have hook when you're targeting big fish on rock marks from the shore or when wreck and reef fishing on the boat.

WORMER

A thin wired, short shank, beaked hook that is a firm favourite of the species and the match angler. The short shank is ideal for presenting smaller baits well, the wide gape allows for presentation of a wide variety of baits from small, neat crab baits to slivers of fish. Although this hook is made from fine wire, it is also incredibly strong. The slightly bent eye positions the hook well for hooking fish and is ideal for both standard knotting and when using the knotless knot. When there is an element of doubt about the size and type of species you might encounter, but you need to cover all bases, these are the hooks to go for.

CHINU RING

A slightly thicker gauged hook compared to the Wormer. It has all of the same great features as the wormer including the wide gap and slightly turned eye. This is an ideal hook for when you are species fishing but think you might encounter powerful fish that could cause problems for a thinner gauged hook. Species that these hooks are ideal for are hard fighters such as bream, wrasse, bigger dogfish etc. The strength of these hooks makes them ideal for the boat species angler who needs to fish small hooks but have the confidence the hook can land a much bigger fish if required.

TRONIXPRO SWIVELS, LINKS AND CLIPS

We re-launched our Tronixpro Terminal Tackle range in 2017, with the aim to make the toughest links, clips and swivels on the market. After a painstaking round of field testing, we eventually launched what we believe to be the strongest, most durable terminal tackle range available for the sea angler today. We break test all of our terminal tackle frequently to ensure that the quality of each tackle item is the best it can be. In break strength tests we have found that our terminal tackle only starts to break at well above our quoted breaking strains. For example, our Casting Snap Swivels are rated at 35kg, yet break at 39kg. We found in our tests our terminal tackle was breaking at much higher breaking points than that of competitor products.

The range of terminal tackle has been designed to cater for the needs of all sea anglers. Tronixpro terminal tackle is trusted by the very best anglers in the world, anglers who depend on quality, strength and reliability in their terminal tackle. Their confidence in our terminal range ensures they have one less thing to worry about, allowing them to focus fully on their fishing, making them more productive to win championships at home and abroad.

ROLLING SWIVEL

A compact swivel where the tag ends of the eyes are encased in a cylindrical central body that provides strength and reduces the size of the swivel when compared to a standard barrel swivel. The compact central cylinder provides more efficient rotation when under heavy pressure reducing line twist and tangles. A reliable choice for attaching hook lengths and given its strength, for attaching rigs when casting heavy lead weights.

3 WAY SWIVEL

Based around the barrel swivel, the three way swivel features a third central eye that comes out of the main body. The three way swivel is useful for attaching a hook length to the middle eye with the mainline and lead coming off the first and second eye, a great choice when livebaiting. They are also useful when lure fishing, with the middle eye ideal for attaching a lead with the hook length to the lure coming off the second eye. A versatile swivel that can be used for all manner of fishing setups.

CRIMP SWIVEL

A quick and easy way to form snood swivels coming off the main rig body. They feature a long crimp that has a welded in raised section which the eye of a rolling swivel sits in. This means the angler can slide the crimp swivel down the rig body line and crimp in place without the need for beads and separate crimping. A really quick and simple way of rig construction when time is of the essence!

ROLLING SWIVEL / CLIP

Unlike inferior barrel swivel versions, our Rolling Swivel with Clip is based around our super strong, rolling swivel, which is rated at a breaking strain of 60lbs. These compact swivels are designed for making multi hook rigs that require clipping down to streamline the rig and to protect delicate baits. These swivels are popular with match anglers and allow for the construction of modern match rigs such as cascade and loop rigs.

HANGING SNAP SWIVEL

A super strong sized two rolling swivel which incorporates a hanging snap link. Ideal for attaching rigs to the shockleader when speed fishing and "double patting". Also useful in rig construction as a lead link and for forming running ledger rigs where the mainline passes through the eye to the hook length with the weight attached to the clip.

SAFETY SNAP SWIVEL

Based around our strong rolling swivel, the safety snap is often known as the American snap swivel. It has a multitude of uses in fishing. Ideal for boat fishing when attaching rigs and weights and in lure fishing for attaching lures and hooklengths for easy replacement. The American Snap is not as strong as its Coastlock and Interlocking cousins and is not recommended for use when power casting.

COASTLOCK SNAP SWIVEL

The boat anglers choice in terms of strength and reliability. Built around our strong rolling swivel, these links are the strongest we make. Made from heavy duty wire the sprung snap locks securely in place giving reassurance that it cannot come undone easily. Ideal for tying to your mainline for quick attachment of rigs when boat or shore fishing and when jig fishing.

INTERLOCK SNAP SWIVEL

Unlike our other links, this is based around a crane swivel which is machined to be one of the strongest and smoothest swivels around. Strong wire forms the clip which is bent at the end so it locks into the lock mechanism securely. They are ideal for attaching rigs, weights when boat fishing and also lures in their smallest sizes.

MINI SNOOD CLIP

Designed for the speed angler! These are a smaller version of the casting snap and have been designed to attach hooklengths quickly. Ideal for match anglers who want to have many ready tied hooklengths available to replace damaged snood line and hooks quickly. Also ideal for species anglers who use scaled down rigs for targeting very small fish down the side of structures or at very close distance with light tackle and light leads, where they can be used for attaching rigs and weights.

CASTING SNAP

One of the strongest casting snaps on the market with a breaking strain of 80lbs, a quality and reliable snap that can be used for power casting from the shore. Casting snaps can be incorporated into most beach fishing rigs as a lead clip and also for attaching to a shockleader for the quick replacement of rigs.

CASTING SNAP / CLIP

Built around the strong casting snap, this version features a looped over wire that can act as a bait clip. When used as the lead clip on a rig it can be used for all manner of rigs that require the hook to be secured close to the lead. Examples include up and over rigs, pulley rigs and standard one, two and three hook rigs. Used upside down, they can be used for hooking the lead on when using a weak link setup when fishing over rough and snaggy ground.

DOUBLE SNAP

A useful snap link that can be used for all manner of fishing and rigging situations. Handy when you want to have an initial or practice cast without a rig attached, simply slide it onto your swivel and then slide a lead on. The double snap can be used for attaching anything with an eye to another component with an eye.

QUICK CHANGE LINK

A quick, safe and ultra strong link that is ideal for power casting from the beach. The design locks the lead in place securely making it impossible to work its way out of the link once it is fastened in.

SMALL QUICK CHANGE LINK

The same as the quick change link but in a compact size. This link is half the size of its bigger brother and is ideal for anglers who want to make neater, more streamlined rigs and for anglers fishing with lighter rigs for smaller species. These links are also small enough to go through most beachcaster rings so they can be left attached to the mainline. Another use is as an alternative snood link. The link is also ideal for attaching lures for quick changing too.

SPLIT RING

Round split rings are used in a wide variety of fishing situations, made from stainless steel, these rings are corrosion resistant and perfect for saltwater applications. Ideal for use as jigging rings and for replacing split rings on pirks and lures.

OVAL SPLIT RING

The oval split ring is an alternative to the lead clip. Made from stainless steel it is corrosion resistant, it is also tapered, with the narrow end perfect for tightening knots against and the wide end used for clipping on weights. The split ring features an offshoot tag from the main ring that gives purchase to slide a lead on with ease. Perfect for attaching leads to rig bodies and for large lures such as pirks.

MINI OVAL RING

Similar designed to the oval split ring, this is a smaller version that has been designed to fit through the guides on rods. The small size allows it to be wound through the rings and kept on the reel for quicker setting up or for anglers who use different lines and need a quick way to replace their spool and get fishing. Its small size and strength make it perfect for using on the end of your shockleader for attaching rigs or as a lead link, when you want to streamline your rig further.

CRIMPS

Our crimps are made from soft brass, which makes them easier to crimp, with less force being exerted on the line the chances of line damage, often associated with crimping, is reduced. Allowing the angler to crimp away without worrying about any weaknesses in your rig body with a gentle squeeze with long nosed pliers. They're ideal for making paternoster rigs for trapping beads and swivels at points on the rig body. Available in three sizes, these crimps will fit most diameters of rig body.

RIG SPRINGS

Made from stainless steel, these rig springs are corrosion resistant, reliable and recommended for use on most clipped rigs. They take up the tension when the hook is placed in the bait clip which eliminates the premature releasing of clipped snoods when casting. When you continue to cast clipped rigs, eventually the hook snoods stretch, and the hooks no longer sit inside the bait clips as well, springs take out this tension and eliminate hook snood stretch, which increases the effective longevity of the rig. Essential for cascade and loop style rigs.

BAIT CLIP

A classic bait clip design made from strong, clear plastic. Fixed to the line with rubber tubing this bait clip can be slid up and down the line to adjust its location with ease. Helpful if the snood length changes for any reason. This movement can also help eliminate the problem of the bait clip being pulled out of the tubing during the cast. The wide gape of the bait clip makes it ideal for clipping up bigger hooks and baits.

PULLEY BEADS

Traditionally pulley rigs were made by using a standard swivel, this method was prone to breakages as the full force of the cast was placed on a very small area of line, constant casting could weaken the rig body making the rig break during the cast or when playing a big fish. By incorporating one of our strong rolling swivels into a plastic housing, the Tronixpro Pulley Bead spreads the load of a cast across a wider surface area. This eliminates damaging the rig body, producing a stronger, safer rig. Although designed for pulley rigs, it can be used for portland style rigs and also as a short boom when making one / two down style boat rigs.

CANNY LINK

Perfect for fishing over rough ground, this clever link combines as both a lead clip and weak link. During the rig construction the rig line is tied to the top of the loop and a section of weaker line is tied to the bottom of the loop, which is then tied to the weight. The weight is hooked onto the bottom clip and the hook is clipped into the top link. When the rig hits the water, both are released at the same time, providing a neat and streamlined rig. This allows the angler to fish a rig with a weak link to the lead to distance, perfect for when fishing over the rough stuff!

CONTINENTAL CLIP

A streamlined tangle free connector that ties to the shockleader for quick attachment of rigs or to the bottom of a rig for clipping on weights. These neat, compact clips will wind through most rings on beach fishing rods so the clip doesn't need to be removed at the end of a session. The link consists of open oval stainless steel wire and tubing. The tubing is slid up the mainline or rig line and then the stainless steel wire is tied on in the conventional matter, adding a rig swivel or the weight into the clip, the tubing is then slid down to secure it all. The tubing covers the knot which stops tangles. Ideal for continental style fishing and when using longer, lighter snoods.

BRASS BEAD CLIP

A small compact clip that is ideal for use when fishing with lighter lines. It features clear silicone that slots over the top of the main stainless steel clip which secures your rig swivel or weight in place. The addition of a small brass bead into the top of the silicone tube makes it easier to slide the tubing up and down the line with ease. It gives something to hold onto when fishing with intricate rigs. Its compact size makes it very streamline but also lightweight, which is important when fishing with lighter line rigs.

LONG BODY SNOOD SWIVEL

A longer version of our rolling swivel. The elongated centre makes the swivel stand off the rig body more which in turn makes the snood stand off further. This extra length in effect acts as a boom for a rig's hook snoods. It is only available in the smallest size and is particularly effective when using lighter lines and smaller hooks when searching for smaller species.

TREBLE SNOOD SWIVEL

Designed for match anglers and only available in a small size, this neat swivel acts as a mini rotating boom for hook lengths. This is ideal for using with lighter lines and smaller hooks, meaning these lines won't get tangles around the much thicker rig body line when casting or in a tide.

SNOOD CLIP SWIVEL

A neat little clip that will slot into any of our smaller swivels allowing the angler to quickly change their hook snoods with minimum fuss. Being incorporated into a swivel gives the hook snoods more movement and less chance of tangling compared to using a snood clip, which makes them ideal for use with lighter lines.

TRONIXPRO SWIVELS, LINKS AND CLIPS

CODE	DESCRIPTION	SIZE	BREAKING	PCS/	CODE	DESCRIPTION	SIZE	BREAKING	PCS/
TURF	Urfe	one	19Kg/42lb	4	TPGTL	Glue Tube	up to 70lb		150
TSTB3	Shrink Tube	3mm	Black	8	TPKP	Knot Protector	Clear		20
TSTC3	Shrink Tube	3mm	Clear	8	TPTRA	Glue Accelerator Spray	150ml	1	
TPTRG	Rig Glue	15ml		1	TPRIJ1	Rig Jig	-	-	1

URFE

Portuguese rigs are deadly, the concept of fishing with three hooks below the weight is an alien concept in shore fishing and one most people will think ends up in tangles! Our URFE has been designed to construct these easy to tie, often underrated rigs. The in built rig clip is hidden by a piece of tubing, slotting the lead in here and then moving the tubing over to secure, fixes the lead in place. To the opposite swivel the mainline is attached and to the middle swivel the rig is connected. The URFE allows for fishing longer rigs with longer snoods, giving the rig more movement, particularly effective when the fishing is slow.

SHRINK TUBE

A versatile product that can be used for all kinds of jobs within rig making. Shrink tube will "shrink" in place as heat is applied. This makes it ideal for protecting knots so that they become more streamlined and less prone to catching weed. The stiffness of the material when shrunk makes it ideal for creating small, standoff booms to give extra separation of hook snoods from the rig body. It's also used for making pannel rigs, securing the top hook of the pannel to the rig body. Care should be taken to not damage the line when heating, shrinking in hot water will help minimise this as opposed to using steam or a lighter, for example.

KNOT PROTECTOR

If using shrink tube to protect knots is a step to far, then the Tronixpro Knot Protector is the next best thing. Designed from clear silicone tubing, the knot protector will slide over the knot to the lead link, to the top rig swivel and the knot to the link on the shockleader. The supple silicone will keep the protector in place and is ideal for streamlining rigs to stop weed and lighter, longer hook snoods getting tangled in the knot.

RIG JIG

A specialist jig that is designed to make creating rig bodies quick and efficiently. It can be used for standard rigs with crimps but comes into its own when making glue rigs. At either end of the jig is a slotted, silicone material that features three slots, this allows you to position three rigs perfectly for applying glue or crimps. The soft, grippy silicone does not damage or kink the rig body. The jig has two countersunk holes, so it can be attached to a workbench or more elaborate rig jig setup. Using multiple rig jigs speeds up the rig making allowing the construction of multiple rigs. Using three for example allows the construction of three, three hook rigs simultaneously. This is the ideal tool for the match angler who needs to construct rigs on an almost industrial scale!

RIG GLUE

A general purpose rig making glue that can be used for many applications in rig making, especially when making "glue rigs". When constructing rigs or using glue in rig making super glue should never be used, it sets hard and can damage line. Tronixpro Rig glue does not set "hard" it retains elasticity to move with the fluid nature of rigs and does not damage line, plastic or other components. It will not compromise the integrity of the rig. Ideal for making glue rigs when used in combination with our Tronixpro Glue Tube and Tronixpro Rig Jig.

RIG ACCELERATOR SPRAY

A great addition to use with our Tronixpro Rig Glue, accelerator spray can be sprayed on knots, rig tubing or any other rig components that have been secured in place with our rig glue for instant setting. Rig glue can take up to two minutes to set, by which time components might have moved, using the spray sets them in place instantly. Also perfect for the mass rig maker, who needs to tie a lot of rigs quickly and waiting for components to dry, takes extra time out of their rig building schedule.

GLUE TUBE

Precut lengths of tubing designed for making glue rigs. The diameter of the tube will fit 50, 60 and 70lb line. Glue tubing is used in place of using traditional crimps and will not damage the line, like over crimped crimps can. By placing a small amount of rig glue on the line, sliding the tube up the line towards the glue will force the glue to be sucked into the tube, securing it to the line and making for a solid clamp. Using glue tube in conjunction with our Tronixpro Rig Glue makes for a stronger, safer way to secure snood swivels to rig body line.

TRONIXPRO BEADS

Tronixpro beads come in a range of colours and sizes. The mixed yellow and red beads are ideal for general rig making and general fishing. Smaller sizes make excellent stops between the crimp and snood swivel on a rig body. Larger sizes are good not only for attraction but for buffer beads, especially when boat fishing to put between a Tronixpro Zip Slider or Ledger boom and the swivel or link. Black and pearl beads are also available in one size only.

Our black and green mixed pack comes in an 8mm size only and is the ideal combination used for attracting plaice. Larger beads adding more visual attraction around your bait when drift fishing for plaice and at anchor.

Smaller sized clear round beads are ideal for placing between crimps and a snood swivel, especially when making glue rigs, they blend in well with the tubing and light line colours for a subtle rig arrangement.

ROUND PEADS PEARL

PINK OVAL BEADS

ROUND BEADS COLOUR

ROUND BEADS BLACK/GREEN

ROUND BEADS CLEAR

ROUND BEADS BLACK

LUMINOUS OVAL BEADS

A versatile bead that can be used for trapping swivels between crimps, glue tubing, rubber stops or silicone sliders. They can also be used on the hook length to add added attraction which works during the day and night. Giving these beads a quick blast from the Tronixpro UV Light brings them to life and adds extra luminosity. Available in both green and pink, they can be used as a single colour or as a combination of colours for extra attraction. Suitable for all species, especially inquisitive fish like gurnards, wrasse and flatfish.

SEED BEADS BLACK

Specialist microbeads that are only 1.5mm in size. These are perfect for making up light continental style rigs and rigs that use lighter rig bodies and hooklengths for smaller species. Given their size, they are streamlined giving the rig a minimal footprint when fishing for shy fish. They can be used with crimps, glue tube or just glue. We recommend either glue tubes or glue to match the delicate nature of the rigs these beads will be used on.

RUBBER BEADS

5mm streamlined rubber shock beads that are useful for giving protection to knots. Where a standard bead will eliminate most damage to knots on rigs, rubber beads add that little bit of shock absorbing that fully protects the knot. If a rig is likely to put a lot of pressure on a knot, then using a rubber bead will help protect the durability of the knots used. Rubber beads have the benefit of natural elasticity and combined with a good sized borehole mean the bead can be slotted over the knot for added protection in most cases. Rubber beads are useful for pulley, portland and running ledger rigs.

4 WAY BEADS

A fantastic bead to use when creating subtle, minimalistic rigs. Fantastic when using light lines in clear water. These beads feature a central hole through the middle of the bead and a hole running through the side of the bead. The beads can be positioned with the rig body line going through the longer hole keeping the snood close to the rig body or through the shorter hole which lays the bead on its side creating a boom. They are best used with a fluorocarbon snood line. Threading the line through the remaining hole and tying several figure of eight knots to create a line bulk secures the snood. For extra security a small, crystal or seed bead can be used between the 4 way bead and the figure of eight knot. Tronixpro 4 Way Beads are best used without crimps by using Tronixpro Rig Glue to either secure the bead in place directly or to use Tronixpro Rig Glue Tubing to act as a crimp either side of the bead.

PLAICE BEADS

A crystal, 8mm plastic bead that is not round but has flat sides, these flat sides capture light better than a round clear bead and reflect it back out. This creates flashes of light that are attractive to inquisitive fish such as plaice, making them home in on the bait. They can be used effectively on their own on the hooklength or can be intermixed with different coloured beads for maximum attraction.

TRONIXPRO BOOMS

CODE	DESCRIPTION	SIZE*	PCS/PACK

LEDM	Ledger Boom	M	3
PATM	Paternoster Boom	M	5
BBO*	Boat Boom	17cm, 27cm	2
LLR	Lead Lifts	Regular	2
TPPB16	Portland Pro Boom - Natural	160mm	3

TWIN SPREADER BOOM

Popular with boat match anglers, this 40cm double spreader allows for the presentation of two baits on the bottom, highly effective, this style of setup can be devastating. Ideally used when drift fishing over clean ground, it is a fantastic setup for catching hard to the bottom species such as flatfish and dragonets. Using short snoods will eliminate any tangles and keep the baits closer to the seabed for maximum effectiveness.

BOAT BOOM

A standard design boat fishing boom that is ideal for use with a running ledger or for down rigs. The boom keeps the rig away from the mainline and the lead meaning there will be less tangles. It is available in two sizes, a 17cm and a 27cm boom and comes fitted with a Tronixpro Interlocking Snap link for attaching a weight.

PATERNOSTER BOOM

A design classic that has been used in beach and boat rigs for years. This tough and slender boom is very effective from the shore where it is employed to keep light line snoods away from the rig body line when fishing for whiting and flatfish. It's also good for making light boat rigs and down boat rigs, especially for drifting when using more than one hook length. The boom rotates freely which reduces tangles and ensures the snood is working correctly in a tide. These booms can be fixed in place on the rig body with crimps and beads or by using glue tube and clear beads, their opaque colouring makes them ideal for the subtlety of a glue rig.

ZIP SLIDER

A clear plastic zip slider that is ideal for use on running ledger rigs from the boat or shore. The clear plastic design makes it discreet and when used in conjunction with clear beads or the Tronixpro Knot Protector offers a subtle boom arrangement for most down rigs. The zip slider will help to reduce tangles as it keeps the rig away from the lead. Zip sliders are ideal for the angler who changes tactics, zip sliders can be kept rigged up whether the angler is using a standard down rig where the lead is attached to the zip slider or passively, as the lead is attached to the bottom of the rig body.

CRIMP BOOM

For the angler in a rush, these quick fixing swiveling booms feature a crimp built into the boom itself, allowing for quick deployment to the rig body line. They are available in a 10cm and 17cm size and are ideal for many types of boat and shore rig that requires the use of booms. The wire used is strong and durable which will not bend under normal fishing circumstances. It features match style swivels to attach hooklengths. If required, anglers can replace the swivels with swivels of their choice by cutting away the shrink tube, sliding on their swivel of choice and then recovering the wire with shrink tube again. An easy to use, versatile boom.

WIRE BOOMS WITH SWIVEL

A traditional style wire boom that consists of a single metal wire that has been twisted into shape to form the complete boom. It features a swivel to attach the hook link and measures 100mm. This style of boom can be used in shore and boat rigs and helps to eliminate tangles and also offer good bait presentation. It is a good boom to use when fishing for flatties from the shore and also for bream and other shoaling species from the boat.

PORTLAND PRO BOOM

A versatile boom that makes fishing with longer hooklengths easier. Designed to be fished vertical with the boom top swivel attached to the mainline and the bottom swivel attached to the weight with the sliding bead attached to the rig. This allows the angler to fish with long rigs of 10 to 15 ft long, especially when fishing for turbot plaice and brill. This setup is also ideal for fishing with shads from a boat, effectively mimicking the Whitby rig setup. The boom can also be reversed so that it works horizontal, with the mainline attached to the end swivel and the rig attached to the opposite end with the lead rigged to the middle sliding bead, creating a semi-fixed sliding ledger boom, ideal for fishing with down rigs. A really versatile boom for a multitude of boat fishing situations.

MATCH BOOM

Designed for the match angler or the angler that needs a finesse presentation. These super fine stand off booms measure 20cm and are ideally suited to using light hook snoods, where they will reduce the amount of tangles. The boom of choice for light scratching rigs and for capturing shy fish when the fishing is difficult. Useful as a shore boom and on occasion as a boat boom when targeting small species over clean ground. The boom does not incorporate a swivel but one can be added by removing the shrink tube, sliding on a swivel and then replacing with shrink tube to secure.

LEDGER BOOM

A traditional style boom that is shaped triangular so that it sits in the tide to give improved presentation and bite detection. Its ideal for running ledger rigs, with the line running freely through the boom when a fish takes. It comes with a Tronixpro Interlock Snap Swivel for attaching a weight, such is the design, this can be replaced for a swivel or link of the anglers choosing to suit their situation. The design reduces tangles and is ideal for longer trace setups. A boom type that should be in every boat anglers box.

UPTIDE BOOM

A classic style boom that is designed for casting away from the boat. Ideally used when fishing uptide on a boat where the boom will help to eliminate tangles when casting, especially when using grip leads. Ideal as a light downtide boom for running ledger setups and down rigs. Each boom features a snap link for attaching a weight, that is strong enough for moderate casting from a boat.

LEAD LIFTS

An ideal way for lifting rigs away from snags when the angler retrieves their gear. Working much like an aeroplane wing, as the angler starts to wind in, the speed generated causes the lead lift to rise and force the lead to be retrieved away from the sea bed, minimising the potential for snagging when bringing gear back to shore. For best results, the lead lift should be fitted above the sinker. The lead lift includes a Tronixpro Oval Split ring for easy attachments of weights. Using a lead lift will result in reducing lost

TRONIXPRO RUBBER STOPS

BEADED SPREADER

A boat boom that is suited to targeting bottom dwelling fish. Designed to be used predominantly when drift fishing from a boat, the two booms keep two hook snoods away from each other and fishing in a straight line either side of the weight. The series of green and black beads adds visual attraction, which is important when targeting inquisitive flatfish such as plaice. Two small swivels on either end of the booms are ideal for clipping on hook lengths, giving the angler the option to quick change snoods as they see fit depending on the situation. These spreaders are fantastic when fishing for plaice, in conjunction with snoods that have been dressed in beads and blades. Spreaders are also useful when targeting smaller species with finer snoods and hooks, such as dragonets.

TRIPLE SPREADER

A rig designed for scratching over sand, ideal for use by competition anglers and species hunters looking to catch a large number and wide variety of fish. The boom consists of three metal booms which are linked together with flexible joints, the top boom is separated from the bottom two booms by a swivel, this allows the booms to move up and down independently of each other. The rig features two booms towards the weight end for fishing on the bottom, the two booms are at opposite sides to each other to eliminate tangles. The top boom is close to the top swivel to fish above in the water. This allows the angler to fish different depths to catch dabs, gurnards, whiting and a whole host of other species. A gentle jig will add extra attraction to the baits as they flutter, for further enhancement, snoods with luminous beads or coloured beads and blades will work well.

CODE	DESCRIPTION	SIZE
TPTS	Triple Spreader	1

CODE	DESCRIPTION	SIZE*	PCS/PACK
70133L	Rubber Stops	3L, 4L	1
70054L	Quick Rigs	4L	2

BLACK/COLUMN

Ideal for use as float stops when fishing for pollack, bass and wrasse from the boat or shore. They are streamlined and compact in shape and can slide up and down the line making them perfect for adjustable setups, they fit through rod rings so a float can be worked at any depth. They can also be used for light rig setups to trap swivels on paternoster rigs. They come on a metal spur which the line goes through to easily slide the stops onto the line.

QUICK RIGS

A complete solution on a quick application spur that makes making rigs a whole lot easier and quicker. Each quick rig consists of a rubber stop, two clear plastic beads with a swivel trapped between them and then another rubber stop. This gives the perfect snood swivel setup when making rigs quickly. For added security, extra rubber stops can be added to the mainline to make it harder for the snood to slide. Useful when targeting bigger fish. A neat idea with each quick rig coming in a set of three.

RUBBER STOPS

Available in both a natural and luminous version. They are versatile and can be used for all manner of applications on a rig. Single stops can be used as bait stops with the added advantage of extra attraction when using luminous beads. Single stops are also useful for trapping standard and floating beads on hook lengths, so they stay near the hook and bait. Bunching several stops together is a great replacement for crimps, giving an option to build adjustable rigs where the snoods can be moved up and down the main rig body line.

LUMINOUS

Our comprehensive range of attractors provides the angler with an extensive range of options to add colour and intrigue to their traces. Many species are responsive to fluttering, colour and sounds, investigative species will home in the movement produced by adding a blade or spoon to a rig. Other species will be attracted by the glow of a luminous bead or the audible rattle produced by a rattle bead or rattle spoon. Our pop-ups and floating beads allow baits to be suspended just off the sea bed, to greatly increase the chances of picking up a bite when fishing for species that don't necessarily feed on the bottom. Our full attractor range has the angler covered for all situations.

SEQUINS

Sequins are a useful addition to any rig makers box, they have a multitude of uses for making rigs and not just for attraction either. Sequins make ideal bait stops, with a wide flat side they are perfect as bait stops for worm, fish and even crab baits. Sequins are fantastic attractors, their flat, reflective sides bouncing light which creates a flashes and sparkles as they are wafted around by the tide. Our sequins are 6mm and come in two variations, a mixed colour pack including red, gold and silver sequins and a pearl.

PEARL SEQUINS

BLADES

Like our spinner blades but they come with clevises. Clevises place the blades further away from the mainline and minimise friction so the blades have a greater range of motion. They are slightly smaller than our spinner blades and come in two colours, a pearl and a red. They're deadly for flatfish and other inquisitive species such as gurnards find them irresistible too.

SPINNER BLADE

A classic spinner blade designed for adding extra attraction to a hooklength. These flat sided, thin blades will flutter and spin in the tide for both a visual and sound attraction. Spinner Blades are irresistible to flatfish and attractive to most inquisitive species. Blades can be placed on any part of the hooklength but are most effective when placed at the back of a series of beads.

FLATTIE SPOON

A traditional flattie spoon that is as effective today as it always has been. The flattie spoon has two, high quality swivels attached to it via stainless steel split rings. This setup along with the deep spoon shape makes it flutter and spin when worked in a strong tide or when on the drift from a boat. Flattie spoons can also be retrieved, slowly, adding extra visual and audible attraction to bring flatfish closer to the bait. Fantastic for use when turbot and brill fishing from the boat and hard to beat when fishing for flounders in estuaries.

MINI MUPPETS

Luminous attractors that are a perfect addition to a wide range of rigs. They can be added to snoods to sit over the hook, their luminosity attracting fish from a wide area to the bait. They are particularly effective when giving a short blast from our Tronixpro UV Torch, these give the muppets instant brightness that lasts for a sufficient time for a bait to be fully fished out. Great for the species angler that is looking for that extra edge.

SUPER SPINNER

Full of movement, this is the product to use when searching out inquisitive plaice when on the drift from a boat. Its design includes three, free spinning blades that spin and move in all directions when on the drift. The motion causes sand to be puffed up when dragged bringing in hungry fish from afar. Each blade is flanked by red and yellow beads for that extra bit of colour. Super spinners are excellent when the fishing is slow and can be used for all flatfish and other species attracted by movement.

DOUBLE RATTLE BEADS

A double bead that has small ball bearings inside that rattle around for attraction. Often too large to be used on a snood, they are deployed successfully on the main rig body itself, either near the weight or towards the top swivel. They are especially effective on ling rigs where the bead can be placed near the hook when using thicker diameter snoods. The constant rattle and "tick tick" of a rattle bead makes them great for adding to gurnard rigs too.

RATTLESPoons

A flat, spoon version of the rattle bead. Fantastic for attracting species that are inquisitive and are drawn to sound and visual stimulation. They are good for flatfish including plaice, turbot, flounder and brill. When added to a downtime drifting rig snood, they work well for gurnards, the constant tick being the ultimate attractor. They will spin much like normal blades and are light enough to be used on moderately light snoods, often working best at the back of a train of beads rather than closer to the hook.

LUMINOUS POP UPS

Our pop-ups are available in bright luminescent colour that is perfect for night fishing or when fishing in dark, churned up water or muddy water such as an estuary. They are available in 6mm and 8mm versions for different buoyancy levels depending on the hook and bait used. Use the Tronixpro UV light to really give these a luminescent kick!

LUMINOUS TUBING

A versatile product that can be used for a number of different applications when making rigs. It can be used to create small booms for snoods on paternoster rigs. It can be used as pennel tubing when making two hook pennel arrangements. It can also be used for protecting knots, added to and above hooks for extra attraction. Long sections can be used on snood lines or in between beads to increase attraction levels further. It's uses are endless

LUMINOUS TUBING (PINK)

TRONIXPRO ATTRACTORS

POP-UP

Our pop-ups are made from a buoyant material, giving them plenty of lift to raise bigger baits and hooks just off the deck. The lift they create ensures that baits can waft and move with ease with the motion of the tide, providing natural movement that fish find irresistible. They're excellent for targeting fish that feed off the bottom and are ideal for use in areas where crabs can be an annoyance, lifting the bait above the crabs reach. They are effective in summer and winter and attractive to all inquisitive species.

FLOATING ROUND BEAD

FLOATING OVAL BEAD

Super buoyant beads that are designed to float bigger baits and hooks. They're available in both round and oval versions. The oval versions come on a wired spur which helps with application to the line. The rubber stops are slightly bigger than other brands and should fit snood line up to 0.35mm. There are round versions available in the same colours to suit your preference, which are loose and not on the metal spur.

GLOW BALLS

A versatile, soft 8mm bead that is equally as attractive in the day time as it is at night. When fishing in the daytime they are brightly coloured just like a normal bead, when it turns dark, they turn luminous, sending out irresistible visual attraction to all inquisitive species. To give this an extra bit of attraction, we recommend using our Tronixpro UV Torch, which will boost their luminosity even further. These beads do not have a central hole like other beads, they are designed to be pushed onto the snood via the hook. This makes them grippy so they will stay in position on the snood line, allowing them to be placed wherever the angler wants. They are buoyant so they will add extra attraction and movement to the hook length via the motion of the water. Superb for suspending light baits just above the sea bed, a prime spot for picking up flounder and plaice.

FEATHER RIGS

Made from either solid or shredded tinsel or reflective material, these lures are fantastic for catching mackerel, pollack, coalfish and other predatory species. These are often accompanied by additional attraction such as a "hot head" where the whipping used is a striking colour such as lime green or red, or a luminous bead. These rigs come in a variety of different sizes ideal for mini species and small bait fish right up to larger fish.

SHRIMP RIGS

Like their hokkai cousins, shrimp rigs feature either a plastic body with additional feathers or ribbons attached or just simply a hook covered by a plastic body. The key to these rigs is often in their coloured or luminous bodies that emit maximum attraction for all manner of species. A favourite with species anglers, these rigs will often produce a wide variety of fish on just a single rig.

HOKKAI RIGS

Amongst the deadliest of all the attraction rigs, Hokkai rigs feature a plastic body that resembles a fish head with large hackles towards the bend of the hook in various colours. This combination makes them ultra-attractive to all types of fish, especially predatory fish such as pollack, coalfish, bass and cod. They are available in either a mini, standard or jumbo sized. The mini sizes are excellent all-round fish catchers for a variety of species. The standard sizes are good for general fishing with the jumbo sizes deadly for larger fish including ling.

EEL RIGS

These rigs use a long piece of tubing that is either luminous or of a specific colour. They can either feature tubing only as the attractant such as the Eel Rig or they can feature a feather too for added movement such as the Lumo Eel Rig. These are great rigs for catching cod, pollack, coalfish and wrasse. Luminous versions are fantastic for ling and conger when fished at the right depth. So deadly are eel rigs that a full string of good-sized fish is not an uncommon sight when fishing from a boat.

MUPPET RIGS

A big fish rig that is designed for cod, ling, big pollack and coalfish, often taking bass and even conger too. The muppet rig consists of large hooks with a plastic squid shaped attractor attached. The “muppet” comes supplied in various colours with brighter colours working well in clear water and luminous colours working well at depth and in dark conditions. The luminous version works well for ling when fished off the bottom and in mid-water and for conger when fished on the bottom. Black muppet rigs are excellent all-round fish catchers and can often single out the bigger predatory species when fishing for pollack and coalfish.

SABIKI RIGS

A favourite for anglers looking to catch bait fish and for the species angler. Their attractiveness and small hooks make these perfect for catching a wide variety of fish. Sabiki rigs mostly feature a reflective "fish skin" that can often be a reflective material, either solid or with intermittent silver, gold or other coloured flecks. These small, attractive rigs are deadly for mackerel, scad, launce and smaller, territorial species such as wrasse, gobies, blennies etc.

TRONIXPRO BEACH RIGS

In today's busy life there often isn't the time to be making rigs ready for a session, we know that feeling too, which is why we've produced our Tronixpro range of beach and boat rigs. Each rig is made to a standard design, the range covers the most popular rigs used by shore and boat anglers today. All rigs are made using our own range of components so each one features the ultra-strong, dependable range of Tronixpro Terminal gear and hooks. We use quality rig body and snood lines, so you can depend on these rigs to perform. They're great for beginner and advanced anglers alike and a good backup when you haven't had the time to make your own.

PULLEY DROPPER

Although not a pulley rig in the truest sense, the pulley dropper rig allows the angler to fish a long hook snood, when the rig hits the surface of the water the top clip detaches itself and allows the hook snood to flow away from the lead. Because the hook snood can slide up and down the rig body when a fish takes the lead will be above the fish and less likely to snag. The pulley dropper features a casting snap and can be clipped down to streamline a cast. The rig is also available in a pennel version featuring two hooks in tandem for fishing bigger baits.

PULLEY PENNEL DROPPER

PULLEY RIG

Designed primarily for fishing over rough ground for bigger fish, its design helps to minimise the loss of tackle and fish. When a fish is hooked, the weight of the fish pulls on the rig, moving the weight away from the seabed and up into the water column so it is free of snags before the angler retrieves. Our pulley rigs feature a casting snap with clip so the rig can be clipped down and streamlined for casting longer distances. The rig is also available in a pennel, version featuring two hooks in tandem for fishing bigger baits.

1HOOK FLAPPER

A simple, versatile rig that can be used from the boat or the shore. It is less prone to tangling due to only having one hook snood and is a favourite rig for anglers targeting flatfish, bass, cod and other predatory fish likely to be found in singles. Our range features a standard 1 hook flapper and also a clipped down version that has a casting snap with clip to streamline the rig for distance casting. The clipped down version comes with a rig spring below the hook snood to eliminate hooklength stretch and to keep snoods tight.

1HOOK CLIPPED

CODE	SIZE
1HC10	1
1HC30	2

TRONIXPRO BEACH RIGS

2HOOK FLAPPER

A simple rig that features two hook snoods coming off the main rig body. Two hooked rigs are fantastic at fishing both at close range and at long range, in their clipped versions. Two hook rigs give the angler the ability fish at different depths of the water column with one bait close to the seabed and one higher, or both on the sea bed when fished with a slack line. Two hook rigs also allow the angler to fish two different baits when hunting for a variety of species. Our two hook rigs are available either as a flapper or as a clipped down version for distance casting. The clipped down version comes with a rig spring below the top hook snood to eliminate hooklength stretch and to keep snoods tight.

2HOOK-1UP 1DOWN

A variation on the standard two-hook rig, this rig features the same two hook snood build but one hook length is attached to the rig body line just above the lead, whilst the second is placed higher up on the body closer to the swivel. This allows the angler to fish two baits at two different depths, one above the sea bed and one hard on the bottom. Useful for anglers who want to cover a variety of species both bottom dwellers and those that feed off the bottom.

2HOOK CLIPPED

2 HOOK LOOP

Designed as a distance fishing rig, the loop rig design allows the hooks to be placed behind the lead for maximum streamlining, it also allows for fishing with a much longer bottom snood to be fished, which is ideal when fishing for rays and flatfish. The use of a rolling swivel with a hook clip part of the way down the lower snood allows for this longer snood to be clipped in and streamlined. The top hook snood features a rig spring below it which keeps the rig tight and avoids any issues with hooklength stretch. This rig is available in either two or three hook versions.

FLATTIE FLAPPER

A two-hook flapper rig with extra bling designed for flounder, plaice and dab fishing. Each hook snood features a series of red and yellow beads and a red spinner blade. As the snood is affected by the motion of the water and tides the beads will shimmer and give off attraction whilst the blades will spin and flutter. These motions coupled with an appropriate bait make it irresistible to flatfish.

3 HOOK FLAPPER

A fantastic, all round rig that will catch a wide variety of species. The rig to go for when putting down a large scent trail and trying to catch a quantity of fish or when species hunting and wanting to try different baits and bait combinations. A great rig when match fishing for quantities of whiting, pouting, coalfish, pollack, codling and dabs. Not the best rig for range, but excellent at close to medium range. When fished in its flapper form, this rig is also excellent from a boat. The rig is available as either a flapper or as a clipped down rig for casting distance. The clipped down version comes with a rig spring below the top hook snood to eliminate hooklength stretch and to keep snoods tight.

TRONIXPRO BEACH RIGS

3 HOOK 2 UP 1 DOWN

A derivative of the three-hook flapper where one of the hook snoods is positioned directly above the lead. This gives the angler two hooks fishing in the water column at the top and middle of the rig body, whilst the lower snood is fishing directly on the bottom. Three hooks allow the angler to fish with multiple baits and to increase the scent trail to attract more fish and a wider variety of them. The different positions of the hook snoods give the angler a competitive advantage to cover different types of species, covering fish that feed off the bottom and those who fish directly on it.

3 HOOK CLIPPED DOWN

3 HOOK LOOP

WISHBONE BOAT RIG

A good rig to use when targeting flatfish especially flounder and plaice. The wishbone rig presents two baits close together to increase the scent trail around the hooks, it also gives the angler the ability to fish two different baits close together. This allows for fishing a fish bait next to a crab bait for example, to cover all bases. The hooklengths come with a series of coloured beads for maximum visual attraction, especially useful when fishing in estuaries and muddy areas where flatfish often reside.

2 DOWN BOAT RIG

A classic, flowing boat rig that comes equipped with 5/0 hooks designed for targeting medium to large species such as pollack, bigger coalfish, cod, conger and ling. To get the best from this rig it should be used where there will be water movement, to allow the trace to fully unfurl and not tangle. Fishing it on the drift and at anchor in a flowing tide will bring maximum success.

UPTIDE PENNEL RIG

Designed as a big fish rig to carry large baits. The pennel features two hooks close together, one is knotted to the main rig body line with the other hook loose on the rig body. This allows you to build up a large bait of worm, squid, cuttlefish, mackerel etc. that you wouldn't otherwise be able to build up on a single hook. The second hook also helps when targeting fish with big mouths such as cod. Uptide rigs are designed to be used in flowing water for maximum effectiveness and a Tronixpro Uptide Boom completes the rig to avoid tangles when casting and fishing.

TRONIXPRO BEACH RIGS

UPTIDE RIG

Similar to our Uptide Pennel Rig, the Uptide Rig is a long flowing rig that has been designed to be fished in flowing water, especially in regions where uptide fishing is the preferred method of fishing such as in the Bristol Channel. This rig features only one hook and is perfect for fishing medium sized squid, cuttlefish, mackerel, worm and crab baits. Designed for cod, bass, pollack, conger and other larger species. The Tronixpro Uptide Boom helps to keep the rig tangle free and the rig fishing at its maximum effectiveness at all times.

CODE	SIZE
TBUT60	6/0

GROUND RIG

A common running ledger rig that can be used for fishing for all manner of species in the sea. It comes with a larger 6/0 hook making it ideal for fishing for bass, cod, conger and ling. This long rig measures 2.4m, with the first 130cm being the “running” line area where a Tronixpro Zip Slider has been placed for the lead, the next 110cm of 60lb goes to the hook. This design acts as a bolt rig when fishing for larger species, with the zip slider eventually coming against a buffer, this sudden stop will bury the hook in the fish’s mouth to minimise fish losses.

CODE	SIZE
GRB60	6/0

BOAT FLAPPER

A common pattern that is used extensively by species anglers and anglers looking to catch a large amount of fish. Having two hooks allows the angler to use a variety of different baits, it also allows them to fish at different depths to cover multiple species. It has been built with our Tronixpro Rubber Stops which allows the rig to be adjustable, being able to move the hook snoods to different positions on the rig body line. Short shanked, beaked size four hooks have been used to maximise the rigs effectiveness for a wide variety of species including wrasse, bream, coalfish, pollack, gurnards etc.

CODE	SIZE
FRB4	4

PLAICE RIG RED/YELLOW

A classic long flowing trace designed for drift fishing for flatfish, especially plaice. The rig comes with size 1/0 Aberdeen hooks and features a series of beads on each hook length. The rig is available with either a red and yellow bead combination or a black and green bead combination. Both colours are highly affective for plaice, which feed using visual stimulation and are attracted by these two-colour combinations. Should be fished on the drift or at the very least in moving water for maximum effectiveness.

CODE	SIZE
PRR10	1/0

PLAICE RIG RED/YELLOW

CODE	SIZE
PRB10	1/0

SHAD RIG

A simple, long flowing rig that is designed for fishing over wrecks and rough ground with lures. Known as the flying collar rig to many, the rig utilises an anti-tangle boat boom to which a 240cm length of invisible in water 30lbs fluorocarbon line is attached. To the end of the fluorocarbon line, the angler can tie on their favourite lure. Popular lures to use with this rig include shads, eel style lures and worms. These rigs can also be used with a single hook and a fish or launce bait (live launce is best) for big pollack and bass.

CODE	SIZE*
SRB30	30lb

TRONIXPRO METAL LURES

Despite the rise in advanced modern lures, traditional metal lures are still fantastic fish catchers. Our range includes many classics, with modern twists. Our simple casting lures and bass wedges are great for catching predatory species from the shore including bass, pollack, garfish and cod. Lightweight spinners such as the Spinner and Tobi are proven designs when a lighter lure is required in salt and freshwater. A range of pirks completes the range for use on wrecks, rough ground marks and for big cod and halibut when fishing destinations like Norway.

CASTING LURE

A simple but effective lure that works equally well from the shore or boat. It is available in three different weights and six different colours to match any situation. Casting Lures as the name suggests are designed to be cast and are fantastic for species such as mackerel, garfish, bass and gurnards. Although designed to cast, the lure is also effective when vertical jigged and has proven a good catcher of cod when fished in this way from a boat both in the UK and in Norway. Each colour is formed from a highly reflective, holographic material which catches specs of light and shimmers for maximum attraction when retrieved or jigged.

WAVE PIRK

A deadly lure from the shore or boat, this lure features a unique swivel wire connection that runs through the top part of the jig to a hole that is drilled through the main body of the lure. This produces a different leverage point on the lure so when it is jigged, it imparts a more pronounced action. The action is further enhanced by the curved profile which gives this lure a unique and erratic movement that is irresistible to predatory fish. To add extra attractiveness, the lure has a holographic and chrome finish that flashes when moved through the water column. Outstanding for all manner of species including pollack, coalfish, cod and bass.

BASS WEDGE

A simple but highly effective bass lure that has been designed for casting ultra-long distances. Its streamlined shape lends itself well to cutting through wind and is ideal for use on the roughest of days. The wedge shape creates a fluttering and wobbling action that imitates a wounded fish, with the holographic finish that glitters and shines as it moves through the water. Fishes equally well with a steady retrieve and sink and draw methods, varying the speed of the retrieve and intensity of the draw can increase its effectiveness. As well as shore use, it can be used when jigging from a boat too. Comes in a variety of sizes to suit whatever fishing situation the angler faces either from the shore or boat.

CHROME BAR PIRK

A traditional style pirk that has been bringing fish to boats for years. A uniformed weighed pirk that is cut angular at either end. This angular shape gives the pirk a slightly erratic action that mimics a wounded fish. The larger pirks are ideal for cod fishing whilst the smaller pirks are good bass catchers, but also good off the shore too. Bar pirks are often used as the weight on a set of feathers, the flash created by them becoming a visual attractor to attract fish to the smaller feathers, it can also pick up a bonus larger fish when fishing for bait fish.

SPINNER

A lightweight spinner that is fantastic for catching mackerel, trout, perch and even sea trout and pike. This small spinner is formed around a metal wire, when retrieved through the water, the movement makes the spinner spin around the metal wire producing its action. This action can also be activated when fishing the spinner in fast, flowing water such as a stream or flooded river, allowing the spinner to come around in the water without retrieving when fishing for trout. Two red beads feature either side of the spinner to add extra attraction.

TOBI LURE

The classic fish shaped lure that has been a fish catcher since it was first conceived. Originally designed for salmon and sea trout fishing, the Tobi has become a legendary design that has lured predatory fish all across the globe. Our Tobi lure comes in one size and in a chrome finish, ideal for bass, trout, sea trout, salmon, perch and pike. If there is one lure that can guarantee a take even on the hardest of days, it has to be the Tobi.

NORWEGIAN PIRK

Designed to attract cod and halibut in the cold waters of Norway, this lure is equally effective when fished around the waters of the UK and Northern Europe. The curved body combines with an unequal weight distribution. The weight of the lure is biased towards the hook end. These two unique characteristics combine to produce an erratic fall when the pirk is worked. To get maximum hits when using this pirk, it is best to draw the jig up and then allow it to fall under its own weight. This is when most fish will attack the pirk with vigour. These pirks feature strong treble hooks and come in five different weights suitable for all depths of water and states of tide. Use baited for maximum attraction.

TRONIXPRO SQUID JIGS

SQUID JIG

More and more anglers are fishing for squid and cuttlefish, either to catch them as bait, for fun or to eat. These squid jigs are simple in design, they are unweighted and feature two rows of points to ensure if a squid attacks the lures, they will be caught. The jigs come in three different colours and feature a rough texture the catches the light when worked for maximum attraction.

SQUID HUNTER

A more advanced design of squid jig compared to our other lures. This squid jig is shaped in an S and features a small weight under the chin for a more pronounced action. The lure features two sets of points with a set that is more pointed and in number than our standard jig. The textured body makes sure the jig catches the various light points when being worked for full on attraction. These jigs are weighed and have an EGI rating of 3.5, which translates to a sink rate of 3.2s per 1m, a middle of the road weight for squid jigs.

FIRE TAILS

A plastic worm with an enticing curl tail that slashes and vibrates as it is retrieved through the water. The main body of each worm is black, providing a good, natural colour for the body that any fish will recognise. To give the worm that killer edge, a "fire tail" is added with a more pronounced colour. This tail acts as a target for any predatory fish, luring them in to take an irresistible bite as it is retrieved past them. The main body is ribbed to increase the vibrations the worm makes through the water. These worms are ideal for fishing over wrecks and across rough ground, fished on a shad/flying collar rig, also as part of a team of two or three when incorporated into a basic, but strong paternoster rig. Such is this rigs effectiveness it is known as "Killer Gear". A fantastic lure for cod and pollack.

CODE	DESCRIPTION	LENGTH	COLOUR*
SJ*	Squid Jig	7cm	P, B, G
TSH*	Squid Hunter	9cm	OR, BL, GR

WRECKERZ

A proven, shad style lure that works in both fresh and saltwater fishing scenarios. From the shore they can be cast out from rock marks in search of pollack and from surf beaches and rough ground when looking for bass. The paddle tail moves with a thumping action when retrieved through the water, which gives off irresistible vibrations and visual attraction for any predatory species around. Fished from a boat, they are deadly for cod, pollack and bass either fished on their own during small tides and in shallower depths or fished on a shad / flying collar or hopper rig when deeper and over wrecks and rough ground. Two shads on a hopper rig can be devastating when fishing for cod. In freshwater, these shads work well for catching pike and zander.

SLIM WRECKERZ

A new take on the classic design of the traditional rubber eel. These eels are 150mm in length. They come in six different colours with four of these colours opaque to reveal an attractive silver, holographic inner foil that maximises attraction. There are two solid colours, sunrise which is a yellow/red twin tone lure and a glow in the dark, green, mackerel version. Each lure is slightly weighted and can be fished on their own with a steady retrieve or can be hopped when fishing from a boat, in light tides and lesser depths. When fishing in deeper water, they can be fished on a shad / flying collar rig or on a hopper rig. They're deadly when fished over wrecks and rough ground for cod, pollack and bass.

IRONIXPRO FLOATS

Floats are a useful piece of tackle to fish for species that feed near the surface or when fishing off piers and structures. They're good for use when wanting to suspend live baits above rough ground or kelp when targeting bass and pollack. We produce a range of lures from casting lures that allow you to fish with float fishing setups at distance to standard cigar floats and bubble floats. Our rig floats give the angler versatility when fishing at distance and wanting to present a bait higher up in the water column.

CODE	DESCRIPTION	WEIGHT*
RFL	Rig Float	2.5cm
CAS*	Casting Float White	10g, 20g, 30g, 40g, 60g, 80g
FK*	Float Kit	12g, 18g, 35g
FL*	Loose Float	12g, 18g, 35g
BUB*	In-Line Bubble Floats	S, M, L

IN-LINE BUBBLE FLOATS

A clear plastic bubble float in three different sizes, weight can be added to the bubble float by filling it with varying amounts of water to aid with casting. Bubble floats are used extensively for live bait fishing for bass, where you can easily modify the distance between the float and the live bait to cover varying depths quickly. Bubble floats are also used extensively when mullet fishing, having the weight to cast delicate baits such as bread to distance and have them fish on or just beneath the surface. In freshwater fishing they're ideal for suspending baits under when targeting trout or perch on worms. Being clear, these bubble floats make excellent controller floats when fishing for carp on the surface or incorporating into an adjustable zig setup.

RIG FLOAT

A versatile float that is small at 2.5cm and designed to be incorporated into the design of a rig to pop it up off the sea bed. Perfect when fishing for species that feed up in the water columns such as mackerel, garfish and scad. It works well when fishing a sliding rig on the mainline, allowing the rig to be cast conventionally with the float making it rise through the water column once cast out, or to make the rig stand up vertically to truly fish multiple depths. These ultra-buoyant floats are also good for popping up bigger baits for fish that are feeding just off the bottom. In freshwater, they can be used to pop-up big fish baits for pike and zander in the winter.

LOOSE FLOAT

Cigar sea fishing floats in three different sizes, ideally suited to anglers who float fish with light gear for species such as mackerel, garfish, pollack and bass. Our floats are white on the underneath and a highly visual yellow on top, so you can see them clearly in most conditions. Perfect for fishing with small strips of fish baits for mackerel and garfish but also good for use when fishing for bass and pollack with bigger live baits such as joey mackerel and live sandeel. When fished in conjunction with the correct end tackle, they are perfect as an inline float when deadbaiting for pike.

CASTING FLOATS

A useful float that can be used in a variety of fishing situations. These heavy, EVA foam floats are ideal to cast out to distance, coming in six different weights, to suit different ranges and tackle setups. They are a great way to target fish who feed near the surface and are used extensively in washing line rigs when targeting garfish. They are also useful for live baiting joey mackerel or sandeel baits for bass and when fishing over rough ground with soft plastic lures, keeping the soft plastic working near the surface and just above the rocks. The plastic sight can be removed and fitted with a Tronixpro Light Stick for fishing at night.

FLOAT KIT

A complete kit for float fishing with traditional "cigar" style floats. The pack contains a float in either 12, 18 or 35g varieties, a rubber band to act as a stop knot and a ball weight to cock the float correctly. The float kit is ideal for anglers who wish to float fish with light gear for garfish and mackerel from manmade structures. The float kit can also be modified to fish with bigger live baits such as mackerel and sandeel for targeting bigger bass and pollack, just replace the hook for larger baits. A perfect pack when float fishing is the preferred method in summer for occasional and beginner anglers.

BLAZE FIXED SPOOL

Designed specifically for use with fixed spool reels and continental style surf casting rods. The combination of a reduced stretch line and a super slick silicone coating helps the angler get the very best casting performance from these setups. The reduced stretch also heightens the ability to detect bites at range, giving direct feedback on any activity at the terminal tackle end.

Featuring an advanced silicone coating that makes the line impermeable to maintain its full strength even when wet. This produces one of the most abrasion resistant, memory free lines on the market. The silicone coating also helps to prevent weakening from knots, making it one of the strongest and most dependable lines on the market.

The silicone coating also decreases the friction experienced when the line travels through the guides, this helps to increase the casting performance of the line, allowing you to achieve more distance with less effort.

- Blaze has less stretch, enhancing casting distances and bite detection.
- Unique Silicone Coating impermeable to water, ultra-strong with less friction.
- The coating makes the line abrasion resistant, ideal when fishing on rocks or snaggy areas.
- No matter which knot you use, the line will stay strong, reducing weakness that is naturally added when it is knotted.
- This limp, memory free line eliminates some of the problems introduced by line twist and general wear and tear. The memory free properties enable it to stay in top condition for longer, reducing the amount of times the line needs to be changed.

BLAZE MULTIPLIER

Designed specifically for use with multiplier reels and two-piece traditional beachcasters, Blaze Multiplier line offers the angler a consistent, high strength, performance copolymer mainline.

Blaze is produced by using a special blend of PA6 and PA12 polymers, combined these two polymers produce a line that has a high breaking strain but with minimum stretch. The line is supple and memory free making it excellent for handling and casting, it lays well on the spool of a multiplier reel and does not dig in, like some lines, increasing casting performance.

The process of blending two advanced polymers together gives the line a high knot strength and abrasion resistance tolerance too. This ensures that the angler can be confident in the lines knotting abilities, knowing it won't let them down in the face of a distance cast or when trying to land that fish of a life time. The high abrasion resistance makes it one of the most durable lines around when fishing around snags or when rock fishing.

Strict manufacturing processes ensure a consistent, durable line for maximum performance.

- Manufacturing process makes the line consistent for maximum performance.
- High knot strength and higher abrasion resistance make it a strong and durable line.
- Consistent profile and memory free line that sits well on a multiplier spool for increased casting distance.
- Minimum stretch for increased casting distances and feedback.

XENON MONOFILAMENT

Produced as a high end mainline for use on fixed spool reels and continental style surf casting rods. The combination of a reduced stretch line and a super slick, abrasion resistant fluorocarbon coating helps the angler get the very best casting performance from these setups. The reduced stretch also heightens its ability to detect bites at range, giving direct feedback on any activity at the terminal tackle end.

Xenon features a fluorocarbon coating that aids with abrasion resistance but also makes the line almost invisible under water. Fluorocarbon coated lines refract light similar to water, meaning it remains clear and almost invisible when immersed in water. The coating also makes the line almost impermeable, meaning it will retain full strength when wet.

Xenon's use is not limited to surf casting, it is a fantastic line for carp and specialist fishing too. The reduced stretch line makes it ideal for feeling leads down, giving anglers the direct contact needed to determine the kind of lake bed they're fishing over. This reduced stretch and coating lends itself to softer, more through action carp rods to aid smooth casting and distance. While the fluorocarbon coating adds abrasion resistance when snag fishing while helping with line concealment.

- Unlike standard copolymer lines, Xenon has less stretch, enhancing casting distances and bite detection.
- Fluorocarbon refracts light similar to water, making it clear and almost invisible under water, ideal when fishing light for shy biting species.
- The lines coating makes it extremely resistant when fishing amongst snags and rough ground. This is a dependable line that won't let you down.
- A combination of advanced technologies makes this an excellent line for knotting, no matter which knot you use, the line will remain strong, reducing weakness associated with knots.
- Although this line is abrasion resistant and features a fluorocarbon coating, it is still very supple, making it a beautiful line to use and cast.

TRONIXPRO LINES

XENON TAPERED MAINLINE

Due to the refined nature of continental style surfcasting rods, big, bulky leader knots often associated with heavy shockleaders can struggle to fit through the rings of the rod efficiently, which can hinder casting distances. Our Xenon Tapered Mainline provides a seamless, 240m stretch of mainline that runs from a 15lb running line through to a 60lb shockleader, without knots. This helps the line to flow through the rings more efficiently during the initial stages of the cast. Designed for fixed spool reels, tapered mainlines can also be used on multiplier reels, especially those with a level wind, when fishing in a conventional style with a two-piece beachcaster. The line is made from a tough and durable material but retains suppleness to ensure casting efficiency and to reduce line twists and tangles.

CODE	COLOUR	DIAMETER	BREAKING	LENGTH
BIT1	Clear	0.33-0.70mm	15lb-60lb	240m

XENON TAPERED SHOCKLEADERS

Made from advanced copolymer to create a strong and supple leader, each tapered leader is continuous and knotless, tapering from a mainline diameter to a thicker shockleader diameter, this taper enables the angler to tie neat, tight and compact knots when attaching a shockleader to their mainline. These compact knots lend themselves to anglers who fish with fixed spool and multiplier reels, when using a level wind. The smaller knots are ideal for fishing with continental style, surfcasting rods, many of which use smaller tip eyes than standard beachcasters. The smooth line flow created by smaller knots and a tapered leader can also help increase casting efficiency.

When shortened, our Xenon Tapered Shockleaders can be used by boat anglers who prefer smaller, tapered knots when fishing with braid to a mono leader. Available in clear for anglers fishing in shallow or clear water and in daylight and in orange for night time fishing and when the angler wants a visual reference of when the leader is close to shore.

WIRE TRACE LINE W/CRIMPS

A good quality, supple stainless-steel wire that has a multitude of uses in sea fishing. The wire is coated with nylon to protect fish and also to protect the wire from any excessive wear and tear. The wire comes in two breaking strains and is supplied with the correct sized crimps for making traces with it. The 50lb wire is good for making biting sections on traces for medium sizes species such as conger, spurdog and tope. The 100lb wire is useful when going for those bigger species such as bigger conger and medium sized sharks. It has been designed so that it doesn't kink easily and is more manageable than some other wire on the market.

BIT2	Natural	-	50lb	10m
BIT3	Natural	-	100lb	10m

BLACKOUT

An advanced, memory free line that is ideal for hook snoods, rig tying and leader building. Its memory free properties mean it won't twist or tangle making sure that snoods and leaders are always fishing correctly. It also helps to eliminate line twist when catching species like whiting and eels that tend to induce memory twist when retrieved. The memory free nature and line coating make it an excellent knotting line too, making it dependable when targeting almost any species. It is also excellent for tying boat leaders and as a hooklength when fishing with livebaits below floats. Not only is it a fantastic line for sea anglers but it is also a good quality, affordable line for fly anglers looking for shooting head and fly line backing. For carp anglers, Blackout is good for tying combi rigs, D-Rigs, booms and other carp rig variations.

X8 POWER

A super thin, durable eight strand braid that has been in development for the past two years. As an eight-strand braid it has an exceptionally low diameter, this is fantastic for shore anglers as it increases the casting efficiency of the line to reach further distances. From a boat, the lower diameter helps to cut through the water better, enabling the angler to fish with lighter leads at depth when faced with quicker tides. The round profile helps to load the braid onto the spool correctly, so it doesn't dig into itself, a common problem with braid. This reduces tangles and also creates less friction when casting. The braid is soft in nature making it easy to handle, yet this softness has not compromised the strength and durability of the line.

SHOCKLEADER

An advanced copolymer line that has been designed for shockleaders but also doubles up as an excellent rig body line too. The advanced makeup of the line makes it soft and supple which not only flows off the spool well but also increases its efficiency through the rod rings. This supple nature coupled with excellent abrasion resistance makes it a quality line choice for constructing rig bodies, it does not kink or retain excessive amounts of memory like some rig body material. It is a fantastic line for knotting, ensuring that when tied correctly, it will not let the angler down during a high-powered cast.

TRONIXPRO RIG WINDERS

Tronixpro were one of the first companies to introduce the humble rig winder over a decade ago. These simple but versatile EVA foam winders have been organising anglers tackle boxes, across all disciplines ever since. Rig winders are the perfect, organised storage method for any type of rig no matter how small. Each rig winder incorporates a small hole so a swivel or clip can be pushed in to secure a rig before winding it on to the winder. They come in three sizes, a slim, standard and jumbo, they're also available in a variety of colours to help with your organisation, allowing you to pick colours depending on the type of rig. Each box of ten rig winders comes with ten identification stickers to record rig type, line diameters, hook patterns and sizes on as well as ten T-Pins to secure each rig. A range of storage options are available including plastic boxes and lightweight, fabric winder cases.

ERWCASE	Eva Rig Winder Case	Holds 10 Standard	Black
FRWCASE	Full Rig Winder Case	With 10 Standard	Black

SLIM RIG WINDERS

The smallest of our rig winders these are 6.5cm in diameter and just 1cm in width. Idea for storing most standard rigs such as flappers, flowing traces, single hook rigs etc. They are also fantastic for storing our small attractor rigs such as our extensive sabiki range. The narrow width also doubles the number of rigs you can fit in our rig boxes to forty two. Slim winders are not only sea fishing exclusive, they can be used in fly fishing for storing made up fly leaders and in carp fishing for storing jig and surface fishing rigs.

JUMBO RIG WINDERS

The winder of choice for the bigger, bulkier rigs, especially handy for boat anglers. These winders measure 10cm in diameter and have a width of 2cm. They come in five different colours for better rig organisation. Our dedicated Tronixpro Jumbo Rig Winder Box has been designed to accommodate twelve of these winders. They are particularly useful for carrying rigs with large hooks and bulky components such as our Tronixpro Ledger Boom, Rattle Beads, bigger Rattle Spoons and rigs incorporating bigger muppets. They are also ideal for storing readymade lure fishing rigs such as shad rigs and rigs with Slim or standard Wreckerz tied on.

EVA RIG WINDERS

Our standard sized winder, 6.5cm in diameter but with a larger 1.8cm width. These are ideal to use for standard rigs but also for rigs with some bulk. Rigs with plenty of beads, blades, sequins, pulley rig beads and bigger hooks will all suit this type of winder. Twenty of these rig winders will fit in our Tronixpro Rig Winder boxes and they come in a wider range of colours compared to the rest of the winder range, with ten colours to choose from. This is the rig winder of choice for most anglers and is used extensively by top end match anglers and international teams.

RIG WINDER CASE

For the light travelling angler, this fabric case is ideal for carrying a modest number of rigs on rig winders for short sessions. Due to the compact size, it is also handy for the angler who carries a large number of rigs, in a light but organised way. The case is made from hard wearing fabric and features a velcro closure across the full length of the winder case. A handy lift tab makes it easier to open the case to get to rigs. AA clear plastic window allows for an identification label, so the contents of each case is known. Each winder case will carry 10 standard rig winders and up to 20 of the slim rig winders.

- A lightweight, fabric case for storing EVA rig winders for storing sea fishing rigs.
- Compact size that will fit in most tackle boxes and rucksacks with ease.
- Ideal for the angler who likes to be organised on a session.
- Clear plastic window allows a label to be used to identify the types of rigs in each case.

TRONIXPRO RIG WINDERS

RIG WINDER BOX

Tronixpro Rig Winder Boxes have been made exclusive for Tronixpro since the introduction of Tronixpro Rig Winders. They have been made to our exact requirements to perfectly fit our rig winders in the optimum configuration. Special attention was paid to the width and height of the box to allow easy removal of each rig winder. Each box is made from a tough and durable clear plastic for easy identification of what is inside. Standard boxes can hold 20 standard and 42 slim winders, whilst the Jumbo Box can carry 12 of our Jumbo Winders.

Although designed for our rig winders, many anglers use them for general tackle storage too, as they are the ideal size for storing clam shell boxes of bits and smaller snood line spools and accessories. Rig Winder boxes are stackable, with a specific raised plastic pattern on the top and bottom of the box which fits into each other.

They are available as a standard or jumbo box, with the standard also available fully loaded with 20 assorted winders.

JUMBO RIG WINDER BOX

FULL WINDER BOX

EVA RIG WINDER BOX

24PCS WINDER CASE

A high capacity rig winder box designed to carry a large amount of rig winders in a secure way. The box itself features two slide over catches to make sure the box is always securely closed. An incorporated handle makes it easy to grab the winder box from a tackle box, but also to carry rigs to the beach by hand. Internally the box can carry 24 winders (assorted winders supplied) and these are placed securely in specially cut grooves within the box. This style of box is a favourite of match anglers due to its capacity, durability and speed of use.

BAIT CAPSULE

The perfect way to cast big baits in a streamlined way! The Bait Capsule features a long tube with a grip lead build into it, larger baits can be placed in the tube and cast out, it's just like casting a plain lead. When the Bait Capsule hits the water surface, water is forced through small holes in the head of the Capsule which fills the chamber and ejects the bait. Not only is it fantastic for big baits but also for small, delicate baits too. Protecting softer baits such as crab, head hooked ragworm, maddies and even live baits such as sandeel. The design allows for the use of longer hook lengths too, which can be squeezed into the capsule for casting. It is always best to keep the hooklength slightly longer when fishing with a Bait Capsule, so that the bait isn't ejected early during the cast.

THE BIG RIG BITS BOX

Designed for the serious rig maker! This box isn't just one box, it is actually seven. The main box is divided into two, with one half containing six separate compartment boxes and the other half with 12 Tronixpro Rig Winders. The smaller compartment boxes are ideal for storing swivels, beads, rubber stops etc. Each box is different with compartments ranging from single to six for storing all manner of rig making components. When all of the rig winders have been used up, the second side becomes an ideal place to store rig making tools such as pliers, scissors and even small spools of snood line...or, you could just fill it with more winders! A cracking box for the dedicated rig making angler, and a good general-purpose box for keeping your tackle in or as an "away" box, so you can store all your bits and pieces in a handy package when travelling.

CODE	WIEGHT
TPBRBB	The Big Rig Bits Box

COMPONENT BOXES

Three component boxes that have been well thought out to avoid the frustrations often encountered with other makes on the market. Strong, durable clasps make sure the boxes are secure and won't come undone. An overlapping lid ensures that the box is water resistant and won't let unwanted water in to corrode the components kept inside. In addition, this helps to keep small components from working their way out! Each box comes with a set of dividers, so that each compartment can be customised in size to take a wide range of terminal accessories. A clever design makes the internal compartments rounded at the bottom, this makes taking small components out of the box easier, eliminated smaller items getting stuck in corners, which can prove difficult to remove. Lastly, each box is made from durable, clear plastic, so you can see exactly what it is inside without opening it.

TRONIXPRO TACKLE BOXES

BEACH SEAT BOX

Based on the popular Beta Box design concept, the number one beach fishing seat box preferred by the pleasure and match angler. This design has been the mainstay style of tackle box used by anglers for years. Due to this popularity, a number of accessories and modifications have been developed over the years, when professionally fitted, they can enhance the tackle box to be the ultimate in organisation and carrying capacity.

The design is lightweight but tough, taking the original line to a different level by using tougher plastic than previous versions of the box, increasing its longevity and making sure the tackle inside is protected.

Although we've called it a Beach Seat Box, it is a general-purpose tackle box too. This same timeless design is used by coarse and fly anglers, the perfect storage solution for all of their tackle and also a comfy place to sit during a session too.

The Beach Box comes with a comfy padded strap that makes life easier when walking long distances over a beach, it is also the perfect size to slide onto one of our Tronixpro Beach Trolleys. There are optional side trays available which are handy for storing bait and other close to hand accessories during a session.

- Tried and tested design used by thousands of anglers across the UK.
- Hugely popular, with a wide range of third-party modifications available.
- Tougher plastic makes this one of the most durable versions of the design.
- General purpose for all disciplines of angling.

BEACH BOX SIDE TRAY

BEACH SEAT BOX RUCKSACK

Designed as a viable alternative to conversion type systems for the Tronixpro Beach Seat Box and other Beta Box style designed boxes. Conversion type systems do require some effort to fit, becoming a permanent solution that cannot be removed once fitted. The Tronixpro Beach Seat Box Rucksack eliminates this, providing a solution that can be removed when needed.

The rucksack features a padded back section and shoulder straps, providing for a comfy fit when carrying a tackle box over longer distance. For anglers who don't like to use a rucksack and take their boxes everywhere with them, this is the perfect solution.

It has been designed to be practical, adding additional features that enhance the Beach Seat Box further. A reinforced carry handle on the back gives a handy way to move the box short distances when moving up and down the beach or around the boat. Multiple pockets at the front and the side increase storage capacity and are useful for storing extra accessories or personal items when fishing. Netted fronts to each pocket provide a handy space for hook snood material or tools that need to be at hand. The neat draw cord pocket at the side is great for storing a bottle of drink on longer sessions. Lastly, the waterproof seat ensures you're comfy when sat down.

SEAT BOX

A simple two-level tackle box that is ideal for both the boat and shore angler. The top half of the box opens independently from the bottom half and features separate compartments for organising tackle. This top half is perfect for storing often used items such as terminal tackle, hook, weights and line. The lower compartment is a large storage area that is good for additional tackle, rig wallets, rig winder boxes, reels and even spare clothing and food. There is an optional lift out Internal Tray that fits into the lower compartment of the seat box, this is hand to store any items likely to be used often in a session that won't fit into the top compartment. There is also an external tray that clips to the side, great for bait and storing close to hand items. An ideal, compact box for the shore or boat angler.

SEAT BOX RUCKSACK

Designed to be used in conjunction with our Tronixpro Seat Box, the Seat Box Rucksack features a well-padded back and shoulder straps to make carrying the box over long distances, more comfortable. Around the front and sides of the rucksack are handy, zipped pockets that are gusseted so plenty of gear of can be stored in them. These pockets are ideal for storing close to hand items and have meshed pockets too for storing spools of snood line. A waterproof seat completes the rucksack to ensure comfort throughout the session.

SEAT BOX EXTERNAL TRAY

LARGE SEAT BOX

A large capacity fishing tackle box that is perfect for the shore or boat angler who wants to take a large amount of gear on a session with them. It features two strong shutting clasps that keep the box lid secure and a strong carry handle to lift the box with one hand. It also has a carry strap that can be fitted for throwing over the anglers' shoulder. The box come with an internal tray that fits into the top of the box and covers half of it, so that the main compartment can still be accessed. There are also two clear boxes supplied that clip into the top of the lid for storing small accessories. The main compartment of the box features a lip of around 1 cm which the lid fits onto, this provides a water-resistant lip to stop water accessing the box. Perfect for the angler who fishes in adverse weather conditions or the boat angler whose box is likely to be on deck when underway.

SEAT BOX INTERNAL TRAY

TRONIXPRO TACKLE BOXES

BEACH TROLLEY

The Tronixpro Beach Trolley is a large capacity trolley that is quick and easy to setup. It has been designed to carry tackle boxes, bait and other accessories from the car to the fishing mark. Made from aluminium it is lightweight but incredibly strong, allowing the angler to load as much kit as required. It can carry large tackle boxes, bait buckets, clothes, cool boxes, pretty much anything needed for a session!

The Trolley will fold completely flat, allowing it to be stored in the boot of a car without it taking up too much space. Due to its construction from aluminium it is light in weight, so it is easy to take out and put back in the car and move around whilst loading. The retractable handle makes it easy to adjust the height for maximum comfort. To ensure the items can't fall off and to protect them too, the trolley is covered in a durable, sponge that is grippy and keeps items secure. This is also present on the top of the handle too, ideal when conditions are wet and cold.

The large, 18cm pneumatic wheels make this a go to anywhere loading trolley. Pneumatic wheels are more efficient at spreading the load of the trolley weight, so it can be used over sand, shingle, small rocks, piers and breakwaters. Designed to take the strain out of any long walk to a fishing mark and also for boat anglers, who are taking a large amount of kit to and from the boat.

Although designed specifically with the sea angler in mind, it isn't just restricted to that use. Pneumatic wheels make it the ideal trolley for the coarse angler to load their gear onto on their way to their peg. The large wheels make it the perfect, over ground trolley for wading through mud, over uneven ground and vast fields.

BEACH WHEELS

Designed for the Tronixpro Beach Trolley but can be universally fitted to any other type of trolley too, the base package includes an axle and two wheels, so is easy to fit to other trolley types. This is a serious upgrade to any trolley, giving the benefits of large, pneumatic tyres to carry weighted loads across a variety of different terrains.

The large, 18cm rubber wheels are filled with air under pressure. This pressure spreads the load efficiently, so the weight of the trolley is evenly spread over a variety of different surfaces. This is especially useful when carrying loads over a muddy field, soft sand or uneven ground.

Made from a strong rubber that makes them durable enough for use across most terrain types from sand, pebbles, shingle, small rocks, piers, breakwaters, roads, tracks, fields, gravel tracks etc. Although these tyres are ultra-tough, we'd recommend caution when using on very sharp stones or rocks.

TRONIXPRO MAX PACKS

Our Max Packs have been designed as an economical way for anglers to buy quality terminal tackle, in bulk. Ideal for anglers who like to make their own rigs, in bulk, whether preparing for a campaign, a match or a trip away. Each Max Pack contains our renowned set of terminal tackle components, which we relaunched in 2017. Each link, clip and swivel have been designed to be the toughest on the market, extensively field tested to be the strongest, most durable terminal tackle range available for the sea angler today.

We break test random batches of all terminal gear packs, ensuring our products break well above their quoted breaking trains. We found in our tests, our terminal tackle was breaking at much higher breaking points than that of competitor products.

RIG MAKERS BOX

A fully loaded ten compartment box which is filled with the most popular components used for rig building. We've selected ten must have items for any rig builder – ensuring the angler has everything they need, component wise, to build a wide range of common rig patterns. The box features beads, pop ups, sequins, crimps, links and swivels. The box itself is made from tough, clear plastic, that is ideal for storing all manner of tackle, it is also handy to be refilled with Tronixpro components when running short. Great for a new or returning angler starting out building their own rigs.

TPBXM	Baitex	Medium	1
TPBXH	Baitex	Heavy	1
TPBXB	Baitex Bracket	-	1

BAITEX & BAITEX BRACKET

A premium quality, bait wrapping material made from latex that is super stretchy and strong whilst being soft and fine. This helps to wrap up baits tight, conceal the bait wrap and means you use less too. This material is also perfect for snapping clean. With some traditional baiting elastics, it can take some real force to break the elastic, often degenerating bait presentation in the process. With a sharp, smooth tug, Tronixpro Baitex will snap clean each time.

Supplied on 300m spools, this is a larger spool than most other bait wrapping material. The stretch in the material means each spool of Tronixpro Baitex will effectively stretch out to more than double its original length, making it last substantially longer than most other bait elastic products on the market.

Each spool comes in its own canister, made from clear plastic and with three holes, one at each end and one at the side. The hole at the top/bottom is useful for when you are using the canister in your hand to wrap baits and is used for attaching the canister to the Tronixpro Baitex Bracket. The side hole is used when the Tronixpro Baitex Bracket is being used. A strip of Velcro surrounds the top and side holes, this is to lock the Baitex material in place after you've used it, eliminating the problem of elastic falling through a dispenser hole.

Available in three grades:

- **Light** – ideal for wrapping delicate baits such as mushed up prawn, small mackerel strips, small worm baits and shellfish.
- **Medium** – this is great for wrapping worm baits, bigger mackerel baits and sandeel. It is stronger than the light version but is still incredibly thin.
- **Heavy** – excellent for wrapping up big baits for long distance casting. Great for whole squid baits, mackerel fillets and multiple sandeel baits.

The Tronixpro Baitex Bracket is designed to hold your Tronixpro Baitex Canister in a multitude of convenient places. It is made from stainless steel and features a long wing nutted bolt for the canister and two bolts for attaching to a surface. Tronixpro Baitex can be attached to items such as a tackle box, a bait waiter, bucket, bait tray and even your rod rest for convenience.

BAIT ELASTIC

Essential for any angler who is fishing with soft baits or who wants to add extra security to their bait to stop it detaching from the hook. This bait elastic is super stretchy and soft whilst also being strong, it will keep binding with a constant hand motion, but a snap of the wrist will break it cleanly when the bait presentation is complete. It is available in three diameters. Fine is ideal for fishing with delicate small worm and crab baits, where you don't want to mask the bait with elastic, but still need a good hold. Medium is a good choice for general bait presentations to slightly bigger worm baits, small fish baits, crab baits etc. Heavy is the choice for binding on big crab baits, cuttlefish, bigger fish baits, squid etc.

BAIT ELASTIC DISPENSER

Although bait elastic is super strong and durable, it does begin to degrade when exposed to bait juices, rain, saltwater and of course, UV light from the sun. Overtime these elements break down the bait elastic making it brittle and weak. This can lead to premature snapping when baiting up or worse still, odd ends breaking off rendering the elastic useless. This strong, plastic container is made from opaque plastic and a click top lid. The opaque plastic helps to protect against external elements and also block out sun light. The click top lid features a centred hole, which the elastic can be run through so the angler can bait up without removing it. A simple but effective design to keep you bait elastic in top shape.

BAIT WEB

Featuring multiple translucent fibres, our Bait Web is fantastic for use on very fine baits, where standard elastic may show or even break a bait. These soft, multiple fibres bind to the bait and due to their spider web like makeup, they will disappear into the bait when in water. A great bait web to use when wrapping small soft baits such as peeler crab baits on a wishbone rig, small worm and fish baits and also for making up fine cocktail baits. The Bait Web comes in a plastic canister that protects it from the elements, ensuring that it doesn't rot and is in perfect condition to wrap baits.

IRONIXPRO CLOTHING

PRO CASTING GLOVE

A full, neoprene casting glove, designed to protect fingers from cuts when casting with low diameter lines and braid. This glove features a finger stall and protective neoprene that covers most of the back of the hand, the finger stall protects the casting finger while the hand cover helps to protect the back of the hand from any line slap. The glove is secured in position by a wrist strap that is closed using Velcro. This gives a secure, tight fit that ensure the glove cannot move or slip in a cast. Perfect for shore anglers casting low diameter lines with fixed spool reels and for carp anglers who are finding spots or spodding with braid.

LIGHTWEIGHT FISHING BOOT

A light, general purpose boot that is ideal for use when waders are not needed, and only shallow wading is required. Great for the boat angler who wants to keep dry, especially on a wet boat. The boot features a fixed, internal thermal liner that makes it warm in the coldest weather. The liner folds over the top of the boot to help ease any chaffing that might occur when worn. The boot also features a drawstring to secure it for longer walks. A hard-wearing outer PVC lining provides the waterproofing. The sole has been cut for maximum grip and is solid, making it ideal for use when fishing on rocks and around boulders. A great general purpose angling boot.

NEOPRENE BOOTS

A warm and waterproof boot that is ideal for the boat or shore angler when waders are not required. The boot is made from two materials, the top part is made from 4mm neoprene, which is waterproof and very warm. It is also flexible and soft which makes it ultracomfortable for wearing for long periods. The sole and ankle section is made from a hard-wearing PVC material that is durable and lightweight. The sole has been cut to provide a high grip on most surfaces, ideal for wearing for all manner of fishing situations and locations. A fantastic boot for the colder fishing in countries such as Iceland and Norway, they're lightweight, so ideal for popping in the suitcase.

FISHING SUIT

A lightweight, waterproof suit that has been designed to keep the angler dry in the worst downpour. It comes with a separate jacket and bib and brace, allowing the angler to use it as a multi-function suit, wearing the whole suit in a downpour, or just the bib and brace or jacket when required. The jacket will pack down easily enough to be stored in a rucksack or tackle box, ideal as a “just in case” waterproof jacket.

Designed to be fully waterproof to keep the worst weather out, the jacket features two side pockets to keep hands warm and dry with adjustable cuffs. The bib and brace have reinforced knee pads, so kneeling down when baiting up or preparing tackle is not an issue on any surface. Velcro and zip adjustments at the feet allow them to be put on when wearing footwear.

SEA SUIT

Made from tough, waterproof material, this is the ideal choice for when the weather is atrocious! In testing, anglers who have used these suits have commented on how good their rain repelling properties are. The suit is thermally lined and is ideal for winter use. While the waterproof outer is windproof, the fleeced inner will trap in body heat to keep the angler nice and toasty on the coldest of days. Designed for the beach and boat angler in mind. It comes with a separate jacket and bib and brace, allowing the angler to get multi-use from their suit. In the winter or when it is cold or raining, they can wear the whole suit or in the summer when they just want to keep clean, they can wear the bib and brace.

The jacket has waterproof lined pockets including one breast pocket and two side front pockets. These large capacity pockets are ideal for storing tools and accessories. The fleece lined, hand warming pockets keep hands warm and dry in the worst weather. The arms feature adjustable cuffs to stop water ingress and a full hood with neck warmer keep the worst of the weather out. A flap across the zip keeps water out. A reflective strip around the middle helps the angler be spotted at night, a useful safety feature.

Each bib and brace features two large external pockets for keeping accessories in, adjustable braces to achieve the best fit

CRIMPING PLIERS

A compact set of crimping pliers, ideal for storing in a tackle box or rig making kit. These pliers are made from drop forged high carbon steel which has been hardened and tempered for increased durability. To add further to the durability of these pliers, the crimping jaws have been coated in Teflon, this increases the stiffness and hardness of the jaws surface making them hard wearing and corrosion resistant, to give years of problem free crimping. The jaws have built in die sets to ensure accurate crimping of the smallest crimps right up to the largest crimps for shark and conger traces. The pliers are finished with hard-wearing, comfortable handle grips.

SIDE CUTTING PLIERS

A compact pair of cutters, ideal for cutting any kind of fishing wire and also higher breaking strains of monofilament. Made from drop forged high carbon steel and finished with a tough, durable and corrosion resistant Teflon coating, these plies are designed to last. They will keep their edge ensuring they are always sharp and won't rust, when in contact with saltwater. They incorporate a leaf spring to ensure a smooth operation and to keep the jaws open when positioning wire and line ready for cutting. The soft, textured hand grips ensure the handles are comfortable to use whether in the tying shed or out on the beach.

LINE CLIPPER MULTI-TOOL

A handy tool that is ideal as a close hand line clipper and knife. The clipper features a hole with which a lanyard can be attached to keep the tool either around a neck, secured to a belt or even railings on boats and fishing structures. The tool features a heavy-duty clipper for snipping monofilament lines such as snoods, leader material and mainlines. Also incorporated in the tool is a small, but sharp knife. This is ideal for cutting braid and any other material that the main cutter cannot deal with. Lastly, a rounded picker tool helps unpick knots and other general tasks an angler might face during a session. The lever is coarse for grip, making it suitable for use with wet hands and when it is cold.

DIAMOND HOOK SHARPENER

Sharp hooks can often be the key to converting bites into fish on the shore or boat. Our small, compact hook sharpener has been designed to offer a convenient tool for making sure hook points are at their top condition all the time. This rectangular hook sharpener has been made from a stainless steel base, which has been coated with fine, diamond particles which are securely bonded to the main frame. This gives a fine, gritty surface, perfect for sharpening hooks and even small knives and scissor blades. The main gritty surface is perfect for honing up larger hooks, whilst the grooved section is perfect for smaller hooks and refining hook points. It comes with a metal chain that can be attached to a keyring or other tackle accessories and even around the neck for quick access. A simple tool that can make a massive difference to the anglers catch rate.

BAITING NEEDLE

Good bait presentation can be the key to catching or not. Our baiting needles are the ideal tool to present a bait perfectly on the hook, designed primarily for worms, sandeels and soft baits. Each baiting needle is made from high grade stainless steel. One end is pointed to allow it to pierce a bait easy and the other end has a hole in it to place a hook point. Simply feed the worm on to the baiting needle, place the hook point in the hole and then slide the worm onto the hook for perfect bait presentation. Many match anglers will have multiple baiting needles setup to speed up the baiting process. Baiting Needles are available in a fine and a regular size. The fine is good for smaller worm baits that need to be fed onto smaller hooks. The regular is perfect for larger soft baits, larger worm baits, sandeels and when using larger hooks.

BAIT KNIFE

A short, four-inch, bladed, sturdy and ultra-sharp knife that has been designed for preparing fine baits. It is made from stainless steel, so it won't rust when exposed to saltwater and bait juices. It comes with a good quality handle that is grippy and a plastic sheath that clips onto the knife handle for security, the sheath also has holes in it to allow air flow around the blade when stored after use. The blade features a descaling tool, so you can scale any fish for bait or for preparing fillets. It is ideal for filleting bait fish such as mackerel and for preparing smaller baits such as squid and sandeel strips. Comes in black and orange.

FILLET KNIFE

A six-inch, ultra-sharp, flexible bladed filleting knife that has been designed for cleaning a catch after a fishing trip or preparing baits. The handle has been ergonomically designed to stop slippage when hands are cold, wet and slimy, with a contoured section for grip. It also features a small, metal hand guard between handle and blade, to help prevent hands slipping onto the blade. The blade itself is made from stainless steel, the flexible and strong blade makes it ideal for cleaning fish especially when filleting and skinning fillets. It comes with a full-sized sheath with belt loop, so it can be worn on a belt when fishing for ease of access.

FISHING LINE SCISSOR

A quality pair of stainless steel scissors that is ideal for cutting lines and preparing baits. The ultra-sharp blades are excellent for cutting most diameters of line and braid. These scissors have been a staple of the Tronixpro line-up for many years and have held up to the test of time. Many anglers own several pairs of these scissors across all their fishing kit. The ultra-sharp blades are great for general rig work and line cutting but also for preparing small baits too, better at cutting and shaping tiny squid and mackerel strips and preparing very small worm and crab baits.

TRONIXPRO TOOLS

FISHING LINE CLIPPER

A compact, handy pair of nippers that can fit on a key ring, around your neck or on a zinger for quick access.

KNOT PULLING TOOL

Designed specifically so the angler can easily pull knots tight and to check their strength too. The handle is designed in a T-shape so that maximum force can be placed to tighten down knots. The stainless-steel hook is the perfect size to go through the eyes of most swivels the sea angler will use, as well as clips, links and even within the bend of a hook. These tools make rig tying much easier and less trying on the hands, whilst ensuring your knots are properly bedded down and secure. Using two Knot Pulling Tools on either end of a hook length, rig body or line section, makes easy work of any rig.

FOLDING FISH RULER

A large fish measure that rolls up into a small, compact unit for storage and transportation. The hardwearing, easy to clean PVC measure rolls out to 120cm, allowing for measuring large species such as smoothhound and rays. At the beginning of the measure, there is a red upright which the head of the fish can be set against to ensure accurate measuring. The ruler itself measures in 1cm increments, with a colour system of grey lines to show 5cm and 10cm lines and orange lines to show 1cm gains in between.

BAITING TOOL

An innovative baiting tool that makes perfect bait presentation easy to accomplish. The tool features three spikes, two of which are sharp spikes and the third which is hollow. The two sharp spikes are used to slide bait onto, whilst the third spike is used to place the hook point. With all three in place, simply whip elastic around the hook and bait whilst on the tool and then slide the bait and hook off the tool, to have a well-presented bait. The tool is ideal for use with all manner of baits, especially soft, mushy baits such as crab and mussel. It is also fantastic for use with fish baits, and when making cocktail baits, helping to keep everything together whilst it is bound to the hook. The tool comes in medium which is perfect for most standard baits and in large, for when the angler is creating bigger specimen baits and cocktails. All prongs are made from stainless-steel, so they won't rust, the handle is heavy duty plastic that has been ergonomically designed to fit a hand properly and it comes with a push cap, to stop the prongs piercing anything it is stored next too.

FISH MEASURE

A rigid, tough and durable plastic fish measure. Available in three sizes from a small, compact 45cm to a 75cm and 100cm size. Each measure, measures in 1cm increments, and each line has the CM number on them at both the bottom and top of the measure. This is so that it is easy to identify the size of a fish, quickly, in a match fishing situation. The head of the measure features a large, red upright of just over a CM, with the Tronixpro logo, this upright is used to squarely place the fishes head so that you can get an accurate measure. The smaller ruler is ideal to be fixed to the top of a Tronixpro Beach Box, for quicker measurement. The measure is easy to clean after a session and can be wiped down or fully washed.

COASTERS

Offering the widest range of options, across different blank diameters, Coasters are the perfect fit for most beach anglers and are often the preferred choice for many. Our Coasters have been designed to offer the best value and most secure reel to butt connection around. Each Coaster is made from high grade stainless steel to prevent rust and corrosion when out on the beach. To save the anglers fingers, we've fitted a soft, durable sponge around the base of the band to protect fingers from cuts when casting and to add extra comfort in winter. Each screw has been designed with comfort in mind, providing plenty of grip to make sure the coasters are secure, even with cold hands. They are available in four different size bandings running from 24mm up to 33m, which covers most blank diameters in use.

SLIDING REEL SEAT

An adjustable reel seat that has been designed for the angler who doesn't like to use coasters. The reel seat is based on the popular DPS style of reel seat, it features a tongue in the centre of the reel seat that clamps down onto the blank when the reel is screwed into place. This gives a secure fit that doesn't twist under pressure. Available in two sizes for different blank diameters and can be used with both fixed spool reels and multipliers.

COASTER REEL SEAT

Our Coaster Reel Seat is designed for the angler who wants the convenience of a sliding reel seat but with the added security of a coaster to keep everything solid. The reel seat is based on the popular DPS design and features one Tronixpro Coaster which locks the reel seat in place on the blank. Using this system, the reel can be unscrewed from the rod, leaving the reel seat in position, securely. This is the reel seat that comes with most of our Tronixpro Xenon and Aphex range of rods. It comes in three different sizes to fit most blank diameters.

HOOK DISGORGER

A two ended tool that is designed to remove hooks from deep hooked fish. Made from tough, durable plastic that won't bend when applying force, the disgorger features two looped ends with openings to slot line and hooks through. Simply slide the line through the loop, run the disgorger down to the hook, with a sharp push, the hook will dislodge from the fish. A quick and easy method to remove hooks. The two ends of the disgorger are different sized open loops to cater for different sizes of hooks. It comes in both a large and a medium size. The medium is ideal for flaties, whiting and smaller species, the large will remove bigger hooks from fish like bass and cod.

FOLDING DROP NET

Required when fishing from piers and high walled structures to land fish. The drop net comes in both a standard and a large size depending on the type of fish the angler is targeting. The net folds away for convenience and for easy storage, it also comes with a length of rope so that it can be lowered down the structure to the water level to land fish. The rope is joined on each corner, so the net will always be brought up level so that a fish cannot escape. On one side of the net, a handle is present which closes up the net to secure the catch inside. The standard Drop Net is good for use with general species fishing and the large net is perfect for targeting larger species such as conger eels.

SEARCH HEADLAMP

Our main light, the Tronixpro Search has been designed for all types of night fishing. It features a powerful LED light which kicks out 400 lumens of power, ideal for both the beach and rock angler. The 400 lumens LED bulb gives plenty of light to pick out a path down to a fishing mark safely and helps when spotting objects in the sea in front of the angler that they might need to avoid. The powerful spotlight is ideal when fishing on rock marks or structures when needing to identify where the fish is before landing and picking a safe route to do so. The focus ring is metal and sturdy and built to last. It features an adjustable, elasticated strap and a battery pack that takes both standard AA and rechargeable batteries.

HEADLIGHT

Featuring a powerful LED bulb which throws out an impressive 160 lumens of power, this is the ideal light for the beach angler when night fishing as either a main light or backup. Giving you plenty of illumination to bait up, spot bites and highlight areas of the beach. An adjustable magnification ring allows it to go from a spotlight to a floodlight easily. The light also features motion sensors, allowing the angler to turn the light on by waving their hand in front of it, eliminating the need to fiddle around for the button when the light is needed. It comes with a fully adjustable head band, so it can be worn either around the head or over a beanie or woollen hat.

MULTI FUNCTION HEADLAMP

Our value light, which is suitable for beach anglers who are only using a low powered headlight for baiting up and checking for bites while night fishing. It features a single LED which is surprisingly bright. An elasticated, adjustable head strap makes for comfortable wearing. It takes three AAA batteries which give plenty of power, and longevity. For anglers in the market for a simple light or even a backup in case their main light packs up, the Multifunction light is ideal.

BUDDY/BOX LIGHT

A handy light to have in addition to any of our headlights. Ideal to be kept in a tackle box to illuminate it when preparing gear, tying rigs or baiting up. It also features a stainless-steel handle which can be hung on a tripod to light up an immediate fishing area, acting as a compact, but powerful basecamp light. The light also features a USB out connector, so it can be used as a mobile power bank to charge up a phone or other accessories. It comes with 3 x AAA batteries but can also run off a 18650 battery.

UV TORCH

With the use of UV and luminous attractors common place in fishing, this torch gives these attractors a massive boost. While luminous attractors such as Tronixpro Pop-Up Beads, Oval Beads, Muppets and luminous tubing will carry some illumination from natural light, giving them a boost can really make them stand out. This UV torch gives these attractors extra fuel to burn brighter for longer. Giving attractors a charge on each cast will ensure that they are burning bright for the duration they are in the water, instead of dying out half way through a cast. The UV Torch is also good for charging up some of the rod tips on our rods, including the Tronixpro Naga MX, which features a phosphorescent tip.

SINGLE QUIVER

Designed to carry up to three shore rods, an umbrella and a rod rest when travelling to a fishing mark. The quiver is made from a tough and durable 600D material, which is padded to make sure rods are fully protected. The reinforced base gives extra durability when placing it on sand, rocks and other sharp or abrasive surfaces.

The outside of the quiver features a large pouch which has been designed to carry a brolly, there are also straps with quick release buckles for securing a rod rest. The main compartment features Velcro straps to secure rods in place, it also has a near full length zip, so rods can be extracted easier.

A padded shoulder strap is fully adjustable, so it is comfortable to wear when moving to and between marks. There is also a well-positioned padded carry handle, so the quiver can be transported without slinging it over a shoulder.

DOUBLE QUIVER

For the angler who needs to carry a large amount of kit with them, the Double Compartment Quiver will carry up to four rods, plus a beach shelter and a rod rest. It has been designed to carry long items in one compact unit. Made from the same 600D material as our Single Compartment Quiver, it is fully padded and also includes a hard-wearing reinforced base to stop wear on abrasive and sharp surfaces.

The outside of the quiver features a large, oversized half pocket and a strap which a beach shelter can be placed into. It also features a pouch for a brolly and includes outside straps with quick release buckles for strapping a rod rest. The main compartment has a near full length zip to make removing rods easier and has internal Velcro straps to keep rods secure. An adjustable, padded shoulder strap makes it comfortable to carry and an additional carry handle can be used if preferred.

TRONIXPRO LUGGAGE

SINGLE RIG WALLET

Half the size of the Double Rig Wallet, this rig wallet has been designed for the angler who likes to travel light. Ideal for the roving angler or bass angler who doesn't need to take much kit and is using a simple selection of rigs. The wallet itself is made from 600D material which is durable and hard wearing. The wallet is closed using surrounding Velcro to stop any contents falling out, with pull tabs to make it easy to access the wallet. On the back of the wallet there is a full-length pocket ideal for spools of snood material and other accessories. Internally mesh pockets provide additional storage space. The rig wallets themselves are single compartments, see through and replaceable. They are made with hard wearing zip tabs, the ensure the contents are kept dry.

DOUBLE RIG WALLET

A large rig wallet designed to carry a multitude of different rigs and accessories. Made from the same hard wearing 600D material as the rest of our luggage range, the Double Rig Wallet has been designed to last. It is secured together using strong Velcro, so nothing can fall out, pull tabs make it easy to access the wallet. On the back of the wallet there are two pockets which are ideal for storing items such as snood line, tools and other close to hand accessories. Inside the wallet on either side is a large mesh pocket which is for additional storage. The plastic, zipped wallets are divided in two for maximising carrying capacity and can be easily replaced.

TRIPLE BOOM RIG WALLET

An innovative designed of rig wallet that boat anglers, especially have been crying out for, for years. This longer than standard rig wallet has been designed specifically for rigs made from booms. Ideal for storing short boomed rigs or rigs made with longer booms for flowing traces or for keeping spreader rigs stored neat and secure. The rig wallet is made from tough 600D material and is closed with Velcro to keep everything inside secure, with pull tabs make it easy to access the wallet. On the back of the wallet pockets allow for additional storage of snood lines, hooks and other accessories. Internally, there are long zip locked pockets that are replaceable, for storing those longer boom rigs.

REEL CASE

A quality, durable padded reel case made from 600D material. The Reel Case has been designed to accommodate both multipliers and the largest beach fishing reels too. It has extra padding around all sides so that reels are fully protected. The 600D material is robust and hard wearing. A strong zip covers three quarters of the bag allowing it to be fully opened for easy access. The zip also features a strong, rubberised Tronixpro branded tab to make it easier to use the zip when it is cold and wet. A fantastic all-round reel bag that will keep reels in mint condition when travelling from mark to mark or for storage at home. Each reel bag is designed to the right dimensions to easily slot into our Tronixpro Rucksack.

SPOOL BAG

Designed for the increasing number of anglers who are fishing with fixed spool reels. As more and more anglers are converting to this style of fishing, the need to fish with lines of different diameters to take advantage of a fishing situation is becoming more common place. In order to do this, anglers are taking multiple spools with them on each session. The Tronixpro Spool Bag has been designed to store spare spools in an organised and protected way. It is made from hard wearing 600D material and is fully padded throughout. It features moveable dividers so that the angler can optimise the bag to store any size of spool. In addition to holding spare reel spools, it is a good bag for storing spare spools of line, accessories and can even be used to store multiple, smaller, multiplier reels. A two-way zip covers three sides of the bag to allow for easy and practical opening. It features a rubberised, Tronixpro branded tab for easy use in cold and wet conditions.

COOL BAG SMALL

A handy sized cool bag that is perfect for storing bait for a short session. Slightly smaller than our Tronixpro Bait Paks, this is the ideal cool bag for the angler who is mobile and likes to keep their options open when fishing. The bag itself is made from 600D material which is tough and hardwearing, inside the bag all sides are foil lined and padded to ensure that the items inside, stay cool. For keeping baits at their optimum condition, we'd recommend using one or two thin ice packs. There is a double zip that runs around three sides of the bag so it can be opened fully. A padded grab handle on the side of the bag is designed so the bag can be stored upright in a bag or box to save space and be easily retrieved. Fantastic for small amounts of fresh bait and a couple of packets of frozen.

COOL BAG LARGE

Designed for longer sessions when the angler may have to take additional bait as well as food items and drinks. The bag is made from 600D material and is padded throughout. Inside, all sides are foil lined to maintain temperature to keep bait fresh and cool. This large capacity bag is ideal for storing bigger frozen bait items such as boxes of squid, fresh bait in trays and bait tubs and plenty of ice packs to keep it all cool. It features a two-way zip which covers three sides of the bag so the lid can be full opened. Strong, fabric, reinforced stitched in carry handles have been designed to carry a large amount of weight, so the bag can be fully loaded without worrying about it breaking. A great bag for carrying fish home after a session in prime condition too.

BUCKET COOL BAG

A round bag designed for our Bucket, Tray and Lid. It fits in either the top tray or in the bottom of the 27L bait bucket, it will keep bait fresh during a day's session. The bag is round and made from 600D material for durability, it is slightly padded and features an inner foil lining to keep temperature when storing baits that need to be kept cool. The outside features a double zip that almost covers the entire circumference of the bag, allowing it to be fully opened for easy access. The twin tabs are Tronixpro branded rubber and easy to grip with cold or wet hands. There is also a carry handle on the top of the bag, so it can be removed easily from the tray or bucket. The perfect accessory for the Bucket, Tray and Lid.

TRONIXPRO LUGGAGE

SAND SPIKE

Popular on the continent and in the US and Australia for years, a Sand Spike is the perfect, lightweight, rod rest. Our Tronixpro one has been designed for the beach angler who likes to fish light. The Sand Spike is light enough to strap to rods and simply takes one push to get it into the sand, before the angler is fishing. There is no need to adjust legs, screw in butt cups and rod rest heads, it is quick and easy fishing. The Sand Spike head features an open hexagon shape that secure the rod in place, it almost encloses the rod so that it can't bounce out in wind or when a big fish takes. There is an adjustable butt cup that can move up and down the Sand Spike so it can be positioned correctly for the rod and conditions. The sharp spike will work its way into sand and between shingle with ease. For the mobile, lightweight angler, it is the perfect rod rest.

BUCKET, TRAY AND LID

A quality, high capacity bucket that is ideal for storing bait and tackle. The lid snaps onto the bucket for security, it is also completely flat which makes an ideal surface for preparing baits on. Inside the bucket, there is a plastic top tray which can be lifted out. This is ideal for storing any close to hand items as well as bait, it also has handles to make lifting the tray out easier. The bucket itself has a large capacity and is ideal for storing all manner of baits. Some anglers use the top tray for fresh bait with the bottom of the bucket used for frozen baits. The bucket has a strong, stainless steel handle with a wooden hand grab for comfort. The ideal bucket for storing all manner of bait, tackle and even a few beers if needed! There is also a separate Bait Bucket Cool bag in the Tronixpro Range, which perfectly complements the Bucket, Tray and Lid.

DRY FEET BUCKET

A 10L capacity collapsible water bucket that has been designed to allow the angler to collect water safely from boat or shore. The bucket features a long chord which allows the bucket to be thrown into the water when fishing on beaches. It can also be lowered down when high up above the water from a rock mark, pier or breakwater. The bucket can then be dragged or lifted back up full of water. From a boat, the chord makes it easier to collect water safely without having to stretch over the gunwales to reach sea water. For the carp angler, it is a fantastic general-purpose bucket for cleaning after a brew up or for keeping water handy when landing a fish. The bucket collapses into a small unit that is ideal for packing in a rucksack or tackle box, the material used makes sure the bucket stays rigid when in use.

BEACH BROLLY SHELTER

The Tronixpro Beach Brolly Shelter is a 50in fishing brolly that has been designed for use by sea anglers. It is ideal for use on the beach or shingle for storing gear away from the elements. It creates the ideal base camp for baiting up, tying rigs or even making a brew! It features side flaps that keep the wind out of the brolly.

Made from a strong steel frame and featuring 210D fabric, which has taped seams throughout to prevent any water ingress. The 80cm down pole with a metal point is perfect for securing the brolly into the ground. It can also be setup Nubrolly style, which allows the centre pole to be removed and placed at the rear for an alternative shelter position, giving increased working space. The pocketed flaps around the sides can be filled with pebbles, sand or rocks to help give the brolly more security in high winds. For further reassurance, strategically placed D rings around all parts that touch the ground which can secure the brolly with T pegs and guy ropes.

It also comes with a fabric sleeve, made of the same material for storage which packs down to a size that can be easily stored in our Double Quiver Bag.

Although designed for the sea angler, the brolly is the perfect accompaniment for the coarse or carp angler too. In all black with a red Tronixpro logo, it will certainly stand out amongst the sea of green often witnessed at many a coarse or carp lake.

RUCKSACK

A high capacity well thought out, efficient and ergonomic rucksack designed for the shore angler. The large flat, durable, hard wearing base makes the rucksack free standing, it cannot roll or collapse. The top is also flat so that items can temporarily be stored on top of the bag - making it the ideal base station rucksack. It is made from 600D material which is tough and strong, ideally suited to the rough and tumble environment of sea angling on rock marks, piers, boulders, stones and coarse sand.

Internally there is one, large capacity, semi-rigid compartment, it is rectangular in shape, which is more practical for storing fishing tackle than a standard off the shelf rucksack. The main compartment is ideal for storing clothing, tackle boxes, reel cases, lead bags and anything else that might be needed on a session.

Four, large pannier pockets, two on each side of the rucksack have been designed to stand off the rucksack, so they can be filled with items without taking away storage from the main compartment. These pockets are ideal for close to hand items such as tools, rigs, terminal tackle and are strong enough to carry leads in too. On the front of the rucksack, two, stand-off pockets run the whole width of the main compartment and are large enough for storing rig wallets, tackle boxes and other larger tackle items. Each pocket is double zipped for convenience and comes with red pull cords and rubberised Tronixpro branded tabs for ease of use with cold or wet hands.

ROD WRAPS

A simple but effective product that makes sure rod sections are strapped securely together when on the move. Each wrap is made from a rubberised material that is elasticated so that they can be wrapped tight around any set of rods. One side of the strap is a grippy, rubberised texture to grip to the rod blanks, the other is a softer, felt like texture. The set comes with two straps, a wider strap that is designed for the lower part of each rod section. A narrower, strap features a slot in one end, this is for the tip section of the rod, with the slot sliding over any of the intermediate tip rings for a secure fit. They are available in both red and black and are the perfect solution to keeping rod sections together when travelling.

TRONIXPRO LUGGAGE

WIRE ROD WRAPS

Handy, wire wraps that can be used for all manner of things. They are fantastic for securing rods to railings when fishing on a pier or a boat, providing a little bit of extra security for the angler. They're also good for keeping rods together, strapping your rods to a rod rest and for generally keeping items tied together for transportation. Each wrap is made from a flexible piece of wire which is covered by a durable, grippy, soft sponge like material. The sponge helps to protect rods when they are wrapped together and when wrapped against railings etc. They come in sets of two and in five different colours.

SPOOL BAND

Many fixed spool reels either come with no line clip or a line clip that is too small for the diameter of line most anglers use for shockleader. This simple, elasticated Spool Band fits around any fixed spool reel spool to keep the line tidy and managed. Gone are the days of finding heaps of line wrapped up inside your reel case or spool bag. The perfect addition to any fixed spool angler's armoury, especially those who fish with multiple spools. The Spool Band features a tab end with the Tronixpro logo on, this helps provide an easy gripping point when removing the spool band. A simple, cheap, but well thought out product that helps eliminate line running off the spool when in storage.

MULTIPLIER WRAP

Suitable for reels in the 5500 to 6500 sized, this neoprene cover has been designed to fully cover multiplier reels when attached to the rod. The cover fully wraps around the front of the multiplier reel, underneath it has been cut out specifically to fit around the foot plate, so the underside of the reel is protected too. A Velcro strap secures the wrap around the base of the reel. On one side the cover is fully enclosed, whilst on the oppo-site side, the cover is open, this is to accommodate a reels drag, gearing and handle mechanisms. To keep this protected, a long flap can be wrapped over this area of the reel which attaches to the opposite side of the cover and is secured in place with Velcro. This strap is long and stretchy enough to fully enclose the reel, wrap around the rod butt and secure. Fantastic for anglers looking to protect their reels when on the move and also for boat anglers wishing the protect their reels from saltwater spray when steaming to marks.

FIXED SPOOL WRAP

A large neoprene cover designed to accommodate the largest of surf casting fixed spool reels. Developed to fully cover a fixed spool reel when it is attached to a rod, with the securing flap covering the rod butt and fixing into place with a strong Velcro closure. Ideal for placing over reels when transporting from venues, and a great addition to use when securing rods together using our Tronixpro Rod Wraps or Wrap and Strap. Also useful for covering reels when placing them into a quiver or rod bag for extra protection. With a growing trend of using high capacity fixed spool reels in boat fishing, the Wrap is great for protecting reels from saltwater spray when travelling.

WRAP & STRAP

A unique, lightweight rod sling that has been designed for the mobile angler. This simple but effective design can strap a couple of rods and a rod rest together with the two securing points at either end of the Wrap and Strap. A comfortable shoulder strap allows the angler to then put the wrapped-up rods and rod rest over their shoulder, freeing up their arms to carry other luggage items. Each of the end points has a very strong Velcro fastener to ensure that rods are kept secure when transporting. This is a fantastic, lightweight rod sling that is perfect for the rock hopping angler or when long walks are required to get to a mark. It is also perfect for the boat angler, allowing them to carry rods to the boat, freeing both hands for other luggage items. It packs down to a neat, compact package so it can be stored in a bag or tackle box during the session, out of the way. Carp and coarse anglers will find this an excellent alternative to a standard rod holdall, being lightweight and easy to grab made up rods from, it can make the mobile and stalking angler as efficient as possible.

REPLACEMENT ROD BAGS

Four rod bags designed to house a number of different rod lengths. Ideal for anglers who have either lost or damaged their existing rod bags. There is a rod bag cut for either three or two-piece rods in lengths ranging from 12 feet to 15 feet. For added security, there is a three-piece padded rod bag, ideal for continental style surf casting rods.

BAIT PAK

Made from 600D material and completely foil lined inside, our Bait Pak is the ultimate storage solution to keep fishing bait in top condition. The bag comes with a double zip which circles around three sides of the bag, allowing it to be fully opened for easy access. It comes with a heavy duty, sewn in handle making it easier to lift the bag out of your tackle box or fridge/freezer. Coming with Velcro, detachable straps and a series of sewn in loops, the bag can be securely fitted to the top of our Tronixpro Beach Box and other "Beta" box designs. This allows the angler to quickly access bait, but also frees up room in their tackle box for other items while having the bag mounted on the outside of the box. The foil lining inside will keep the temperature low, especially when combined with ice packs, keeping bait in top conditions no matter what time of year. Useful for shore and boat anglers alike.

LEAD BAG

Gone are the days of storing leads in bulk, impractical plastic boxes and ice cream tubs! The Tronixpro Lead Bag has been designed as a durable, proper solution for leads of all types and sizes. It is made from tough 600D material which covers a hard-plastic base and surround as well as a rigid plastic lid. Combining these two materials makes the bag ideal for storing both plain and wired grip leads too. The two-way zip surrounds three sides of the bag, so it can be opened fully to easily access leads, each zip has a rubberised Tronixpro branded tag for easy opening. On the top of the bag, a double stitched in handle makes it easy to lift the bag out of a tackle box or rucksack. The bag is the perfect dimension to fit in our Beach Box, Large Seat Box and Rucksack. Although designed as a lead bag, it is perfect for storing other tackle items too, several bags can create a fully organised system in any tackle box or rucksack. Designed for sea anglers but with multiple uses across all angling disciplines.
